[b] The amount specified may be used for one or multiple O-ring leak repairs. Do not multiply the refrigerant oil amount by the number of O-ring leaks being repaired.

Refrigerant Oil Adding for New A/C Compressor Installation

NOTE: Service A/C compressors are shipped without refrigerant oil.

1. Rotate the old A/C compressor shaft 8 to 10 full rotations (clockwise) while collecting the refrigerant oil in a clean measuring cup.
    - Add the same amount plus the amount collected during refrigerant recovery.

Refrigerant Oil Adding for New Suction Accumulator or Receiver/Drier Installation

1. Drill one 1/2 inch hole in the old suction accumulator or receiver/drier cylinder and drain the oil into a clean measuring cup.

2. Add the quantity of oil drained, plus the amount collected during refrigerant recovery and 60 ml (2 oz).

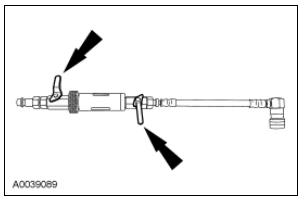
Oil Injection Using a Dye/Lubricant Injector

NOTE: If fluorescent leak detection dye is also to be added during A/C charging, the dye may be added to the dye/lubricant injector along with the refrigerant oil.

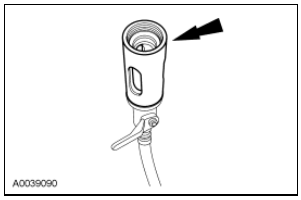
1. Evacuate the refrigerant system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

2. Assemble the dye/lubricant injector using the correct adapters to match the amount of PAG oil to be injected.

3. Verify that all the valves on the dye/lubricant injector are closed.



4. Fill the dye/lubricant injector with the correct amount of clean PAG oil.



5. Install the dye/lubricant injector between the low-side service gauge port valve and the refrigerant service station or manifold gauge set.

6. Open all valves and charge the refrigerant system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

Refrigerant Identification Testing

Printable View (17 KB)

Special Tool(s)

ST1457-A	Refrigerant Identifier with Air-Radicator 198-00003 or equivalent

Refrigerant Identification

1. **NOTE:** An A/C refrigerant analyzer must be used to identify gas samples taken directly from the refrigeration system or storage containers prior to recovering or charging the refrigerant system.

   Follow the instructions included with the refrigerant identifier to obtain the sample for testing.

2. The diagnostic tool will display one of the following:
   - If the purity level of R-134a is 98 percent or greater by weight, the green "PASS" light emitting diode (LED) will light. The weight concentrations of R-134a, R-12, R-22, hydrocarbons, and air will be displayed on the digital display.
   - If refrigerant R-134a does not meet the 98 percent purity level, the red "FAIL" LED will light and an alarm will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22, and hydrocarbons will be displayed on the digital display.
   - If hydrocarbon concentrations are 2 percent or greater by weight, the red "FAIL" LED will light, "Hydrocarbon High" will be displayed on the digital display, and an alarm will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22, and hydrocarbons will also be displayed on the digital display.

3. The percentage of air contained in the sample will be displayed if the R-134a content is 98 percent or greater. The diagnostic tool eliminates the effect of air when determining the refrigerant sample content because air is not considered a contaminant, although air can affect A/C system performance. When the diagnostic tool has determined that a refrigerant source is pure (R-134a is 98 percent or greater by weight) and air concentration levels are 2 percent or greater by weight, the diagnostic tool will prompt the user if an air purge is desired.

4. If contaminated refrigerant is detected, repeat the refrigerant identification test to verify that the refrigerant is indeed contaminated.

Contaminated Refrigerant Handling

⚠ CAUTION: If contaminated refrigerant is detected, DO NOT recover the refrigerant into R-134a recovery/recycling equipment.

NOTE: A new suction accumulator or receiver/drier must be installed as directed by the air conditioning system flushing procedure.

1. Recover the contaminated refrigerant using suitable recovery-only equipment designed for capturing and storing contaminated refrigerant only.
   - If this equipment is not available, contact an A/C service facility in your area with the correct equipment to carry out this service.

2. Determine and correct the cause of the customers initial concern.

3. Flush the air conditioning system. For additional information, refer to Air Conditioning (A/C) System Flushing in this section.

4. Dispose of the contaminated refrigerant in accordance with all federal, state and local regulations.

Air Distribution and Filtering

Printable View (9 KB)

NOTE: The air distribution system of this vehicle is factory equipped with a cabin air filter.

There are 2 sources of air available to the air distribution system:

- outside air
- recirculated air

Air distribution within the vehicle is controlled by the dual-zone electronic automatic temperature control (EATC) system in the AUTOMATIC mode, but it can be overridden by the driver if desired. Airflow mode doors are used to direct airflow within the evaporator and blower assembly and within the plenum chamber. Electrically powered mode door actuators are used to position the airflow mode doors. For additional information, refer to Section 412-00 for description and operation of each of the system functions.

Recirculated air can be selected by pushing the recirculating air button on the climate control assembly (EATC module). It may also be commanded by the EATC during AUTOMATIC and OFF modes. If the recirculating mode is selected in floor mode, the EATC module will automatically discontinue the recirculating air mode in floor mode, to reduce fogging of the windows.

Air enters the passenger compartment from the:

- instrument panel registers.
- floor duct.
- windshield defroster nozzle.
- side window demisters.

Passenger compartment air is exhausted from the vehicle through open windows or luggage compartment air vents.

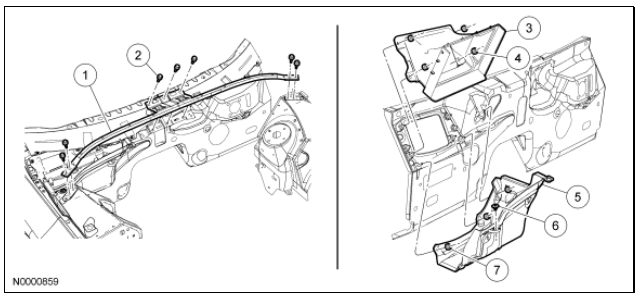
Air Distribution and Filtering

Printable View (7 KB)

Refer to Section 412-00 .

Fresh Air Inlet Duct

Printable View (106 KB)



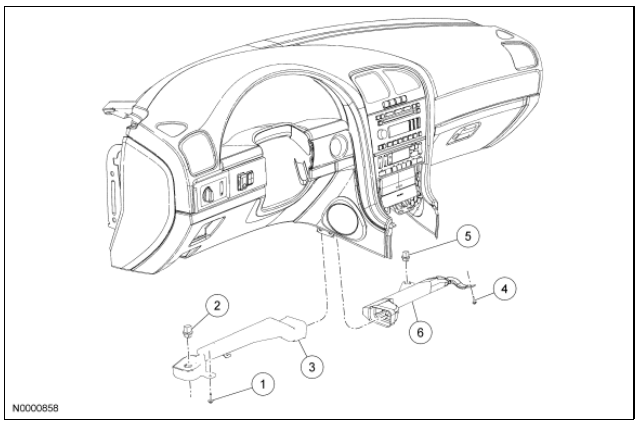
Item	Part Number	Description
1	3B336	Engine compartment brace
2	W705551	Engine compartment brace bolt (7 required)
3	01934	Fresh air inlet duct
4		Fresh air inlet duct nut (4 required)
5	016A50	Fresh air inlet duct insulator
6		Fresh air inlet duct insulator pin-type retainer
7		Fresh air inlet duct insulator nut (3 required)

Removal and Installation

1. Remove the cowl vent screen. For additional information, refer to Section 501-02 .
2. Remove the cabin air filter.
3. Remove the 7 engine compartment brace bolts.
4. Remove the engine compartment brace.
5. Remove the 4 fresh air inlet duct nuts.
6. Remove the fresh air inlet duct.
7. Remove the fresh air inlet duct insulator pin-type retainer.
8. Remove the 3 fresh air inlet duct insulator nuts.
9. Remove the fresh air inlet duct insulator.
10. To install, reverse the removal procedure.

Floor Duct

Printable View (93 KB)



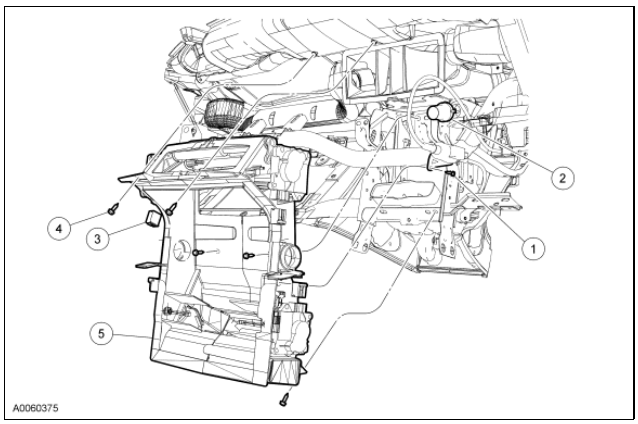
Item	Part Number	Description
1	W704875	LH floor duct screw
2	14401	LH courtesy lamp socket
3	19B680A	LH floor duct
4	W704875	RH floor duct screw
5	14401	Courtesy lamp socket
6	W704875	RH floor duct

Removal and Installation

1. Remove the lower instrument panel insulators.
2. Remove the LH floor duct screw.
3. Detach the LH courtesy lamp socket.
4. Remove the LH floor duct.
5. Remove the RH floor duct screw.
6. Detach the RH courtesy lamp socket.
7. Remove RH floor duct.
8. To install, reverse the removal procedure.

Plenum Chamber

Printable View (137 KB)



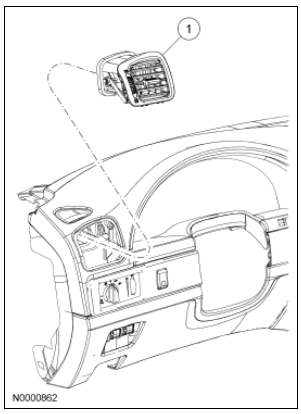
Item	Part Number	Description
1	W701696	Shift interlock actuator screw
2	19E628	Aspirator tube
3	14401	Actuator electrical connector (3 required)
4	W701696	Plenum chamber screw (5 required)
5	19C698	Plenum chamber

Removal and Installation

1. Remove the instrument panel. For additional information, refer to Section 501-12 .
2. Remove the shift interlock actuator screw.
3. Disconnect the 3 mode door actuator electrical connectors.
4. Remove the 5 plenum chamber screws.
5. Remove the plenum chamber.
6. To install, reverse the removal procedure.

Register Driver Side

Printable View (59 KB)



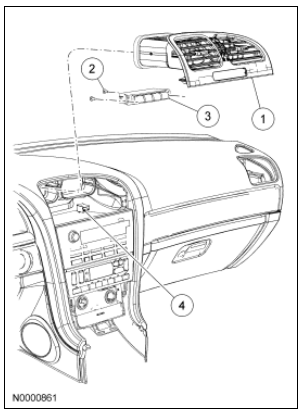
Item	Part Number	Description
1	19893A	Driver side register

Removal and Installation

1. Using a flat screwdriver to depress the tabs, remove the driver side register.
2. To install, reverse the removal procedure.

Register Center

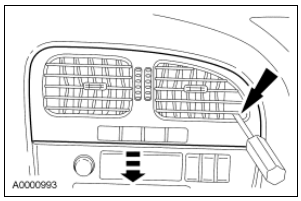
Printable View (96 KB)



Item	Part Number	Description
1	19893A	Center register
2	W704874	Message center switch screw (2 required)
3	19D996	Message center switch assembly
4	14401	Message center switch electrical connector

Removal and Installation

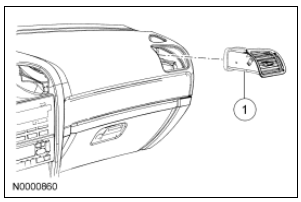
1. Insert a mini-pick in the pocket and pull the register from the instrument panel.



2. Disconnect the message center switch electrical connector.
3. Remove the 2 message center switch screws.
4. Remove the message center switch.
5. To install, reverse the removal procedure.

Register Passenger Side

Printable View (30 KB)



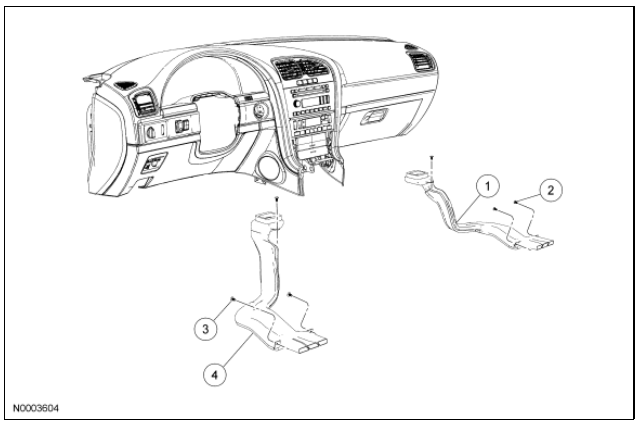
Item	Part Number	Description
1	19893B	Passenger side register

Removal and Installation

1. Using a flat screwdriver to depress the tabs, remove the passenger side register.
2. To install, reverse the removal procedure.

Rear Footwell Duct

Printable View (75 KB)



Item	Part Number	Description
1	18C420	RH rear footwell duct
2	W705589	RH rear footwell duct pin-type retainer (3 required)
3	W705589	LH rear footwell duct pin-type retainer (3 required)
4	18C420	LH rear footwell duct

Removal and Installation

1. Remove the front seats. For additional information, refer to Section 501-10 .
2. Remove the RH and LH lower cowl trim panels.
3. Remove the RH and LH front door sill plates and position the carpet away from the rear footwell ducts.
4. Remove the 3 LH rear footwell duct pin-type retainers.
5. Remove the LH rear footwell duct.
6. Remove the 3 RH rear footwell duct pin-type retainers.
7. Remove the RH rear footwell duct.
8. To install, reverse the removal procedure.

Heating and Ventilation

Printable View (9 KB)

The heating and ventilation system:

- controls the vehicle air temperature and, during A/C operation, reduces the relative humidity of the air inside the vehicle.
- delivers heated or cooled air to maintain the vehicle interior temperature and comfort level.
- allows temperature to be adjusted individually by the driver and the passenger to maintain comfort.
- uses a reheat method to provide conditioned air to the passenger compartment. All airflow from the blower motor passes through the A/C evaporator core and the heater core. Temperature is regulated by reheating the air out of the evaporator core to achieve the desired temperature.
- controls the air temperature by regulating the flow of engine coolant to separate halves of the heater core. A dual solenoid actuated valve is used to control the flow of coolant.

The blower motor draws outside air through the air inlet filter and duct or draws recirculated air through the recirculated air duct.

Heater Core

The heater core consists of fins and tubes arranged to extract heat from the engine coolant and transfer it to air passing through the heater core. The heater core is separated into two sections. Air passing through one section is directed to the driver side of the vehicle, while air passing through the other section is directed to the passenger side of the vehicle. The heater core has separate inlet ports with a common outlet port.

Blower Motor

The A/C blower motor pulls air from the air inlet and forces it into the evaporator housing and plenum assembly where it is distributed.

Dual Coolant Control Valve

The dual coolant control valve regulates the flow of engine coolant to each half of the heater core. Two electric solenoids, which are individually actuated by the dual-zone EATC module, are the control elements. Based on inputs from the dual-zone EATC module, the solenoids cycle open and closed to regulate the coolant flow to the heater core. The solenoids can be cycled at different speeds by the dual-zone EATC module in order to maintain different temperatures for each half of the heater core. Under certain conditions when heating is not required, the dual coolant flow valve will bypass the heater core by closing both solenoids.

Auxiliary Water Pump

Vehicles equipped with a 3.9L engine are equipped with an auxiliary water pump. The auxiliary water pump is electrically driven and provides increased coolant flow during low engine speed operation. The pump is also used to circulate coolant after the engine is turned off under certain conditions.

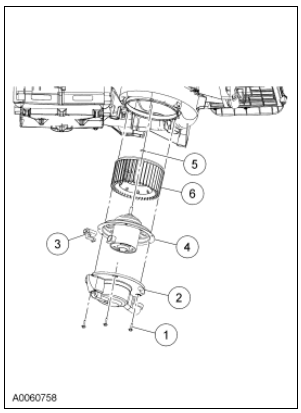
Heating and Ventilation

Printable View (7 KB)

Refer to Section 412-00 .

Blower Motor

Printable View (37 KB)

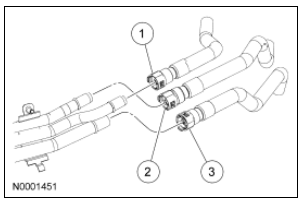


Item	Part Number	Description
1	W705314	Blower motor screw (3 required)
2	18515	Blower motor cover
3	19D887	Blower motor electrical connector
4	19805	Blower motor
5	18A287	Blower motor wheel clip
6	18504	Blower motor wheel

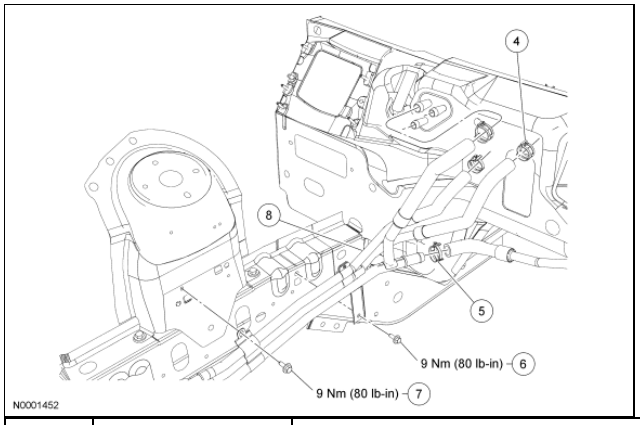
1. Remove the RH floor duct.
2. Remove the 3 blower motor screws.
3. Remove the blower motor cover.
4. Disconnect the blower motor electrical connector.
5. Remove the blower motor.
6. Remove the blower motor wheel clip.
7. Remove the blower motor wheel.
8. To install, reverse the removal procedure.

Heater Hose

Printable View (131 KB)



Item	Part Number	Description
1	18N345A	RH heater hose
2	18N345B	LH heater hose
3	18472C	Heater outlet hose



Item	Part Number	Description
4	8287	Heater core hose clamp (3 required)
5	8287	Bypass hose clamp
6	W702434	Rear heater hose and tube assembly bracket bolt
7	W702434	Front heater hose and tube assembly bracket bolt
8	18B402	Heater hose and tube assembly

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Drain the engine cooling system. For additional information, refer to Section 303-03 .
3. Remove the engine air cleaner outlet tube. For additional information, refer to Section 303-12 .
4. Remove the fresh air inlet duct. For additional information, refer to Section 412-01 .
5. Disconnect the LH heater hose at the front of the heater hose and tube assembly.
6. Disconnect the RH heater hose at the front of the heater hose and tube assembly.
7. Disconnect the heater outlet hose at the front of the heater hose and tube assembly.

8. Remove the rear heater hose and tube assembly bracket bolt.
    - To install, tighten to 9 Nm (80 lb-in).

9. Remove the front heater hose and tube assembly bracket bolt.
    - To install, tighten to 9 Nm (80 lb-in).

10. Release the 3 heater core hose clamps and disconnect the heater hoses from the heater core.

11. Release the bypass hose clamp and disconnect the bypass hose.

12. Remove heater hose and tube assembly.

13. To install, reverse the removal procedure.
    - Clean and lubricate the coolant hoses with plain water only if needed.

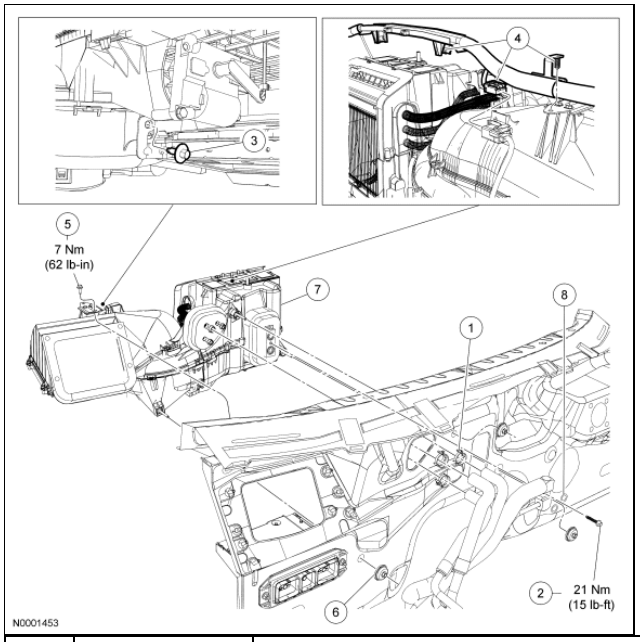
14. Fill the engine cooling system. For additional information, refer to Section 303-03 .

Heater Core And Evaporator Core Housing

Printable View (224 KB)

Material

Item	Specification
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1	8287	Heater core hose clamp (3 required)
2	N805334S2	Thermostatic expansion valve (TXV) manifold bolt
3	N606675	PCM bracket bolt
4	19D887	Wire harness
5	N706467	Heater core and evaporator core housing bracket bolt
6	W706467	Heater core and evaporator core housing nut (3 required)
7	19850	Heater core and evaporator core housing
8	19E889	TXV manifold O-rings (2 required)

Removal and Installation

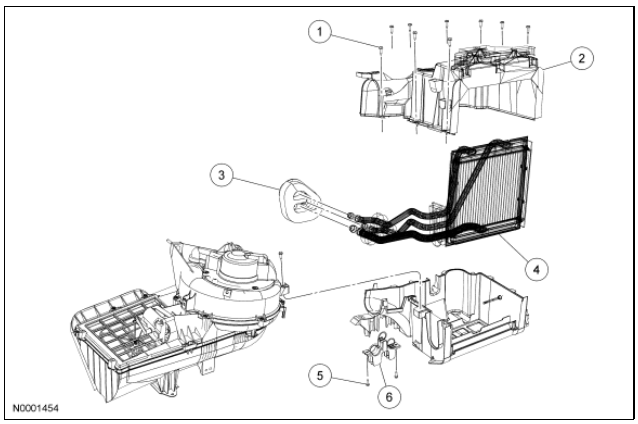
⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor

lubricant.

1. Recover the refrigerant. For additional information, refer to Section 412-00 .
2. Partially drain the cooling system. For additional information, refer to Section 303-03 .
3. Remove the instrument panel. For additional information, refer to Section 501-12 .
4. Release the 3 heater core hose clamps and disconnect the heater hoses from the heater core.
5. Remove the TXV manifold bolt.
   - To install, tighten to 21 Nm (15 lb-ft).
6. Remove the PCM bracket bolt.
7. Detach the wire harness from the heater core and evaporator core housing.
8. Remove the heater core and evaporator core housing bracket bolt.
   - To install, tighten to 7 Nm (62 lb-in).
9. Remove the 3 heater core and evaporator core housing nuts.
10. Remove the heater core and evaporator core housing.
11. Remove the TXV manifold O-rings.
12. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean mineral oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .
13. Fill the engine cooling system. For additional information, refer to Section 303-03 .
14. Evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

Heater Core

Printable View (191 KB)

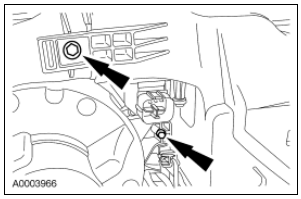


Item	Part Number	Description
1	W705314	Heater core and evaporator core housing screw (10 required)
2	19897	Heater core and evaporator core cover
3	18529	Dash panel seal
4	19B539	Heater core
5	W705314	Heater core tube bracket screw (2 required)
6	18A456	Heater core tube bracket

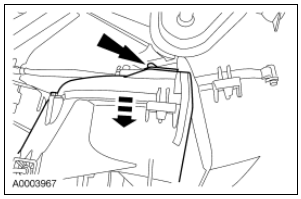
Removal and Installation

1. Remove the heater core and evaporator core housing. For additional information, refer to Heater Core And Evaporator Core Housing in this section.

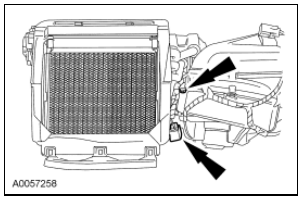
2. Remove the 2 screws which connect the air inlet housing to the evaporator core housing.



3. Disengage the clip and separate the air inlet housing from the evaporator core housing.



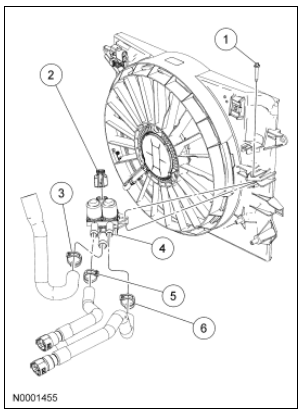
4. Disconnect and position the evaporator core housing wire harness aside.



5. Remove the 8 remaining heater core and evaporator core cover screws.
6. Remove the heater core and evaporator core housing cover.
7. Remove the 2 heater core tube bracket screws.
8. Remove the heater core tube bracket.
9. Remove the heater core.
10. Remove the dash panel seal.

Dual Coolant Flow Valve

Printable View (107 KB)



Item	Part Number	Description
1		Dual coolant control valve bolt
2	18C463	Dual coolant control valve electrical connector
3	8287	Dual coolant control valve hose clamp
4	18495	Dual coolant control valve
5	8287	LH heater hose clamp
6	8287	RH heater hose clamp

Removal and Installation

All vehicles

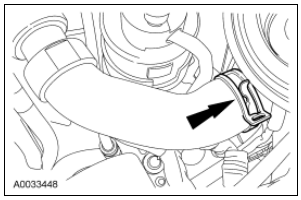
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the engine air cleaner outlet tube. For additional information, refer to Section 303-12 .

Vehicles equipped with 3.9L engine

3. Drain the engine coolant. For additional information, refer to Section 303-03 .

4. Release the clamp and disconnect the upper radiator hose.



Vehicles equipped with 3.0L engine

5. Clamp off the 3 heater hoses at the dual coolant control valve.

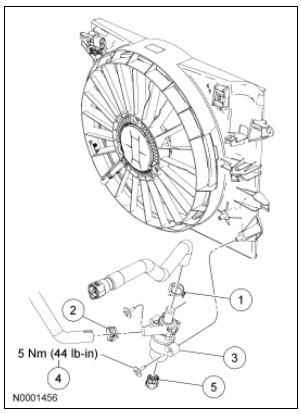
All vehicles

6. Release the dual control valve hose clamp and disconnect the hose.

7. Release the LH heater hose clamp and disconnect the hose.
8. Release the RH heater hose clamp and disconnect the hose.
9. Disconnect the dual coolant control valve electrical connector.
10. Remove the dual coolant control valve bolt.
11. Remove the dual coolant control valve.
12. To install, reverse the removal procedure.
    - Clean and lubricate the coolant hoses with plain water only, if needed.
13. Fill the engine cooling system. For additional information, refer to Section 303-03 .

Auxiliary Coolant Flow Pump

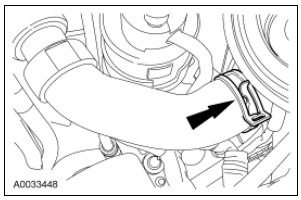
Printable View (103 KB)



Item	Part Number	Description
1	8287	Auxiliary coolant flow pump-to-heater hose and tube assembly hose clamp
2	8287	Auxiliary coolant flow pump-to-engine hose clamp
3	18D473	Auxiliary coolant flow pump
4		Auxiliary coolant flow pump bolt (2 required)
5	18C463	Auxiliary coolant flow pump electrical connector

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the engine air cleaner outlet tube. For additional information, refer to Section 303-12 .
3. Drain the engine coolant. For additional information, refer to Section 303-03 .
4. Release the clamp and disconnect the upper radiator hose.



5. Release the auxiliary coolant flow pump-to-engine hose clamp and disconnect the hose.
6. Release the auxiliary coolant flow pump-to-heater hose and tube assembly hose clamp and disconnect the hose.
7. Disconnect the auxiliary coolant flow pump electrical connector.
8. Remove the 2 auxiliary coolant flow pump bolts.
   - To install, tighten to 5 Nm (44 lb-in).

9. Remove the auxiliary coolant flow pump.

10. To install, reverse the removal procedure.
    - Clean and lubricate the coolant hoses with plain water only, if needed.

11. Fill the engine cooling system. For additional information, refer to Section 303-03 .

Air Conditioning

Printable View (152 KB)

The A/C refrigerant system is a clutch cycling, thermostatic expansion valve type. The system components are:

- A/C compressor
- A/C clutch
- A/C condenser core
- A/C evaporator core
- Thermostatic expansion valve (TXV)
- Receiver/drier
- Connecting refrigerant lines

The refrigeration system operation is controlled by the:

- TXV.
- evaporator discharge temperature sensor.
- A/C compressor pressure relief valve.
- A/C pressure transducer.
- powertrain control module (PCM).
- dual-zone EATC module.
- ambient temperature sensor.

The refrigerant system incorporates a variable capacity A/C compressor. The A/C compressor clutch engagement is controlled by the vehicle PCM.

The evaporator discharge temperature sensor senses evaporator discharge temperature. The dual-zone EATC module monitors the evaporator discharge temperature sensor and communicates with the PCM to control clutch cycling. The dual-zone EATC also monitors the ambient air temperature sensor and disables A/C operation when the ambient air temperature is below 0°C (32°F).

The A/C pressure transducer is located in the compressor discharge line and is monitored by the PCM. If high or low refrigerant pressures are experienced, the PCM will interrupt A/C compressor operation.

The pressure relief valve is installed in the compressor manifold and tube assembly and protects the system from excessively high refrigerant pressure.

The TXV, which is mounted to the evaporator core inlet and outlet tubes, contains an adjustable orifice which provides the restriction that separates the high and low-pressure liquid phases in the refrigeration system.

A/C Compressor and Clutch Assembly

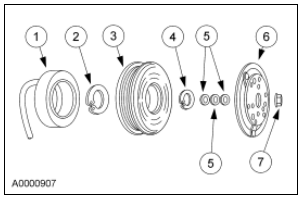
NOTE: Internal A/C compressor components are not serviced separately. The variable scroll compressor is serviced only as an assembly. The A/C clutch, A/C clutch pulley and the A/C clutch field coil are serviceable.

The SC105V Variable Scroll A/C compressor has the following characteristics:

- A variable capacity function controlled by a suction pressure sensing device.
- A fixed and orbiting scroll to provide refrigerant compression.
- A non-serviceable shaft seal.

- The A/C compressor uses PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B. This oil contains special additives necessary for the A/C compressor.

The A/C compressor contains a thermal cutout switch which senses the compressor housing temperature. The switch will disengage the A/C compressor clutch if the housing temperature exceeds 120°C (247°F).



Item	Part Number	Description
1	19D798	A/C clutch field coil
2	W704579-S430	Field coil snap ring
3	19D784	A/C clutch pulley
4	W701742-S430	Pulley snap ring
5	19D648	A/C clutch hub spacer
6	19D786	A/C clutch
7	W704577-S301	A/C clutch nut

The SC105V magnetic A/C clutch has the following characteristics:

- It drives the compressor shaft.
- When battery positive voltage (B+) is applied to the A/C clutch field coil, the clutch disc and hub assembly is drawn toward the A/C clutch pulley.
- The magnetic force locks the clutch disc and hub assembly and the A/C clutch pulley together as one unit, causing the compressor shaft to rotate.
- When B+ is removed from the A/C clutch field coil, springs in the clutch disc and hub assembly move the clutch disc away from the A/C clutch pulley.

A/C Compressor Pressure Relief Valve

An A/C compressor pressure relief valve is incorporated into the compressor A/C manifold and tube to:

- relieve unusually high refrigerant system discharge pressure buildups. For specifications regarding operating pressure(s), refer to Section 412-00 .
- prevent damage to the A/C compressor and other system components.
- avoid total refrigerant loss by closing after the excessive pressure has been relieved.

A/C Condenser Core

The A/C condenser core has the following characteristics:

- It is an aluminum fin and tube design heat exchanger located in front of the vehicle radiator.
- It cools compressed refrigerant gas by allowing air to pass over fins and tubes to extract heat and by condensing gas to liquid refrigerant as it is cooled.

Refrigerant Lines

The manifold and tube assembly receiver/drier carries the high-pressure liquid from the condenser core to the receiver/drier, and from the receiver/drier to the manifold and tube assembly thermostatic expansion valve (TXV). It attaches to the A/C receiver drier, uses O-ring seals, and also contains the high-pressure service port.

The manifold and tube assembly thermostatic expansion valve carries high-pressure liquid to the thermostatic expansion valve and low-pressure gas from the thermostatic expansion valve to the manifold and tube assembly A/C compressor.

The manifold and tube assembly A/C compressor carries the high-pressure gas from the A/C compressor to the condenser core. It also carries the low-pressure gas received from the manifold and tube assembly thermostatic expansion valve to the A/C compressor. The A/C manifold and tube assembly is attached to the A/C compressor, uses O-ring seals, and has:

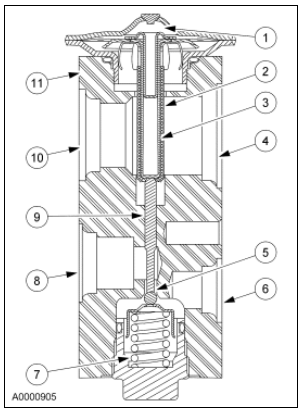
- a Schrader-type valve stem core fitting used to mount the A/C pressure transducer so that the A/C pressure transducer can be removed without discharging the A/C system.
- a serviceable high-pressure relief valve.

A/C Evaporator Core

The A/C evaporator core is the plate/fin type.

- A mixture of refrigerant and oil exits the TXV and enters the evaporator tank area through the 12.7-mm (1/2-in) tube.
- It exits the evaporator through the 15.9-mm (5/8-in) tube then passes through the TXV.

A/C Thermostatic Expansion Valve



Item	Description
1	Temperature sensing bulb
2	Insulator
3	Hollow core pin-type retainer
4	Outlet port low-pressure liquid
5	Metering orifice
6	Inlet port high-pressure liquid
7	Spring
8	

	Evaporator inlet port low-pressure liquid
9	Pin
10	Evaporator outlet port low-pressure gas
11	Housing

The TXV is located between the evaporator core lines and the thermostatic expansion valve manifold and tube assembly at the rear of the engine compartment. The TXV provides a restriction to the flow of refrigerant from the high pressure side of the refrigerant system, and separates the low pressure and high pressure sides of the refrigerant system. Refrigerant entering and exiting the evaporator core passes through the TXV through 2 separate flow paths. An internal temperature sensing bulb senses the temperature of the refrigerant flowing out of the evaporator core and adjusts an internal pin-type valve to meter the refrigerant flow into the evaporator core. The internal pin-type valve decreases the amount of refrigerant entering the evaporator core at lower temperatures, and increases the amount of refrigerant entering the evaporator core at higher temperatures.

Receiver/Drier

The receiver/drier is mounted to the engine fan shroud to the right of the vehicle center. The inlet tube of the receiver/drier attaches directly to the A/C condenser core and the outlet tube of the receiver/drier attaches to the thermostatic expansion valve inlet line.

The receiver/drier stores high-pressure liquid after it leaves the condenser core. A desiccant bag mounted in the receiver/drier removes any retained moisture.

The manifold and tube assembly that mounts to the top of the receiver/drier contains the high-pressure service port for the refrigerant system.

A/C Pressure Transducer

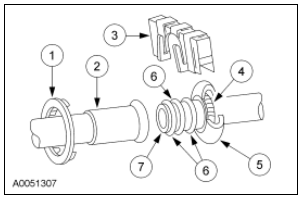
The A/C pressure transducer monitors the compressor discharge pressure and communicates with the powertrain control module (PCM). The PCM will interrupt A/C compressor operation in the event that the A/C pressure transducer indicates high system discharge pressures. It is also used to sense no or low charge conditions. If the pressure is below a predetermined value for a given ambient temperature, the PCM will not allow the clutch to engage.

- The A/C pressure transducer is mounted on a Schrader valve-type fitting on the A/C compressor to condenser discharge line.
- A valve depressor, located inside the threaded end of the A/C pressure transducer, presses on the Schrader valve stem and allows the A/C pressure transducer to monitor the compressor discharge pressure.
- When the compressor discharge pressure rises, the PCM will interrupt the A/C compressor clutch coil circuit and disengage the A/C compressor. When the pressure drops, the PCM will enable the A/C compressor circuit. For specifications regarding operating pressure(s), refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
- It is not necessary to discharge the refrigerant system to remove the A/C pressure cutoff switch.

Refrigerant System Dye

Fluorescent refrigerant system dye is added to the refrigerant system at the factory to assist in refrigerant system leak diagnosis using a Rotunda-approved ultraviolet blacklight. It is not necessary to add additional dye to the refrigerant system before diagnosing leaks, even if a significant amount of refrigerant has been removed from the system. Replacement receiver/driers are shipped with a fluorescent dye "wafer" included in the desiccant bag, which will dissolve after approximately 30 minutes of continued A/C operation. It is not necessary to add dye after flushing or filtering the refrigerant system because a new receiver/drier is installed as part of the flushing or filtering procedure. Additional refrigerant system dye should only be added if more than 50% of the refrigerant system lubricant capacity has been lost due to a fitting separation, hose rupture, etc. For additional information, refer to Section 412-00 .

Spring Lock Coupling

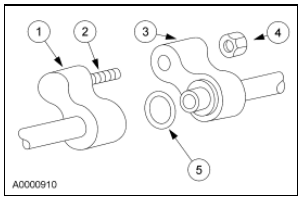


Item	Part Number	Description
1		Plastic indicator ring
2		Female fitting
3	19E746	A/C tube lock coupling clip
4	19E576	A/C tube lock coupling spring
5		Cage
6	19E889	O-ring (3 required)
7		Male fitting

When disconnecting or connecting spring lock couplings, observe the following.

- When the coupling is connected together, the flared end of the female fitting slips behind the garter spring inside the cage of the male fitting.
- The garter spring and cage then prevent the flared end of the female fitting from pulling out of the cage.
- Three O-ring seals are used to seal between the thermostatic expansion valve outlet tube and the compressor inlet tube. All other couplings have 2 O-ring seals.
- Use only the O-ring seals listed in the Ford Master Parts Catalog for the spring lock coupling.
- An A/C tube lock coupling clip is used to secure the coupling.

Peanut Fitting



Item	Part Number	Description
1		Female block (part of tube assembly)
2	W701890-S426	Stud (part of female block)
3		Male block (part of 19712)

4	W520413-S301	Nut
5		O-ring seal

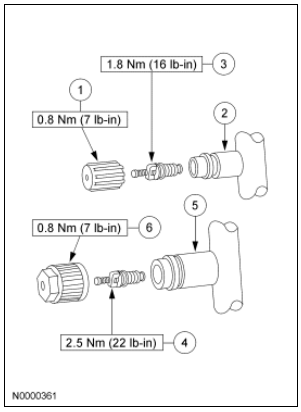
When disconnecting or connecting peanut fittings, observe the following.

- The male and female blocks of the peanut fitting are retained with a nut.
- Support the female fitting with a wrench to prevent twisting of the tubes.
- An O-ring seal is installed around the tube on the male block.
- When correctly assembled, the male and female fittings should be flush.
- Use only the O-ring seal listed in the Ford Master Parts Catalog.

Service Gauge Port Valves

The high-pressure service gauge port valve is located on the A/C receiver/drier manifold and tube assembly.

The low-pressure service gauge port valve is located on the manifold of the A/C compressor manifold and tube assembly at the A/C compressor.



Item	Part Number	Description
1	19D702	Low-pressure service gauge port valve cap
2		Low-pressure service gauge port valve
3	19D701	Low-pressure Schrader-type valve
4	19D701	High-pressure Schrader-type valve
5		High-pressure service gauge port valve
6	19D702	High-pressure service gauge port valve

The fitting is an integral part of the refrigeration line or component.

- Special couplings are necessary for both the high side and low side service gauge ports.
- A very small amount of leakage will always be detectable around the Schrader-type valve with the A/C charging valve cap removed, and is considered normal. A new Schrader-type valve core can be installed if the seal leaks excessively.
- The A/C charging valve caps are used as primary seals in the refrigerant system to prevent leakage through the Schrader-type valves from reaching the atmosphere. Always install and tighten the A/C charging valve caps (19D702) to the correct torque after they are removed.
- Always install the A/C charging valve cap on the service gauge port valves after repairing the refrigerant system.

Air Conditioning

Printable View (7 KB)

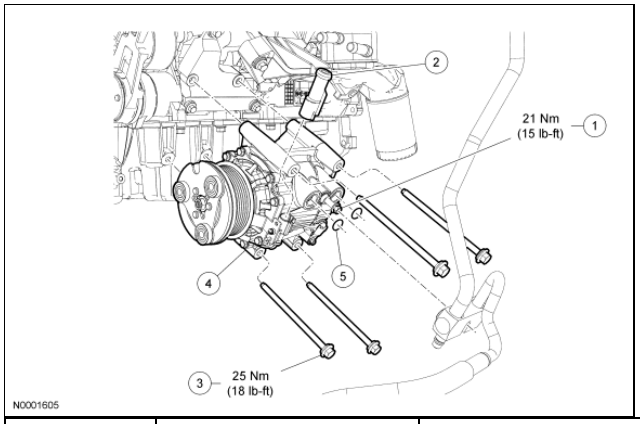
Refer to Section 412-00 .

Air Conditioning (A/C) Compressor 3.0L (4V)

Printable View (117 KB)

Material

Item	Specification
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1	W704692	Compressor manifold bolt
2	12B637	Field coil electrical connector
3	W704577	A/C compressor bolt (4 required)
4	19703	A/C compressor
5	19E889	O-ring seal (2 required)

Removal and Installation

⚠ CAUTION: If installing a new air conditioning compressor due to an internal failure of the old unit, you must carry out the following procedures to remove contamination from the air conditioning system.

- If A/C flushing equipment is available, carry out flushing of the air conditioning system prior to installing a new air conditioning compressor. For additional information, refer to Section 412-00 .
- If A/C flushing equipment is not available, carry out filtering of the air conditioning system after a new air conditioning compressor has been installed. For additional information, refer to Section 412-00 .
- Install a new thermostatic expansion valve, as directed by the A/C flushing or filtering procedure.
- Install a new receiver drier (19950) as directed by the A/C flushing or filtering procedure.

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor

lubricant.

NOTE: Installation of a new receiver drier is not required when repairing the air conditioning system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the receiver drier.

NOTE: If installing a new A/C compressor, the A/C clutch disc and hub (19D786), A/C compressor pulley (19D784) and A/C clutch field coil (19D798) must be inspected and transferred from the old unit to the new unit if suitable for reuse.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. If flushing of the air conditioning system has not been carried out, recover the refrigerant. For additional information, refer to Section 412-00 .

3. Remove the drive belt from the A/C compressor pulley.

4. Loosen the compressor manifold bolt and detach the compressor manifold.
   - Discard the O-ring seals.
   - To install, tighten to 21 Nm (15 lb-ft).

5. Disconnect the field coil electrical connector.

6. Remove the 4 A/C compressor bolts.
   - To install, tighten to 25 Nm (18 lb-ft).

7. Remove the A/C compressor.

8. To install, reverse the removal procedure.
   - If a new A/C compressor is to be installed, the clutch assembly must be transferred from the old unit to the new unit. For additional information, refer to Clutch and Clutch Field Coil in this section.
   - Install new O-ring seals lubricated in clean mineral oil.
   - If filtering of the refrigerant system is not to be carried out, lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

9. If filtering of the refrigerant system is not to be carried out, evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

4	19703	A/C compressor
5	19E889	O-ring seal (2 required)

Removal and Installation

⚠ CAUTION: If installing a new air conditioning compressor due to an internal failure of the old unit, you must carry out the following procedures to remove contamination from the air conditioning system.

- If A/C flushing equipment is available, carry out flushing of the air conditioning system prior to installing a new air conditioning compressor. For additional information, refer to Section 412-00 .
- If A/C flushing equipment is not available, carry out filtering of the air conditioning system after a new air conditioning compressor has been installed. For additional information, refer to Section 412-00 .
- Install a new thermostatic expansion valve, as directed by the A/C flushing or filtering procedure.
- Install a new receiver drier (19950) as directed by the A/C flushing or filtering procedure.

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor

lubricant.

NOTE: Installation of a new receiver drier is not required when repairing the air conditioning system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the receiver drier.

NOTE: If installing a new A/C compressor, the A/C clutch disc and hub (19D786), A/C compressor pulley (19D784) and A/C clutch field coil (19D798) must be inspected and transferred from the old unit to the new unit if suitable for reuse.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. If flushing of the air conditioning system has not been carried out, recover the refrigerant. For additional information, refer to Section 412-00 .

3. Remove the drive belt from the A/C compressor pulley.

4. Loosen the compressor manifold bolt and detach the compressor manifold.
   - Discard the O-ring seals.
   - To install, tighten to 21 Nm (15 lb-ft).

5. Disconnect the field coil electrical connector.

6. Remove the 4 A/C compressor bolts.
   - To install, tighten to 25 Nm (18 lb-ft).

7. Remove the A/C compressor.

8. To install, reverse the removal procedure.
   - If a new A/C compressor is to be installed, the clutch assembly must be transferred from the old unit to the new unit. For additional information, refer to Clutch and Clutch Field Coil in this section.
   - Install new O-ring seals lubricated in clean mineral oil.
   - If filtering of the refrigerant system is not to be carried out, lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

9. If filtering of the refrigerant system is not to be carried out, evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

Receiver Drier

Printable View (70 KB)

Item	Part Number	Description
1	W520413	Receiver/drier fitting nut
2		Receiver/drier bracket bolt
3	19959	Receiver/drier
4	19E889	O-ring (2 required)

Removal and Installation

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier.

1. Recover the refrigerant. For additional information, refer to Section 412-00 .

2. Remove the air cleaner outlet tube. For additional information, refer to Section 303-12 .

3. Remove the receiver/drier fitting nut.
   - Discard the O-ring seals.
   - To install, tighten to 8 Nm (71 lb-in).

4. Remove the receiver/drier bracket bolt.
    - To install, tighten to 7 Nm (62 lb-in)

5. Remove the receiver/drier.

6. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean mineral oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

7. Evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

Condenser Core

5	W520413	Condenser outlet fitting nut
6	19E889	O-ring
7	N805986	Condenser bolt (2 required)

Removal and Installation

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier.

1. Position the vehicle on a hoist with the gear selector in NEUTRAL. For additional information, refer to Section 100-02 .

2. Recover the refrigerant. For additional information, refer to Section 412-00 .

3. Remove the center underbody deflector shield.

4. Remove the condenser inlet fitting nut.
   - Discard the O-ring seal.
   - To install, tighten to 8 Nm (71 lb-in).

5. Remove the 2 lower air deflector pin-type retainers.

6. Remove the lower air deflector.

7. Remove the condenser outlet fitting nut.
   - Discard the O-ring seal.
   - To install, tighten to 8 Nm (71 lb-in).

8. Remove the 2 condenser bolts and the condenser.
   - To install, tighten to 6 Nm (53 lb-in).

9. To install, reverse the removal procedure.
   - Install new O-ring seals lubricated in clean mineral oil.
   - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

10. Evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

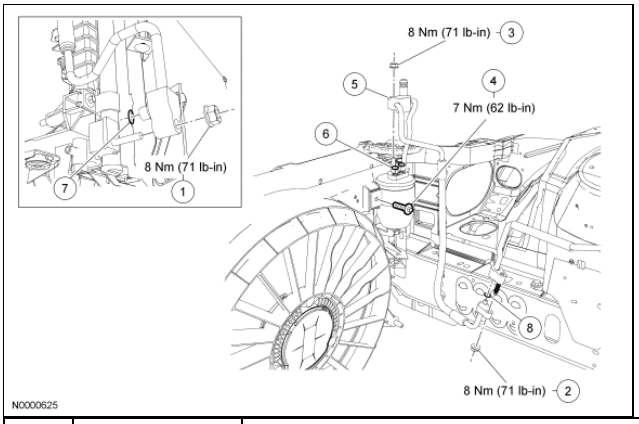
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1	8287	Heater core hose clamp (3 required)
2	8287	Heater hose clamp
3	W702434	Front heater tube bracket bolt
4	W702434	Rear heater tube bracket bolt
5	W520413	Compressor manifold and tube inlet fitting nut
6	W520413	Receiver drier manifold and tube fitting nut
7	W702434	Front thermostatic expansion valve (TXV) manifold and tube bracket bolt
8	W702434	Rear TXV manifold and tube bracket bolt
9	W705968	Wire harness bracket bolt (3 required)
10	N80533452	TXV fitting bolt
11	19E889	O-ring seal

12	19E889	O-ring seal
13	19E889	O-ring seal (2 required)

Removal and Installation

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.

NOTE: Installation of a new receiver drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver drier.

NOTE: Lubricate the coolant hoses with plain water only if needed.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Recover the refrigerant. For additional information, refer to Section 412-00 .
3. Drain the engine coolant. For additional information, refer to Section 303-03 .
4. Remove the fresh air inlet duct. For additional information, refer to Section 412-01 .
5. Remove the RH air deflector shield.
6. Release the clamps and disconnect the 3 heater core hoses.
7. Release the lower heater hose clamp and disconnect the lower heater hose.
8. Remove the front heater tube bracket bolt.
   - To install, tighten to 9 Nm (80 lb-in).
9. Remove the rear heater tube bracket bolt.
   - To install, tighten to 9 Nm (80 lb-in).
10. Remove the compressor manifold and tube inlet fitting nut.
    - Discard the O-ring seals.
    - To install, tighten to 8 Nm (71 lb-in).
11. Remove the receiver drier manifold and tube fitting nut.
    - Discard the O-ring seals.
    - To install, tighten to 8 Nm (71 lb-in).
12. Remove the front TXV manifold and tube bracket bolt.
    - To install, tighten to 9 Nm (80 lb-in).
13. Remove the rear TXV manifold and tube bracket bolt.
    - To install, tighten to 9 Nm (80 lb-in).
14. Remove the 3 wire harness bracket bolts.
    - To install, tighten to 9 Nm (80 lb-in).
15. Remove the TXV fitting bolt.

- Discard the O-ring seals.
- To install, tighten to 21 Nm (15 lb-ft).

16. Remove the TXV manifold and tube assembly.

17. Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

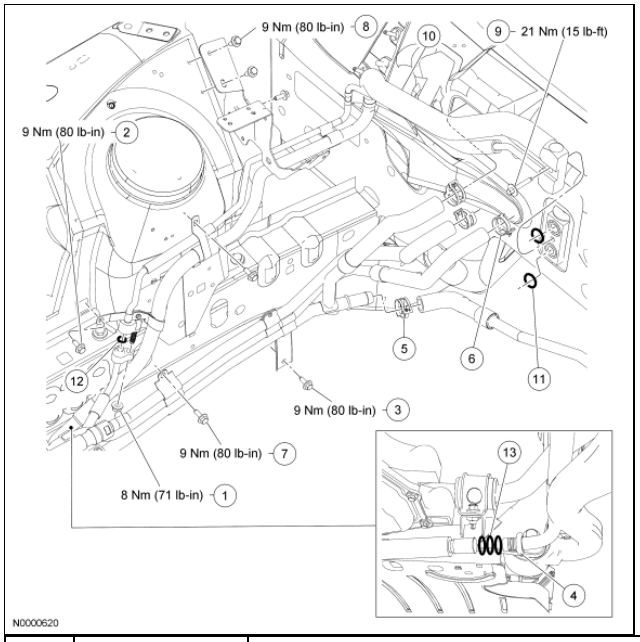
18. Evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

Thermostatic Expansion Valve Manifold and Tube Assembly 3.9L

Printable View (196 KB)

Material

Item	Specification
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1	W520413	Receiver/drier manifold and tube fitting nut
2	W702434	Thermostatic expansion valve (TXV) manifold and tube bracket bolt
3	W702434	Rear heater tube bracket bolt
4		Compressor manifold and tube inlet fitting (part of 19D734)
5	8287	Heater hose clamp
6	8287	Heater core hose clamp (3 required)
7	W702434	Front heater tube bracket bolt
8	W705968	Wire harness bracket bolt (3 required)
9	N80533452	TXV fitting bolt
10	19835A	TXV manifold and tube assembly
11	19E889	O-ring (2 required)

12	19E889	O-ring
13	19E889	O-ring (3 required)

Removal and Installation

⚠ CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier.

NOTE: Lubricate the coolant hoses with plain water only if needed.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Recover the refrigerant. For additional information, refer to Section 412-00 .

3. Drain the engine coolant. For additional information, refer to Section 303-03 .

4. Remove the fresh air inlet duct. For additional information, refer to Section 412-01 .

5. Remove the RH air deflector shield.

6. Remove the receiver/drier manifold and tube fitting nut.
   - Discard the O-ring seals.
   - To install, tighten to 8 Nm (71 lb-in).

7. Remove the thermostatic expansion valve (TXV) manifold and tube bracket bolt.

8. Remove the rear heater tube bracket bolt.
   - To install, tighten to 9 Nm (80 lb-in).

9. Disconnect the compressor manifold and tube inlet fitting.
   - Discard the O-ring seals.

10. Release the lower heater hose clamp and disconnect the lower heater hose.

11. Release the clamps and disconnect the heater core heater hoses.

12. Remove the front heater tube bracket bolt.
    - To install, tighten to 9 Nm (80 lb-in).

13. Remove the 3 wire harness bracket bolts.
    - To install, tighten to 9 Nm (80 lb-in).

14. Remove the TXV fitting bolt.
    - Discard the O-ring seals.
    - To install, tighten to 21 Nm (15 lb-ft).

15. Remove the TXV manifold and tube assembly.

16. Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

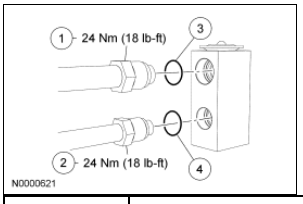
17. Evacuate, leak test and charge the refrigerant system. For additional information, refer to Section 412-00 .

Thermostatic Expansion Valve

Printable View (26 KB)

Material

Item	Specification
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1		Evaporator outlet fitting (part of 19860)
2		Evaporator inlet fitting (part of 19860)
3	19E889	O-ring
4	19E889	O-ring

Removal and Installation

⚠ **CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.**

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier.

1. Remove the evaporator core. For additional information, refer to Evaporator Core in this section.

2. Disconnect the evaporator outlet fitting.
   - Discard the O-ring seal.
   - To install, tighten to 24 Nm (18 lb-ft).

3. Disconnect the evaporator inlet fitting.
   - Discard the O-ring seal.
   - To install, tighten to 24 Nm (18 lb-ft).

4. To install, reverse the removal procedure.
   - Install new O-ring seals lubricated in clean mineral oil.

Clutch and Clutch Field Coil

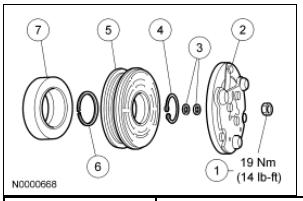
Printable View (187 KB)

Special Tool(s)

ST1585-A	Remover, Compressor Pulley 412-001 (T71P-19703-B)
ST2584-A	Holding Fixture, Compressor Clutch 412-103 (T95L-19703-AH)
 ST1233-A	Installer, A/C Compressor Pulley 412-109 (T97P-19D786-A)

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA	WSE-M4G323-A4

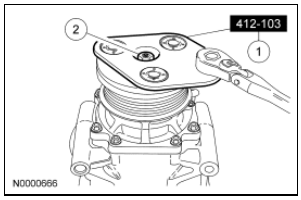


Item	Part Number	Description
1	18865	A/C clutch disc and hub nut
2	19D786	A/C clutch disc and hub
3	19D648	A/C clutch disc and hub spacer
4	W701742	A/C compressor pulley snap ring
5	19D784	A/C compressor pulley
6	W704579	A/C clutch field coil snap ring
7	19D798	A/C clutch field coil

Removal

1. Remove the A/C compressor (19703). For additional information, refer to Air Conditioning (A/C) Compressor - 3.0L (4V) or Air Conditioning (A/C) Compressor - 3.9L in this section.

2. Remove the A/C clutch disc and hub nut.
    1. Hold the A/C clutch disc and hub with the special tool.
    2. Remove the nut.

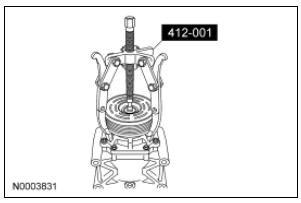


3. Remove the A/C clutch disc and hub.

4. Remove the A/C compressor pulley snap ring.

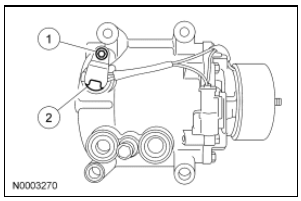
5. ⚠ **CAUTION: Do not use air tools. Damage to the A/C compressor pulley may result.**

   Using the special tool, remove the A/C clutch pulley.



6. Remove the A/C clutch field coil snap ring.

7. Remove the A/C clutch field coil.
   1. Remove the bolt.
   2. Remove the thermal limiter and A/C clutch field coil.



Installation

1. **NOTE:** The A/C clutch components should be reused unless obvious signs of damage are found. If excessive grooving is found, a new A/C clutch disc and hub and a new A/C compressor pulley must be installed together. Otherwise, each component can be installed individually where needed.

   Visually inspect the A/C clutch disc and hub, A/C compressor pulley and A/C clutch field coil for damage.

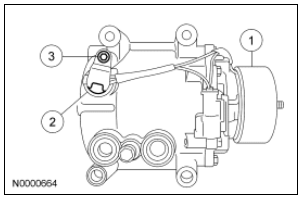
   - Inspect for physical damage, including cracked or melted components or discoloration due to excessive heat.
   - Inspect for excessive wear, including grooving in the A/C clutch disc and hub or A/C compressor pulley that is more than fingernail depth.
   - Inspect for roughness in the A/C compressor pulley bearing.

2. Clean the A/C clutch disc and hub, A/C compressor pulley and A/C clutch field coil mounting surfaces.

3. Apply a pea-sized drop of silicone sealant to the thermal limiter socket.

4. Install the A/C clutch field coil.

1. Install the A/C clutch field coil.
2. Install the thermal limiter.
3. Tighten the bolt to 6 Nm (53 lb-in).

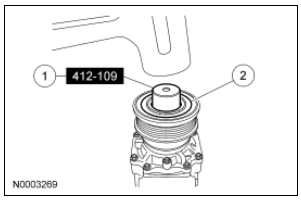


5. Install the A/C clutch field coil snap ring.

6. **NOTE:** The A/C compressor pulley is a tight fit on the A/C compressor. It must be correctly aligned during installation.

   Install the A/C compressor pulley.

   1. Install the special tool.
   2. Install the A/C compressor pulley.

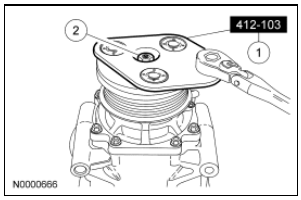


7. Install the A/C compressor pulley snap ring with the bevel side out.

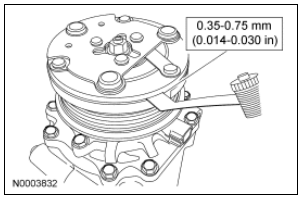
8. Place one nominal thickness A/C clutch disc and hub spacer inside the clutch hub spline opening.

9. Install the A/C clutch disc and hub.

10. Install the A/C clutch disc and hub nut.
    1. Hold the A/C clutch disc and hub with the special tool.
    2. Tighten the nut to 19 Nm (14 lb-ft).



11. Measure and adjust the clutch air gap by removing or adding A/C clutch disc and hub spacers.



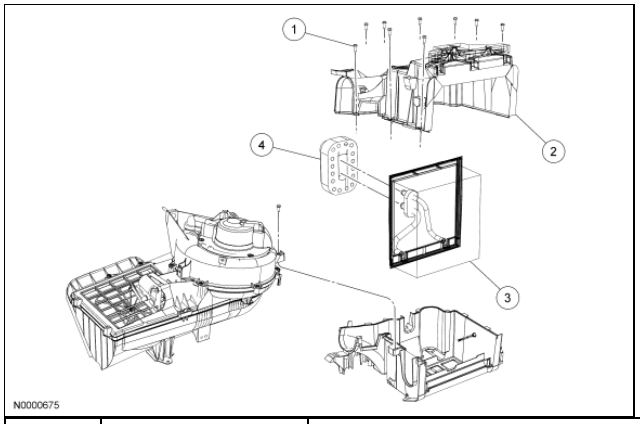
12. Install the A/C compressor. For additional information, refer to Air Conditioning (A/C) Compressor 3.0L (4V) or Air Conditioning (A/C) Compressor 3.9L in this section.

Evaporator Core

Printable View (178 KB)

Material

Item	Specification
PAG Refrigerant Compressor Oil for R134a Systems (Motorcraft YN-12-C) F7AZ-19589-DA	WSH-M1C231-B
Refrigerant Compressor Oil (Mineral Oil) (Motorcraft YN-9-A) F73Z-19577-AA	ESH-M2C31-A2



Item	Part Number	Description
1	W705314	Heater core and evaporator core housing screw
2	19A897	Heater core and evaporator core housing cover
3	19860	Evaporator core
4	19A672	Dash panel seal

Removal and Installation

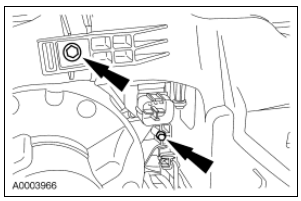
⚠ **CAUTION: Refrigerant compressor oil (mineral oil) should be used to lubricate R-134a refrigerant system O-ring seals only and should not be added to the R-134a refrigerant system as an A/C compressor lubricant. PAG refrigerant compressor oil only should be used as an A/C compressor lubricant.**

NOTE: If an evaporator core leak is suspected, the evaporator core must be vacuum leak tested before it is removed from the vehicle.

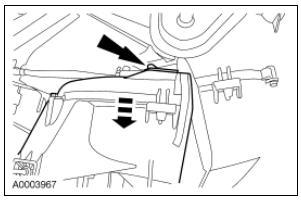
NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the receiver/drier.

1. Remove the heater core and evaporator core housing. For additional information, refer to Section 412-02 .

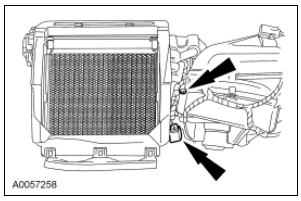
2. Remove the 2 screws which connect the air inlet housing to the evaporator core housing.



3. Disengage the clip and separate the air inlet housing from the evaporator core housing.



4. Disconnect and position the evaporator core housing wire harness aside.



5. Remove the dash panel seal.

6. Remove the 8 heater core and evaporator core housing cover screws.

7. Remove the heater core and evaporator core housing cover.

8. Remove the evaporator core.

9. To install, reverse the removal procedure.
   - Install new O-ring seals lubricated in clean mineral oil.
   - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to Section 412-00 .

Control Components

Printable View (15 KB)

Dual-Zone Electronic Automatic Temperature Control

The dual-zone electronic automatic temperature control (EATC) module analyzes input from the following major sources:

- temperature, function and blower selection (made by the vehicle occupants)
- in-vehicle temperature sensor
- ambient temperature sensor
- dual sunload sensor
- vehicle speed
- engine rpm
- engine coolant temperature
- actuator door position controls
- driver and passenger heater core air discharge temperature sensors
- evaporator air discharge temperature sensor

Using these inputs, the microcontroller determines the correct conditions for the following outputs:

- A/C clutch engagement
- blower speed
- panel door position
- defrost door position
- floor door position
- air inlet duct door position
- coolant control valve
- electric water pump (3.9L engine)
- external temperature (outside temperature display)

Control System Inputs

Climate Control Assembly (EATC Module)

The dual-zone EATC module, located in the instrument panel, has the following features:

- a blower speed override control for manual input
- individual temperature set controls for driver and passenger
- an A/C request control for manual input
- a recirculated air control for manual input
- a vacuum fluorescent display for displaying set temperatures for both the driver and passenger, external or ambient temperature, blower speed setting and diagnostic trouble codes (DTCs)
- an on-board diagnostic (OBD) feature to display DTCs.
- air distribution mode overrides
- rear defog control
- heated wiper rest or heated windshield
- EXT temperature control to display external or outside temperature
- F/C control to toggle between English or metric settings

A/C Ambient Air Temperature Sensor

The A/C ambient air temperature sensor:

- is located on the grille opening reinforcement behind the grille near the center of the vehicle.
- contains a thermistor which measures the temperature of outside air as a resistance and sends that reading to the dual-zone EATC module.

In-Vehicle Temperature Sensor

The in-vehicle temperature sensor is located in the instrument cluster finish panel. The sensor operates in the following manner:

- A thermistor in the in-vehicle temperature sensor measures air temperature inside the passenger compartment.
- An automatic temperature control sensor hose is connected between the A/C plenum housing and the in-vehicle temperature sensor.
- The automatic temperature control sensor hose and venturi takes air from the A/C plenum housing to create a suction across the in-vehicle temperature sensor.
- The suction draws in-vehicle air into the in-vehicle temperature sensor and across the thermistor.

Dual A/C Sunload Sensor

The dual A/C sunload sensor:

- is located on the top center of the instrument panel in the defroster grille.
- contains photovoltaic diodes that are sensitive to sunlight.
- generates small amounts of current across the terminals depending upon the amount of light reaching the photovoltaic diode; therefore the only test that can be carried out is for an internal short circuit, an open circuit or sensor value out-of-range.
- contains an internal diagnostic resistor to allow the dual-zone EATC module to detect a difference between an open circuit and no sunlight.

Control System Outputs

A/C Blower Motor Speed Control

The A/C blower motor speed control is located on the A/C evaporator housing.

- The function of the A/C blower motor speed control is to convert low power signals from the dual electronic automatic temperature control module to a high current, variable ground feed for the blower motor.
- Blower motor speed is infinitely variable and is controlled by the dual electronic automatic temperature control module software.
- A delay function provides a gradual increase or decrease in blower motor speed under all conditions.
- Controls the integral high blower relay which is engaged when maximum fan speed is selected.

Air Inlet Door Mode Door Actuator

The air inlet door mode door actuator is located on the evaporator housing. The air inlet door position determines whether outside or recirculated air is being used.

- The actuator positions the air inlet door on command from the dual-zone EATC module.
- The air inlet door mode door actuator contains a reversible electric motor and a potentiometer.
- A 5-volt signal and ground reference is applied to the ends of the potentiometer. The voltage available

at the wiper indicates the position of the potentiometer. The target position of the actuator is calculated by the dual-zone EATC module and is matched with the wiper voltage of the actuator. The control module will drive the actuator motor in the direction necessary to make the actuator wiper voltage agree with the control module target position.

Defrost Door Mode Door Actuator

The defrost door mode door actuator is located on the plenum chamber. The actuator will position the defrost door fully open during defrost operation, partially open during floor/defrost and floor mode operation and fully closed during all other operations.

- The defrost door actuator positions the defrost door on command from the dual-zone EATC module.
- Operation of the defrost door actuator is the same as the air inlet door.

Panel Door Mode Door Actuator

The panel door mode door actuator is located on the plenum chamber. The actuator operates the panel door. The actuator positions the panel door fully open during panel mode and partially open during floor/panel operation. The door is closed during other operations.

- The panel door actuator positions the panel door on command from the dual-zone EATC module.
- Operation of the panel door actuator is the same as the air inlet door.

Floor Door Mode Door Actuator

The floor door mode door actuator positions the floor door fully open during floor and floor/panel and floor/defrost operations. The door is closed during other operations.

- The floor door mode door actuator positions the floor outlet door on command from the dual-zone EATC module.
- Operation of the floor door actuator is the same as the air inlet door.
- The floor outlet door actuator is in the full open position in OFF mode.

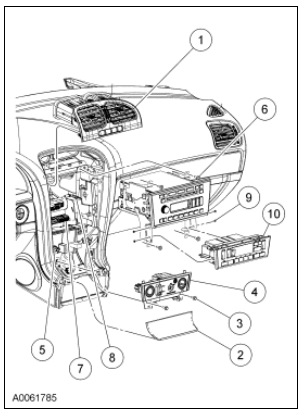
Control Components

Printable View (7 KB)

Refer to Section 412-00 .

Climate Control Assembly

Printable View (67 KB)



Item	Part Number	Description
1	19893C	Center instrument panel register
2	04644	Lower center finish panel
3	W704875	Switch panel screw (2 required)
4	04338F	Switch panel
5	14401	Power point electrical connector
6	W704875	Audio unit screw (4 required)
7	14401	Climate control assembly electrical connector
8	18812	Antenna cable
9		Climate control assembly screw (4 required)
10	19980	Climate control assembly

Removal and Installation

NOTE: If installing a new climate control assembly (dual-zone EATC module), the new module must be configured for the vehicle. For additional information, refer to Section 418-01 .

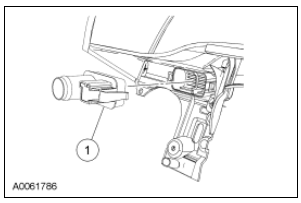
1. Remove the center instrument panel register.
2. Remove the lower center finish panel.
3. Remove the 2 switch panel screws.
4. Remove the switch panel.
5. Disconnect the power point electrical connector.
6. Remove the 4 audio unit screws.
7. Disconnect the climate control assembly electrical connector.
8. Disconnect the antenna cable from the audio unit.
9. Remove the 4 climate control assembly screws.

10. Remove the climate control assembly.

11. To install, reverse the removal procedure.

In-Vehicle Temperature Sensor

Printable View (26 KB)



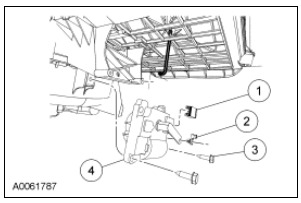
Item	Part Number	Description
1	19C734	In-vehicle temperature sensor

Removal and Installation

1. Remove the instrument cluster finish panel. For additional information, refer to Section 501-12 .
2. Remove the in-vehicle temperature sensor.
3. To install, reverse the removal procedure.

Mode Door Actuator Air Inlet Door

Printable View (34 KB)



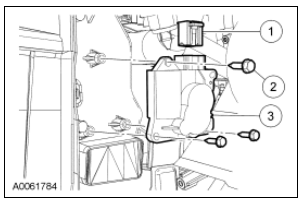
Item	Part Number	Description
1	19D887	Air inlet mode door actuator electrical connector
2	18A481	Air inlet mode door actuator linkage retaining clip
3	W701696-S	Air inlet mode door actuator screw (2 required)
4	19E616	Air inlet mode door actuator

Removal and Installation

1. Remove the RH floor duct.
2. Disconnect the air inlet mode door actuator electrical connector.
3. Remove the air inlet mode door actuator linkage retaining clip.
4. Remove the 2 air inlet mode door actuator screws.
5. Remove the air inlet mode door actuator.
6. To install, reverse the removal procedure.

Mode Door Actuator Floor Door

Printable View (30 KB)



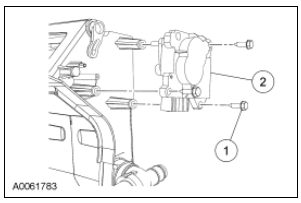
Item	Part Number	Description
1	14401	Floor mode door actuator electrical connector
2	W701696-S	Floor mode door actuator screw (3 required)
3	19E616	Floor mode door actuator

Removal and Installation

1. Remove the LH floor duct.
2. Disconnect the floor mode door actuator electrical connector.
3. Remove the 3 floor mode door actuator screws.
4. Remove the floor mode door actuator.
5. To install, reverse the removal procedure.

Mode Door Actuator Defrost Door

Printable View (26 KB)



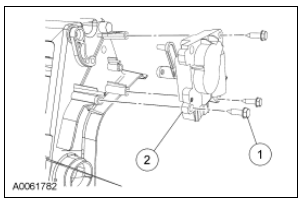
Item	Part Number	Description
1	W701696-S	Defrost door mode door actuator screw (3 required)
2	19E616	Defrost door mode door actuator

Removal and Installation

1. Remove the instrument cluster. For additional information, refer to Section 413-01 .
2. Remove the LH lower instrument panel insulator.
3. Remove the 3 defrost door mode door actuator screws.
4. Remove the defrost door mode door actuator.
5. To install, reverse the removal procedure.

Mode Door Actuator Panel Door

Printable View (28 KB)



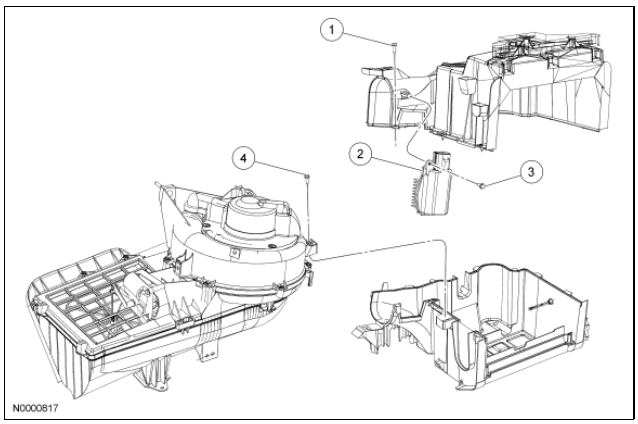
Item	Part Number	Description
1	W701696-S	Panel door mode door actuator screw (3 required)
2	19E616	Panel door mode door actuator

Removal and Installation

1. Remove the instrument panel. For additional information, refer to Section 501-12 .
2. Remove the 3 panel door mode door actuator screws.
3. Remove the panel door mode door actuator.
4. To install, reverse the removal procedure.

Blower Motor Speed Control

Printable View (162 KB)

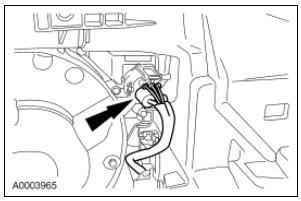


Item	Part Number	Description
1	W705314	Lower heater core and evaporator core housing to air inlet duct screw
2	19E624	Blower motor speed control
3	W705314	Blower motor speed control screw
4	W705314	Upper heater core and evaporator core housing to air inlet duct screw

Removal and Installation

1. Remove the heater core and evaporator core housing. For additional information, refer to Section 412-02 .

2. Disconnect the blower motor speed control electrical connector.

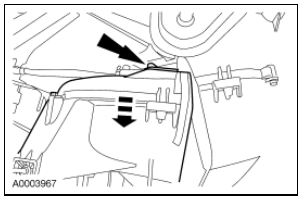


3. Remove the lower heater core and evaporator core housing to air inlet duct screw.

4. Remove the upper heater core and evaporator core housing to air inlet duct screw.

5. Remove the blower motor speed control screw.

6. Disengage the clip, separate the air inlet and evaporator housings and remove the blower motor speed control.



7. To install, reverse the removal procedure.

Dual Coolant Flow Valve

Instrument Cluster and Panel Illumination

Printable View (7 KB)

The instrument cluster and panel illumination is used to provide backlighting to the instrument panel, switches and control components when the headlamp switch is in either the parking lamp ON or headlamp ON position. The level of intensity is adjustable by rotating the instrument panel dimmer switch either up to increase intensity or down to decrease intensity.

Instrument Cluster and Panel Illumination

Printable View (407 KB)

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adaptors, or equivalent diagnostic tool

Principles of Operation

Instrument Cluster and Panel Lighting Dimmable

The instrument panel dimmer switch allows the brightness level of the backlights and displays to be adjusted dependent upon the headlamp switch position and the instrument panel dimmer switch position. The instrument panel dimmer switch sends a signal to the instrument cluster which then sends a backlighting intensity and dimming curve command over the standard corporate protocol (SCP) communication network to the front electronic module (FEM). The FEM then sends a pulse width modulated (PWM) dimming signal to the instrument cluster, the dimmable light emitting diodes (LEDs), and the dimmable incandescent bulbs.

When the headlamp switch is in the parking lamp ON, headlamp ON, or the autolamp ON position and the autolamp feature is active, synchronized dimming of the dimmable components can be controlled with the instrument panel dimmer switch.

All backlighting is disabled when the battery saver function has been activated.

Fault Management

The dimmable backlighting defaults to 100% intensity if an instrument panel dimmer switch failure occurs.

Inspection and Verification

NOTE: The instrument cluster and FEM must be configured upon installation. Refer to Section 418-01 .

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Instrument panel dimmer switch	• Central junction box (CJB) fuse(s): ♦ 4 (5A) ♦ 13 (5A) ♦ 17 (5A) ♦ 20 (10A) ♦ 33 (10A) • Battery junction box (BJB) fuse(s): ♦ 22 (20A) ♦ 25 (40A) • Bulb(s) • Connectors • Central junction box (CJB) • Interior auxiliary junction box • Joint connector 3 • Instrument cluster • Front electronic module (FEM) • Instrument panel dimmer switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the FEM, refer to Section 418-00 .
   - No response/not equipped for the instrument cluster, refer to Section 413-01 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out the self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved are related to the concern, refer to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

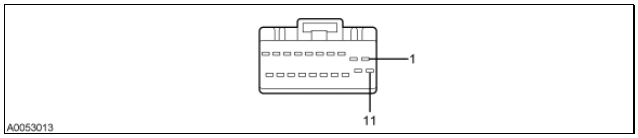
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1246	Dim Panel Potentiometer Switch Circuit Failure	Instrument Cluster	Go To Pinpoint Test E .
B1342	ECU is defective	Instrument Cluster	DOCUMENT and CLEAR the DTCs. REPEAT the self-test. IF DTC 1342 is received again, INSTALL a new instrument cluster. REFER to Section 413-01 .
B2477	Module Configuration Failure	Instrument Cluster	REFER to Section 418-01 .
All Other DTCs		Instrument Cluster	REFER to Section 419-10 .

Symptom Chart

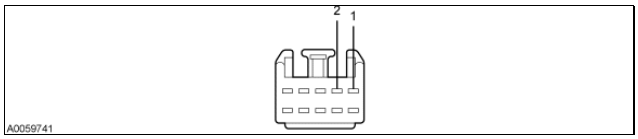
Symptom Chart
Connector Circuit Reference

Front Electronic Module (FEM) C201f



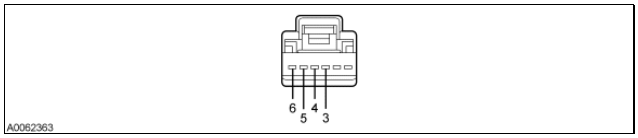
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-DK22 (OG/YE) B+ voltage feed circuit	0 volts with the ignition switch in the OFF position, greater than 10 volts with the ignition switch in the ON position. Less than 5 ohms between the front electronic module (FEM) and the interior auxiliary junction box, with the ignition switch in the OFF position, . Greater than 10,000 ohms between the FEM and ground, with the ignition switch in the OFF position.
11	64S-LH5 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the FEM and the interior auxiliary junction box. Greater than 10,000 ohms between the FEM and ground.

Headlamp Switch C205



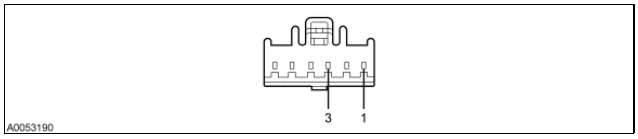
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-LH26 (BK) illumination ground	0 volts, less than 5 ohms between the headlamp switch and ground.
2	64S-LH26 (BU/BK) dimmable backlighting power supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the headlamp switch and the joint connector 3. Greater than 10,000 ohms between the headlamp switch and ground.

Instrument Panel Dimmer Switch C206



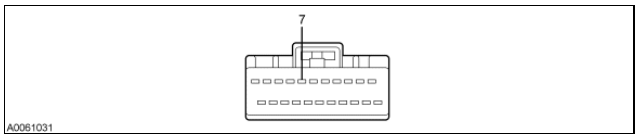
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	64S-LE10 (BU/YE) dimmable backlighting voltage supply	0 volts with headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the dimmer switch and the joint connector 3.
4	9-LE10 (BN/YE) signal return circuit	0 volts, less than 5 ohms between the instrument panel dimmer switch and ground.
5	10-LE10 (GY/BK) illumination ground	0 volts, less than 5 ohms between the instrument panel dimmer switch and instrument cluster. Greater than 10,000 ohms between the dimmer switch and ground.
6	8-LE10 (WH/BK) signal circuit	5 volts with the headlamp switch in the PARK/ON positions. Less than 5 ohms between the instrument panel dimmer switch and the instrument cluster. Greater than 10,000 ohms between the instrument panel dimmer switch and ground.

Clockspring C218b



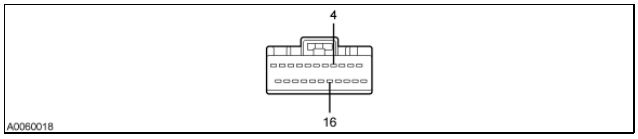
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	64-LK18 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the clockspring and the joint connector 3. Greater than 10,000 ohms between the clockspring and ground.
3 (Premium Audio and Navigation)	31S-PG1 (BK/BU) ground	0 volts, less than 5 ohms between the clockspring and ground.
3 (CDX6 Audio)	31S-PG24 (BK/OG) ground	0 volts, less than 5 ohms between the clockspring and ground.

Instrument Cluster C220a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	64S-LK29 (BU/RD) dimmable backlighting voltage supply to the instrument cluster	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the instrument cluster. Greater than 10,000 ohms between the joint connector 3 and ground.

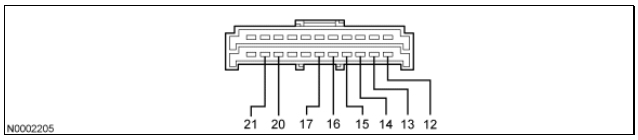
Instrument Cluster C220c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	9-LE10 (BN/YE) sensor signal return	0 volts, less than 5 ohms between the instrument cluster and the dimmer switch

		module. Greater than 10,000 ohms between the instrument cluster and ground.
16	8-LE10 (WH/BK) 5 volt reference signal	0 volts with the headlamps in the OFF position. 5 volts with the headlamps in the PARK/ON positions.

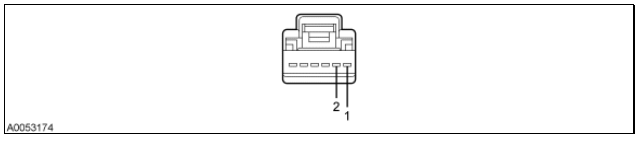
Joint Connector 3 C224



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	64S-LE10 (BU/YE) dimmable backlighting voltage supply to the dimmer switch	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the dimmer switch. Greater than 10,000 ohms between the joint connector 3 and ground.
13	64S-LK1 (BU/RD) dimmable backlighting voltage	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the interior auxiliary junction box. Greater than 10,000 ohms between the joint connector 3 and ground.
14	64S-AL19 (BU/BK) dimmable backlighting voltage supply to the adjustable pedal switch	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the adjustable pedal switch. Greater than 10,000 ohms between the joint connector 3 and ground.
15	64S-LK29 (BU/RD) dimmable backlighting voltage supply to the instrument cluster	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the instrument cluster. Greater than 10,000 ohms between

		the joint connector 3 and ground.
16	64-LK18 (BU/RD) dimmable backlighting voltage supply to the steering wheel speed control switch(es)	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the steering wheel speed control switch(es). Greater than 10,000 ohms between the joint connector 3 and ground.
17	64S-LK34 (BU/BK) dimmable backlighting voltage supply to the navigation radio	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the navigation radio. Greater than 10,000 ohms between the joint connector 3 and ground.
20	64S-LH26 (BU/BK) dimmable backlighting voltage supply to the headlamp switch	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the headlamp switch. Greater than 10,000 ohms between the joint connector 3 and ground.
21	64S-GG25 (BU/OG) dimmable backlighting voltage supply to the message center switch	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the joint connector 3 and the message center switch. Greater than 10,000 ohms between the joint connector 3 and ground.

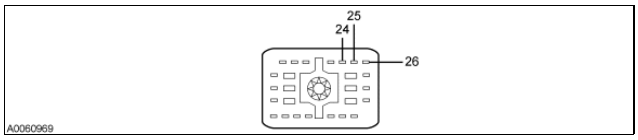
Message Center Switch C253



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1		

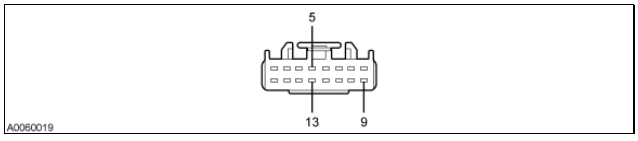
	64S-GG25 (BU/OG) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the message center switch and the joint connector 3. Greater than 10,000 ohms between the message center switch and ground.
2	31-GG25 (BK) illumination ground	0 volts, less than 5 ohms between the message center switch and ground.

Central Junction Box (CJB) C270d



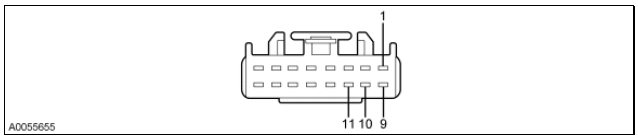
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
24	64S-AD2 (BU/RD) dimmable backlighting voltage supply to the central junction box (CJB)	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the CJB and the interior auxiliary junction box. Greater than 10,000 ohms between the CJB and ground.
25	64S-LH2 (BU/RD) dimmable backlighting voltage supply to the passenger side front window control switch and door lock control switches	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the central junction box (CJB) and the passenger window switch or passenger door lock switch. Greater than 10,000 ohms between the CJB and ground.
26	64S-LH33 (BU/BK) dimmable backlighting voltage supply to the passenger side rear power window control and heated seat switches	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the CJB and the right rear window switch or right rear heated seat switch. Greater than 10,000 ohms between the CJB and ground.

Interior Auxiliary Junction Box C283a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	64S-LK9 (BU/RD) dimmable backlighting power supply to the following: cigar lighter illumination bulb, transmission selector lever illumination bulb, traction control, parking aid and electronic park brake release switches.	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the following: cigar lighter illumination bulb, transmission selector lever illumination bulb, traction control, parking aid, and electronic park brake release switches.
9	64S-LH5 (BU/RD) dimmable backlighting voltage supply from the front electronic module (FEM).	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the FEM. Greater than 10,000 ohms between the FEM and ground.
13	64S-LH4 (BU/RD) dimmable backlighting voltage supply from the FEM.	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box C283a and C283b. Greater than 10,000 ohms between the front electronic module (FEM) and ground.

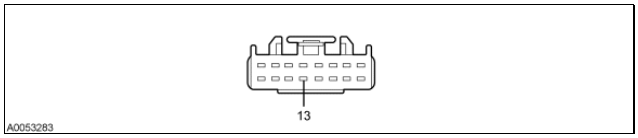
Interior Auxiliary Junction Box C283b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	64S-LH1 (BU/RD) dimmable backlighting voltage supply to the following switches: mirror, memory set, driver side window, and door lock.	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the following switches: mirror, memory set, driver side window, and door lock. Greater than 10,000 ohms between the interior auxiliary junction box and ground.
9	64S-LH4 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box C283a and

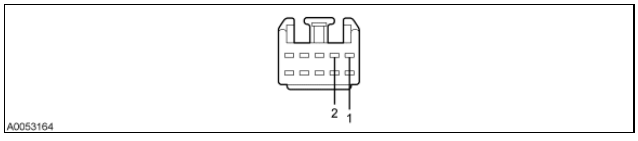
		C283b. Greater than 10,000 ohms between the interior auxiliary junction box and ground.
10	64S-LH16 (BU/WH) dimmable backlighting voltage supply to the driver side rear power window control and heated seat switches	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the driver side rear power window and heated seat switches. Greater than 10,000 ohms between the interior auxiliary junction box and ground.
11	64S-AD2 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the central junction box (CJB). Greater than 10,000 ohms between the interior auxiliary junction box and ground.

Interior Auxiliary Junction Box C283d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
13	64S-LK1 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the interior auxiliary junction box and the joint connector 3. Greater than 10,000 ohms between the interior auxiliary junction box and ground.

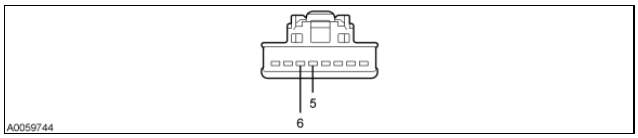
Transmission Selector Lever C307



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	64S-LK21 (BU/BK) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch

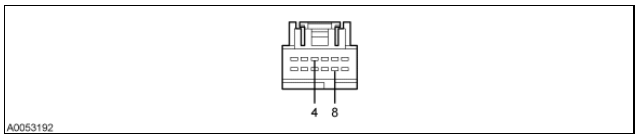
		position. Less than 5 ohms between the transmission selector lever illumination and the interior auxiliary junction box. Greater than 10,000 ohms between the transmission selector lever illumination and ground.
2	31-LK21 (BK/GN) ground	0 volts, less than 5 ohms between the transmission selector lever illumination ground.

Memory Set Switch C503



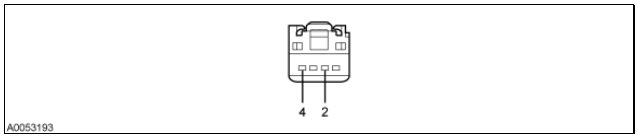
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31-AH27 (BK) ground	0 volts, less than 5 ohms between the memory set switch and ground.
6	64S-AH27 (BU) dimmable backlighting voltage supply	0 volts with headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the memory set switch and the interior auxiliary junction box. Greater than 10,000 ohms between the memory set switch and ground.

LH Front Window Control Switch C504a



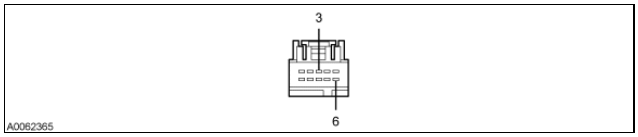
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	64S-LH14 (BU) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the LH front window control switch and the interior auxiliary junction box. Greater than 10,000 ohms between the LH front window control switch and ground.
8	31-AJ7 (BK/BU) ground	0 volts, less than 5 ohms between the LH front window control switch and ground.

Door Lock Control Switch C505 (LH Front) or C605 (RH Front)



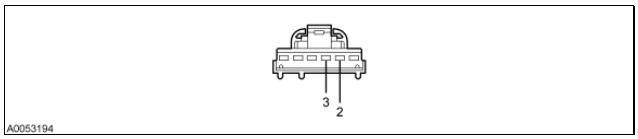
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
(C505) 2	64S-LH28 (BU) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the LH front door lock control switch and the interior auxiliary junction box. Greater than 10,000 ohms between the LH front door lock control switch and ground.
(C505) 4	31-LH28 (BK) ground	0 volts, less than 5 ohms between the LH front door lock control switch and ground.
(C605) 2	64S-LH42 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the RH front door lock control switch and the central junction box (CJB). Greater than 10,000 ohms between the RH front door lock control switch and ground.
(C605) 4	31-LH42 (BK) ground	0 volts, less than 5 ohms between the RH front door lock control switch and ground.

Exterior Mirror Control Switch C527



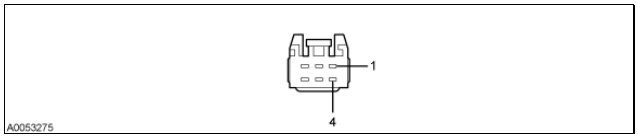
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31-AD12 (BK/YE) illumination ground	0 volts, less than 5 ohms between the exterior mirror control switch and ground.
6	64S-LH50 (BU/YE) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the exterior mirror control switch and the interior auxiliary junction box. Greater than 10,000 ohms between the exterior mirror control switch and ground.

RH Front Window Control Switch C604



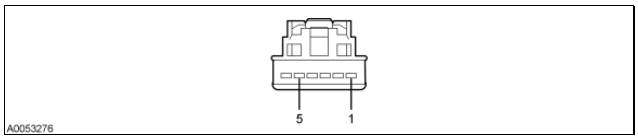
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	64S-LH31 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the RH front window control switch and the central junction box (CJB). Greater than 10,000 ohms between the RH front window control switch and ground.
3	31-LH31 (BK) ground	0 volts, less than 5 ohms between the RH front window control switch and ground.

Window Control Switch C701 (LH Rear) and C801 (RH Rear)



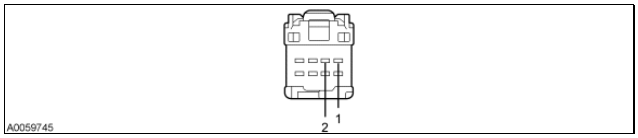
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
(C701) 1	31-LH16 (BK/OG) ground	0 volts, less than 5 ohms between the LH rear window control switch and ground.
(C701) 4	64S-LH16A (BU/WH) without heated seats or 64S-LH16A (BU/WH) with heated seats dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the LH rear window control switch and the interior auxiliary junction box. Greater than 10,000 ohms between the LH rear window control switch and ground.
(C801) 1	31-LH33 (BK/GN) ground	0 volts, less than 5 ohms between the RH rear window control switch and ground.
(C801) 4	64S-LH33A (BU/BK) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the RH rear window control switch and the central junction box (CJB). Greater than 10,000 ohms between the RH rear window control switch and ground.

Heated Seat Switch C722 (LH Rear) or C822 (RH Rear)



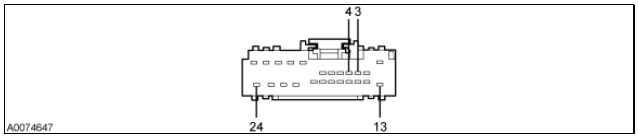
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
(C722) 1	31-HC15 (BK/YE) ground	0 volts, less than 5 ohms between the LH rear heated seat switch and ground.
(C722) 5	64S-LH15 (BU) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the LH rear heated seat switch and the interior auxiliary junction box. Greater than 10,000 ohms between the LH rear heated seat switch and ground.
(C822) 1	31-HC18 (BK/GN) ground	0 volts, less than 5 ohms between the RH rear heated seat switch and ground.
(C822) 5	64S-LH32 (BU/RD) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the RH rear heated seat switch and the central junction box (CJB). Greater than 10,000 ohms between the RH rear heated seat switch and ground.

Adjustable Pedal Switch C2089



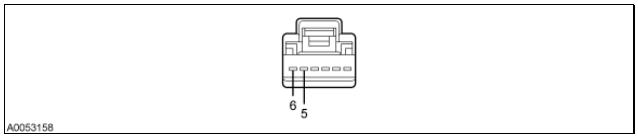
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-AL19 (BK/GN) ground	0 volts, less than 5 ohms between the adjustable pedal switch and ground.
2	64S-AL19 (BU/BK) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the adjustable pedal switch and the joint connector 3. Greater than 10,000 ohms between the adjustable pedal switch and ground.

Navigation Audio Unit (if equipped) C2253a



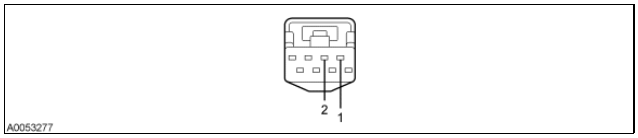
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	64S-LK34 (BU/BK) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the navigation audio unit and the joint connector 3. Greater than 10,000 ohms between the navigation audio unit and ground.
4	31-LK34 (BK/GN) ground	0 volts, less than 5 ohms between the navigation audio unit and ground.
13	31-MD15B (BK/GN) ground	0 volts, less than 5 ohms between the navigation audio unit and ground.
24	31-MD15A (BK/GN) ground	0 volts, less than 5 ohms between the navigation audio unit and ground.

Traction Control (TC) Switch C3208



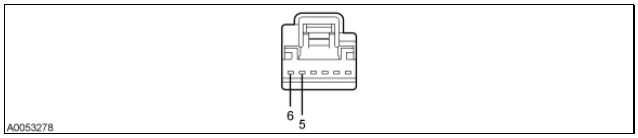
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31-LH45 (BK/WH) ground	0 volts, less than 5 ohms between the traction control (TC) switch and ground.
6	64S-LH45 (BU/OG) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the TC switch and the interior auxiliary junction box. Greater than 10,000 ohms between the TC switch and ground.

Electronic Park Brake Release Switch C3218



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	64S-CG15 (BU/WH) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the electronic park brake release switch and the interior auxiliary junction box. Greater than 10,000 ohms between the electronic park brake release switch and ground.
2	31-CG15 (BK/OG) ground	0 volts, less than 5 ohms between the electronic park brake release switch and ground.

Parking Aid Switch C9011



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31-LH49 (BK/GN) ground	0 volts, less than 5 ohms between the parking aid switch and ground.
6	64S-LH49 (BU/BK) dimmable backlighting voltage supply	0 volts with the headlamp switch in the OFF position. Variable voltage between 0 volts and 10 volts with the headlamp switch in the PARK/ON positions, dependent on the panel dimmer switch position. Less than 5 ohms between the parking aid switch and the interior auxiliary junction box. Greater than 10,000 ohms between the parking aid switch and ground.

Pinpoint Test A: One or More Module-Controlled Illumination Source(s) is Inoperative

Normal Operation

The headlamp switch supplies the instrument cluster with the headlamp switch position status. For additional information on the headlamp switch operation, refer to Section 417-01 . The dimmer switch provides the instrument cluster with the dimmer control status through signal circuit 8-LE10 (WH/BK) and return circuit 9-LE10 (BN/YE). The instrument cluster sends the illumination message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication network, circuits 4-EG8 (GY/VT) and 5-EG8 (BU/WH), based upon the dimmer switch position. The FEM is supplied with illumination voltage through circuit 29S-DK22 (OG/YE) whenever the switched system power (SSP) relay number 2 is energized. When the headlamp switch is in the PARK, HEADLAMP, or AUTOLAMP ON position, the instrument cluster sends the FEM an illumination message and the FEM, in turn, provides pulse width modulation

(PWM) voltage to the interior auxiliary junction box through circuit 64S-LH5 (BU/RD). The interior auxiliary junction box separates the PWM voltage and supplies it to sub-illumination sources through circuits 64S-LH4 (BU/RD), 64S-LH1 (BU/RD), 64S-LK9 (BU/RD), 64S-LH16 (BU/WH), 64S-LK1 (BU/RD), and the central junction box (CJB) through circuit 64S-AD2 (BU/RD). The CJB separates the PWM voltage and also supplies it to sub-illumination sources through circuits 64S-LH2 (BU/RD) and 64S-LH33 (BU/BK). The sub-illumination sources then provide the PWM voltage to the individual illuminating sources.

PINPOINT TEST A: ONE OR MORE MODULE-CONTROLLED ILLUMINATION SOURCE(S) IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK IF ONE OR MORE MODULE-CONTROLLED ILLUMINATION SOURCE(S) IS INOPERATIVE	
• Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • **Is only one illumination component inoperative?**	**Yes** If the DM100i or the CDX6 audio unit is inoperative, INSTALL a new audio unit, REFER to Section 415-01 . For all other individual sources inoperative, GO to A2 . **No** If the LH rear window control switch and the LH rear heated seat switch illumination controls are inoperative, GO to A4 . If the LH front window control switch, the memory set switch, the LH front door lock control switch, and the exterior mirror control switch illumination controls are inoperative, GO to A6 . If the RH front window control switch and the RH front door lock control switch illumination controls are inoperative, GO to A8 . If the RH rear window control switch and the RH rear heated seat switch illumination controls are inoperative, GO to A10 . If the steering wheel controls, the

	instrument panel dimmer switch, the headlamp switch, the message center switch, the instrument cluster, the adjustable pedal switch, the transmission selector lever, the traction control switch, the electronic park brake release switch, and the parking aid switch illumination controls are all inoperative, GO to A14 .
A2 CHECK THE VOLTAGE CIRCUIT TO THE ILLUMINATION SOURCE IN QUESTION	
• Turn the headlamps OFF. • Disconnect the inoperative illumination source connector. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the suspect illumination source, harness side and ground as follows:	**Yes** GO to A3 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

A3 CHECK THE GROUND CIRCUIT TO THE ILLUMINATION SOURCE IN QUESTION

- Key in OFF position.
- Turn the headlamps OFF.
- Measure the resistance between the suspect illumination source, harness side and ground as follows:

Connector and Pin	Circuit
Headlamp Switch C205-1	31-LH26 (BK)
Instrument Panel Dimmer Switch C206-5	10-LE10 (GY/BK)
Clockspring C218b-3	31S-PG1 (BK/BU) (premium and navigation audio) 31S-PG24 (BK/OG) (CDX6 audio)
Message Center C253-2	31-GG25 (BK)
Transmission Selector Lever Illumination C307-2	31-LK21 (BK/GN)
Memory Set Switch C503-5	31-AH27 (BK)
LH Front Window Control Switch C504a-8	31-AJ7 (BK/BU)
LH Front Door Lock Control Switch C505-4	31-LH28 (BK)

Yes
INSTALL a new component as necessary.

No
REPAIR the circuit in question. TEST the system for normal operation.

Exterior Mirror Control Switch C527-3	31-AD12 (BK/YE)
RH Front Window Control Switch C604-3	31-LH31 (BK)
RH Front Door Lock Control Switch C605-4	31-LH42 (BK)
LH Rear Window Control Switch C701-1	31-LH16 (BK/OG)
LH Rear Heated Seat Switch C722-1	31-HC15 (BK/YE)
RH Rear Window Control Switch C801-1	31-LH33 (BK/GN)
RH Rear Heated Seat Switch C822-1	31-HC18 (BK/GN)
Adjustable Pedal Switch C2089-1	31-AL19 (BK/GN)
Navigation Audio Unit C2253a-13, C2253a-24, C2253a-4.	31-MD15B (BK/GN), 31-MD15A (BK/GN), 31-LK34 (BK/GN)
Traction Control Switch C3208-5	31-LH45 (BK/WH)
Electronic Park Brake Release Switch C3218-2	31-CG15 (BK/OG)
Parking Aid Switch C9011-5	31-LH49 (BK/GN)

- **Is the resistance less than 5 ohms?**

A4 CHECK CIRCUIT 64S-LH16A (BU/WH) FOR VOLTAGE	
• Disconnect: LH Rear Window Control Switch C701. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the LH rear window control switch C701-4, circuit 64S-LH16A (BU/WH), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** REPAIR ground circuit 31-LH16 (BK/OG). TEST the system for normal operation. **No** GO to A5 .
A5 CHECK CIRCUIT 64S-LH16 (BU/WH) FOR AN OPEN	

• Turn the headlamps OFF. • Disconnect: Interior Auxiliary Junction Box C283b. • Measure the resistance between the LH rear window control switch C701-4, circuit 64S-LH16A (BU/WH), harness side and the interior auxiliary junction box C283b-10, circuit 64S-LH16 (BU/WH), harness side.  A0060886 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A6 CHECK CIRCUIT 64S-LH14 (BU) FOR VOLTAGE	
• Disconnect: LH Front Window Control Switch C504a. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the LH front window control switch C504a-4, circuit 64S-LH14 (BU), harness side and ground.  A0060887 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 31-LH1 (BK/BU) or 31-AJ7 (BK/BU). TEST the system for normal operation. **No** GO to A7 .
A7 CHECK CIRCUIT 64S-LH1 (BU/RD) FOR AN OPEN	
• Turn the headlamps OFF. • Disconnect: Interior Auxiliary Junction Box C283b. • Measure the resistance between the LH front window control switch C504a-4, circuit 64S-LH14 (BU), harness side and the interior auxiliary junction box C283b-1, circuit 64S-LH1 (BU/RD), harness side.  A0060888 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A8 CHECK CIRCUIT 64S-LH31 (BU/RD) FOR VOLTAGE	

• Disconnect: RH Front Window Control Switch C604. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the RH front window control switch C604-2, circuit 64S-LH31 (BU/RD), harness side and ground.  A0060889 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR ground circuit 31-LH2 (BK/BU) or 31-LH31 (BK). TEST the system for normal operation. **No** GO to A9 .
A9 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR AN OPEN	
• Turn the headlamps OFF. • Disconnect: Central Junction Box (CJB) C270d. • Measure the resistance between the RH front window control switch C604-2, circuit 64S-LH31 (BU/RD), harness side and the CJB C270d-25, circuit 64S-LH2 (BU/RD), harness side.  A0060890 • **Is the resistance less than 5 ohms?**	**Yes** GO to A12 . **No** REPAIR the circuit. TEST the system for normal operation.
A10 CHECK CIRCUIT 64S-LH33A (BU/BK) FOR VOLTAGE	
• Disconnect: RH Rear Window Control Switch C801. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the RH rear window control switch C801-4, circuit 64S-LH33A (BU/BK), harness side and ground.  A0060885 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR ground circuit 31-LH33 (BK/GN). TEST the system for normal operation. **No** GO to A11 .
A11 CHECK CIRCUIT 64S-LH33 (BU/BK) FOR AN OPEN	

• Turn the headlamps OFF. • Disconnect: Central Junction Box (CJB) C270d. • Measure the resistance between the RH rear window control switch C801-4, circuit 64S-LH33A (BU/BK), harness side and the CJB C270d-26, circuit 64S-LH33 (BU/BK), harness side.  A0060891 • **Is the resistance less than 5 ohms?**	**Yes** GO to A12 . **No** REPAIR the circuit. TEST the system for normal operation.
A12 CHECK CIRCUIT 64S-AD2 (BU/RD) FOR VOLTAGE	
• Connect: CJB 270d. • Disconnect: Interior Auxiliary Junction Box C283b. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the interior auxiliary junction box C283b-11, circuit 64S-AD2 (BU/RD), component side and ground.  A0060970 • **Is the voltage greater than 10 volts?**	**Yes** GO to A13 . **No** REPAIR or INSTALL a new interior auxiliary junction box.
A13 CHECK CIRCUIT 64S-AD2 (BU/RD) FOR AN OPEN	
• Turn the headlamps OFF. • Disconnect: CJB C270d. • Measure the resistance between the interior auxiliary junction box C283b-11, circuit 64S-AD2 (BU/RD), harness side and the CJB C270d-24, circuit 64S-AD2 (BU/RD), harness side.  A0060892 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new CJB. **No** REPAIR the circuit. TEST the system for normal operation.
A14 CHECK THE INTERIOR AUXILIARY JUNCTION BOX ILLUMINATION	

• Disconnect: Interior Auxiliary Junction Box C283b. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the interior auxiliary junction box C283b-9, circuit 64S-LH4 (BU/RD), component side and ground.  A0060893 • **Is the voltage greater than 10 volts?**	**Yes** GO to A15 . **No** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation.
A15 CHECK CIRCUIT 64S-LH4 (BU/RD) FOR AN OPEN	
• Turn the headlamps OFF. • Disconnect: Interior Auxiliary Junction Box C283a. • Measure the resistance between the interior auxiliary junction box C283b-9, circuit 64S-LH4 (BU/RD), harness side and the interior auxiliary junction box C283a-13, circuit 64S-LH4 (BU/RD), harness side.  A0060894 • **Is the resistance less than 5 ohms?**	**Yes** GO to A16 . **No** REPAIR the circuit. TEST the system for normal operation.
A16 CHECK THE INTERIOR AUXILIARY JUNCTION BOX FOR AN OPEN	
• Disconnect: Interior Auxiliary Junction Box C283d. • Measure the resistance between the interior auxiliary junction box C283a-13, circuit 64S-LH4 (BU/RD), component side and the interior auxiliary junction box C283d-13, circuit 64S-LK1 (BU/RD), component side; and between the interior auxiliary junction box C283a-13, circuit 64S-LH4 (BU/RD), component side and the interior auxiliary junction box C283a-5, circuit 64S-LK9 (BU/RD), component side.  A0060963 • **Are the resistances less than 5 ohms?**	**Yes** If the adjustable pedal switch, instrument cluster, message center, headlamp switch, instrument panel dimmer switch, steering wheel controls, and navigation audio unit (if equipped) illumination controls are inoperative, GO to A17 . If the transmission selector lever, traction control switch, electronic park brake release switch, and parking aid switch illumination controls are inoperative, REPAIR circuit 64S-LK9 (BU/RD). If the transmission selector lever, cigar lighter, and traction control switch illumination controls are inoperative, REPAIR circuits 31-HA6 (BK/YE), 31-LK21 (BK/GN) and 31-DA1

	(BK/YE). TEST the system for normal operation. **No** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation.
A17 CHECK CIRCUIT 64S-LK1 (BU/RD) FOR OPEN	
• Disconnect: Joint Connector 3 C224. • Measure the resistance between the interior auxiliary junction box C283d-13, circuit 64S-LK1 (BU/RD), harness side, and the joint connector 3 C224-13, circuit 64S-LK1 (BU/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new joint connector 3. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test B: The Control Illumination Is Inoperative

Normal Operation

The headlamp switch supplies the instrument cluster with the headlamp switch position status. The dimmer switch provides the instrument cluster with the dimmer control status through signal circuit 8-LE10 (WH/BK) and return circuit 9-LE10 (BN/YE). The instrument cluster sends the illumination message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication network, circuits 4-EG8 (GY/VT) and 5-EG8 (BU/WH), based upon the dimmer switch position. The FEM is supplied with illumination voltage through circuit 29S-DK22 (OG/YE) whenever the switched system power (SSP) is energized. When the headlamp switch is in the PARK, HEADLAMP, or AUTOLAMP ON position, the instrument cluster sends the FEM an illumination message and the FEM, in turn, provides pulse width modulation (PWM) voltage to the interior auxiliary junction box through circuit 64S-LH5 (BU/RD). The interior auxiliary junction box separates the PWM voltage and supplies it to sub-illumination sources through circuits 64S-LH4 (BU/RD), 64S-LH1 (BU/RD), 64S-LK9 (BU/RD), 64S-LH16 (BU/WH), 64S-LK1 (BU/RD), and the central junction box (CJB) through circuit 64S-AD2 (BU/RD). The CJB separates the PWM voltage and also supplies it to the sub-illumination sources through circuits 64S-LH2 (BU/RD) and 64S-LH33 (BU/BK). The sub-illumination sources then provide the PWM voltage to the individual illuminating sources.

Possible Causes

- circuit 29S-DK22 (OG/YE) open or short to ground
- circuit 64S-AD2 (BU/RD) short to ground
- circuit 64S-AH27 (BU) short to ground
- circuit 64S-AL19 (BU/BK) short to ground
- circuit 64S-CG15 (BU/WH) short to ground
- circuit 64S-GG25 (BU/OG) short to ground
- circuit 64S-LE10 (BU/YE) short to ground
- circuit 64S-LH1 (BU/RD) short to ground
- circuit 64S-LH2 (BU/RD) short to ground
- circuit 64S-LH3 (BU/WH) short to ground

- circuit 64S-LH4 (BU/RD) short to ground
- circuit 64S-LH5 (BU/RD) open or short to ground
- circuit 64S-LH14 (BU) short to ground
- circuit 64S-LH15 (BU) short to ground
- circuit 64S-LH16 (BU/WH) short to ground
- circuit 64S-LH16A (BU/WH) short to ground
- circuit 64S-LH26 (BU/BK) short to ground
- circuit 64S-LH28 (BU) short to ground
- circuit 64S-LH31 (BU/RD) short to ground
- circuit 64S-LH32 (BU/RD) short to ground
- circuit 64S-LH33A (BU/BK) short to ground
- circuit 64S-LH33 (BU/BK) short to ground
- circuit 64S-LH42 (BU/RD) short to ground
- circuit 64S-LH45 (BU/OG) short to ground
- circuit 64S-LH49 (BU/BK) short to ground
- circuit 64S-LH50 (BU/YE) short to ground
- circuit 64-LK18 (BU/RD) short to ground
- circuit 64S-LK1 (BU/RD) short to ground
- circuit 64S-LK9 (BU/RD) short to ground
- circuit 64S-LK11 (BU) short to ground
- circuit 64S-LK21 (BU/BK) short to ground
- circuit 64S-LK29 (BU/RD) short to ground
- circuit 64S-LK34 (BU/BK) short to ground
- CJB
- interior auxiliary junction box
- instrument cluster
- FEM

PINPOINT TEST B: THE CONTROL ILLUMINATION IS INOPERATIVE

Test Step	Result / Action to Take
B1 CHECK CIRCUIT 64S-LH5 (BU/RD) FOR VOLTAGE	
• Disconnect: Interior Auxiliary Junction Box C283a. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and ground.  A0059726 • **Is the voltage greater than 10 volts?**	**Yes** GO to B2 . **No** GO to B12 .
B2 CHECK THE INTERIOR AUXILIARY JUNCTION BOX FOR OPEN OR SHORT TO GROUND	

• Turn the headlamps OFF. • Disconnect: Interior Auxiliary Junction Box C283b. • Disconnect: Interior Auxiliary Junction Box C283d. • Measure the resistance between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), component side and the interior auxiliary junction box C283b-9, circuit 64S-LH4 (BU/RD), component side; and between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), component side and ground.  A0059759 • **Is the resistance less than 5 ohms between the interior auxiliary junction box pins, and greater than 10,000 ohms between the interior auxiliary junction box and ground?**	**Yes** GO to B3 . **No** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation.
B3 CHECK CIRCUIT 64S-LH4 (BU/RD) FOR A SHORT TO GROUND	
• Measure the resistance between the interior auxiliary junction box C283b-9, circuit 64S-LH4 (BU/RD), harness side and ground.  A0059728 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B4 . **No** REPAIR the circuit. TEST the system for normal operation.
B4 CHECK THE INTERIOR AUXILIARY JUNCTION BOX FOR A SHORT TO GROUND	
• Measure the resistance between the interior auxiliary junction box C283a-13, circuit 64S-LH4 (BU/RD), component side and ground.  A0059760 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B5 . **No** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation.
B5 CHECK CIRCUIT 64S-LK9 (BU/RD) FOR A SHORT TO GROUND	

• Connect a fused (5A) jumper wire between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and the interior auxiliary junction box C283a-5, circuit 64S-LK9 (BU/RD), harness side.  A0059761 • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Monitor the cigar lighter, transmission selector lever, traction control (TC) switch, electronic park brake release switch, and parking aid switch. • **Do the cigar lighter, transmission selector lever, TC switch, electronic park brake release switch, and parking aid switch illuminate?**	**Yes** GO to B6 . **No** REPAIR the followings circuit(s): 64S-LK11 (BU), 64S-LK21 (BU/BK), 64S-LH3 (BU/WH), 64S-LH45 (BU/OG), 64S-CG15 (BU/WH), 64S-LH49 (BU/BK), or 64S-LK9 (BU/RD) for a short to ground. TEST the system for normal operation.
B6 CHECK THE ILLUMINATION POWER SUPPLY FOR A SHORT TO GROUND	
• Turn the headlamps OFF. • Connect a fused (5A) jumper wire between the interior auxiliary junction box C283a-9, circuit 64S-LH4 (BU/RD), harness side and the interior auxiliary junction box C283d-13, circuit 64S-LK1 (BU/RD), harness side.  A0059758 • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Monitor the adjustable pedal switch, navigation audio unit, instrument cluster, message center, headlamp switch, instrument panel dimmer switch, and the steering wheel controls. • **Do the adjustable pedal switch, navigation audio unit, instrument cluster, message center, headlamp switch, instrument panel dimmer switch, and the steering wheel controls illuminate?**	**Yes** GO to B7 . **No** REPAIR the following circuit(s): 64S-LK1 (BU/RD), 64S-AL19 (BU/BK), 64S-LK34 (BU/BK), 64S-LK29 (BU/RD), 64S-GG25 (BU/OG), 64S-LH26 (BU/BK), 64S-LE10 (BU/YE), or 64-LK18 (BU/RD) for a short to ground. TEST the system for normal operation.
B7 CHECK CIRCUIT 64S-AD2 (BU/RD) FOR A SHORT TO GROUND	
• Turn the headlamps OFF. • Disconnect: Central Junction Box (CJB) C270d. • Measure the resistance between the interior auxiliary junction box C283b-11, circuit 64S-AD2 (BU/RD),	**Yes** GO to B8 . **No** REPAIR the circuit. TEST the

harness side and ground.  A0059757 • **Is the resistance greater than 10,000 ohms?**	system for normal operation.
B8 CHECK THE LH REAR HEATED SEAT SWITCH AND LH REAR WINDOW CONTROL SWITCH ILLUMINATION	
• Connect: CJB 270d. • Connect a fused (5A) jumper wire between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and the interior auxiliary junction box C283b-10, circuit 64S-LH16 (BU/WH), harness side.  A0059730 • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Monitor the LH rear heated seat switch and LH rear window control switch illumination. • **Do the LH rear heated seat switch and the LH rear window control switch illumination operate?**	**Yes** GO to B9 . **No** REPAIR the following circuit(s): 64S-LH16 (BU/WH), 64S-LH16A (BU/WH), or 64S-LH15 (BU) for a short to ground. TEST the system for normal operation.
B9 CHECK THE LH FRONT SWITCH ILLUMINATION	
• Turn the headlamps OFF. • Connect a fused (5A) jumper wire between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and the interior auxiliary junction box C283b-1, circuit 64S-LH1 (BU/RD), harness side.  A0059729 • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Monitor the LH front door window control switch, LH front door lock control switch, memory set switch, and exterior mirror control switch illumination.	**Yes** GO to B10 . **No** REPAIR the following circuit(s): 64S-LH1 (BU/RD), 64S-LH14 (BU), 64S-AH27 (BU), 64S-LH28 (BU), or 64S-LH50 (BU/YE) for a short to ground. TEST the system for normal operation.

• **Do the LH front door window control switch, LH front door lock control switch, memory set switch, and exterior mirror control switch illumination operate?**	
B10 CHECK THE RH FRONT LOCK SWITCH AND RH FRONT WINDOW CONTROL SWITCH ILLUMINATION	
• Turn the headlamps OFF. • Connect: CJB C270d. • Disconnect: RH Front Door C611. • Connect a fused (5A) jumper wire between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and the interior auxiliary junction box C283b-11, circuit 64S-AD2 (BU/RD), harness side.  A0060966 • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Monitor the passenger window switch and passenger door lock switch illumination. • **Do the passenger window switch, and passenger door lock switch illumination operate?**	**Yes** REPAIR the following circuit(s): 64S-LH2 (BU/RD), 64S-LH31 (BU/RD), or 64S-LH42 (BU/RD) for a short to ground. TEST the system for normal operation. **No** GO to B11 .
B11 CHECK THE CENTRAL JUNCTION BOX (CJB) FOR A SHORT TO GROUND	
• Turn the headlamps OFF. • Disconnect: CJB C270d. • Measure the resistance between the CJB C270d-24, circuit 64S-AD2 (BU/RD), component side and ground.  A0060967 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR the following circuit(s): 64S-LH33 (BU/BK), 64S-LH33A (BU/BK), and/or 64S-LH32 (BU/RD) for a short to ground. TEST the system for normal operation. **No** REPAIR or INSTALL a new CJB. TEST the system for normal operation.
B12 CHECK CIRCUIT 29S-DK22 (OG/YE) FOR VOLTAGE	
• Turn the headlamps OFF. • Disconnect: Front Electronic Module (FEM) C201f. • Measure the voltage between the FEM C201f-1, circuit 29S-DK22 (OG/YE), harness side and ground.	**Yes** GO to B13 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0004436 • **Is the voltage greater than 10 volts?**	
B13 CHECK CIRCUIT 64S-LH5 (BU/RD) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and the FEM C201f-11, circuit 64S-LH5 (BU/RD), harness side; and between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and ground.  A0060968 • **Is the resistance less than 5 ohms between the interior auxiliary junction box and the FEM, and greater than 10,000 ohms between the interior auxiliary junction box and ground?**	**Yes** GO to B14 . **No** REPAIR the circuit. TEST the system for normal operation.
B14 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. If the control illumination is still inoperative, GO to B15 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

B15 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

	REPEAT the self-test.

Pinpoint Test C: The Control Illumination Is Always On

Normal Operation

The headlamp switch supplies the instrument cluster with the headlamp switch position status. The dimmer switch provides the instrument cluster with the dimmer control status through signal circuit 8-LE10 (WH/BK) and return circuit 9-LE10 (BN/YE). The instrument cluster sends the illumination message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication network, circuits 4-EG8 (GY/VT) and 5-EG8 (BU/WH), based upon the dimmer switch position. The FEM is supplied with illumination voltage through circuit 29S-DK22 (OG/YE) whenever the switched system power (SSP) is energized. When the headlamp switch is in the PARK, HEADLAMP, or AUTOLAMP ON position, the instrument cluster sends the FEM an illumination message and the FEM, in turn, provides a pulse width modulation (PWM) voltage to the interior auxiliary junction box through circuit 64S-LH5 (BU/RD). The interior auxiliary junction box separates the PWM voltage and supplies it to sub-illumination sources through circuits 64S-LH4 (BU/RD), 64S-LH1 (BU/RD), 64S-LK9 (BU/RD), 64S-LH16 (BU/WH), 64S-LK1 (BU/RD), and the central junction box (CJB) through circuit 64S-AD2 (BU/RD). The CJB separates the PWM voltage and also supplies it to the sub-illumination sources through circuits 64S-LH2 (BU/RD) and 64S-LH33 (BU/BK). The sub-illumination sources then provide the PWM voltage to the individual illuminating sources. If the dimmer switch signal and return circuits or the dimmer switch are open, the instrument cluster defaults the FEM to maximum intensity.

Possible Causes

- circuit 64-LK18 (BU/RD) short to voltage
- circuit 64S-AD2 (BU/RD) short to voltage
- circuit 64S-AH27 (BU) short to voltage
- circuit 64S-AL19 (BU/BK) short to voltage
- circuit 64S-CG15 (BU/WH) short to voltage
- circuit 64S-GG25 (BU/OG) short to voltage
- circuit 64S-LE10 (BU/YE) short to voltage
- circuit 64S-LH1 (BU/RD) short to voltage
- circuit 64S-LH2 (BU/RD) short to voltage
- circuit 64S-LH3 (BU/WH) short to voltage
- circuit 64S-LH4 (BU/RD) short to voltage
- circuit 64S-LH5 (BU/RD) short to voltage
- circuit 64S-LH14 (BU) short to voltage
- circuit 64S-LH15 (BU) short to voltage
- circuit 64S-LH16 (BU/WH) short to voltage
- circuit 64S-LH16A (BU/WH) short to voltage
- circuit 64S-LH26 (BU/BK) short to voltage
- circuit 64S-LH28 (BU) short to voltage
- circuit 64S-LH31 (BU/RD) short to voltage
- circuit 64S-LH32 (BU/RD) short to voltage
- circuit 64S-LH33A (BU/BK) short to voltage
- circuit 64S-LH33 (BU/BK) short to voltage
- circuit 64S-LH42 (BU/RD) short to voltage
- circuit 64S-LH45 (BU/OG) short to voltage
- circuit 64S-LH49 (BU/BK) short to voltage
- circuit 64S-LH50 (BU/YE) short to voltage
- circuit 64S-LK1 (BU/RD) short to voltage
- circuit 64S-LK9 (BU/RD) short to voltage
- circuit 64S-LK11 (BU) short to voltage
- circuit 64S-LK21 (BU/BK) short to voltage

- circuit 64S-LK29 (BU/RD) short to voltage
- circuit 64S-LK34 (BU/BK) short to voltage
- CJB
- interior auxiliary junction box
- joint connector 3
- FEM

PINPOINT TEST C: THE CONTROL ILLUMINATION IS ALWAYS ON

Test Step	Result / Action to Take
C1 CHECK THE OPERATION OF THE FRONT ELECTRONIC MODULE (FEM)	
• Disconnect: Front Electronic Module (FEM) C201f. • **Does the illumination go out?**	**Yes** GO to C12 . **No** GO to C2 .
C2 CHECK CIRCUIT 64S-LH5 (BU/RD) FOR A SHORT TO VOLTAGE	
• Disconnect: Interior Auxiliary Junction Box C283a. • Measure the voltage between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), harness side and ground.  A0059726 • **Is any voltage indicated?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to C3 .
C3 CHECK THE INTERIOR AUXILIARY JUNCTION BOX FOR A SHORT TO VOLTAGE	
• Disconnect: Interior Auxiliary Junction Box C283b. • Disconnect: Interior Auxiliary Junction Box C283d. • Measure the voltage between the interior auxiliary junction box C283a-9, circuit 64S-LH5 (BU/RD), component side and ground.  A0060893	**Yes** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation. **No** If the instrument cluster and instrument panel switches remain illuminated, GO to C4 . If the door and window switches remain illuminated, GO to C7 .

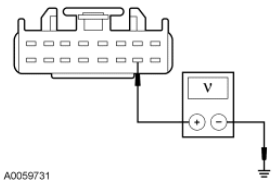
• **Is any voltage indicated?**	
C4 CHECK THE SUPPLY CIRCUIT 64S-LH4 (BU/RD) FOR A SHORT TO VOLTAGE	
• Measure the voltage between the interior auxiliary junction box C283b-9, circuit 64S-LH4 (BU/RD), harness side and ground.  A0059726 • **Is any voltage indicated?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to C5 .
C5 CHECK THE ILLUMINATION SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE	
• Measure the voltage between the interior auxiliary junction box C283a-13, circuit 64S-LH4 (BU/RD), component side and ground.  A0061963 • **Is any voltage indicated?**	**Yes** REPAIR or INSTALL a new interior auxiliary junction box. TEST the system for normal operation. **No** GO to C6 .
C6 CHECK THE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: Joint Connector 3 C224. • Measure the voltage between the joint connector 3 C224, harness side and ground as follows: **Joint Connector 3** / **Circuit** / **Component** C224-16 / 64-LK18 (BU/RD) / Steering wheel switch C224-12 / 64S-LE10 (BU/YE) / Instrument panel dimmer switch C224-20 / 64S-LH26 (BU/BK) / Headlamp switch C224-21 / 64S-GG25 (BU/OG) / Message center switch	**Yes** REPAIR the circuit(s) in question for short to voltage. TEST the system for normal operation. **No** REPAIR or INSTALL a new joint connector 3.

C224-15	64S-LK29 (BU/RD)	Instrument cluster
C224-17	64S-LK34 (BU/BK)	Navigation audio unit
C224-14	64S-AL19 (BU/BK)	Adjustable pedal switch
C224-13	64S-LK1 (BU/RD)	Illumination supply

- **Is any voltage indicated?**

C7 CHECK CIRCUIT 64S-LH16 (BU/WH) FOR A SHORT TO VOLTAGE

- Measure the voltage between the interior auxiliary junction box C283b-10, circuit 64S-LH16 (BU/WH), harness side and ground.



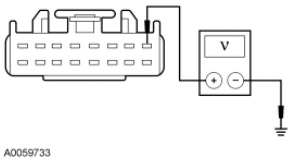
- **Is any voltage indicated?**

Yes
REPAIR the following circuit(s): 64S-LH16 (BU/WH), 64S-LH16A (BU/WH), or 64S-LH15 (BU) for a short to voltage. TEST the system for normal operation.

No
GO to C8 .

C8 CHECK CIRCUIT 64S-LH1 (BU/RD) FOR A SHORT TO VOLTAGE

- Measure the voltage between the interior auxiliary junction box C283b-1, circuit 64S-LH1 (BU/RD), harness side and ground.



- **Is any voltage indicated?**

Yes
REPAIR the following circuit(s): 64S-LH1 (BU/RD), 64S-LH14 (BU), 64S-AH27 (BU), 64S-LH28 (BU), or 64S-LH50 (BU/YE) for a short to voltage. TEST the system for normal operation.

No
GO to C9 .

C9 CHECK CIRCUIT 64S-AD2 (BU/RD) FOR A SHORT TO VOLTAGE

- Disconnect: Central Junction Box (CJB) C270d.
- Measure the voltage between the interior auxiliary junction box C283b-11, circuit 64S-AD2 (BU/RD), harness side and ground.

Yes
REPAIR the circuit. TEST the system for normal operation.

No
GO to C10 .

 A0005092 • **Is any voltage indicated?**	
C10 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR A SHORT TO VOLTAGE	
• Measure the voltage between the CJB C270d-25, circuit 64S-LH2 (BU/RD), harness side and ground.  A0059734 • **Is any voltage indicated?**	**Yes** REPAIR the following circuit(s): 64S-LH2 (BU/RD), 64S-LH31 (BU/RD), or 64S-LH42 (BU/RD) for a short to voltage. TEST the system for normal operation. **No** GO to C11 .
C11 CHECK CIRCUIT 64S-LH33 (BU/BK) FOR A SHORT TO VOLTAGE	
• Measure the voltage between the CJB C270d-26, circuit 64S-LH33 (BU/BK), harness side and ground.  A0059735 • **Is any voltage indicated?**	**Yes** REPAIR the following circuit(s): 64S-LH33 (BU/BK), 64S-LH33A (BU/BK), or 64S-LH32 (BU/RD) for a short to voltage. TEST the system for normal operation. **No** REPAIR or INSTALL a new CJB. TEST the system for normal operation.
C12 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Instrument Cluster Illumination Is Inoperative

Normal Operation

The headlamp switch supplies the instrument cluster with the headlamp switch position status. The dimmer switch provides the instrument cluster with the dimmer control status through signal circuit 8-LE10 (WH/BK)

and return circuit 9-LE10 (BN/YE). The instrument cluster sends the illumination message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication network, circuits 4-EG8 (GY/VT) and 5-EG8 (BU/WH), based upon the dimmer switch position. The FEM is supplied with illumination voltage through circuit 29S-DK22 (OG/YE) whenever the switched system power (SSP) is energized. When the headlamp switch is in the PARK, HEADLAMP, or AUTOLAMP ON position, the instrument cluster sends the FEM an illumination message and the FEM, in turn, provides a pulse width modulation (PWM) voltage to the interior auxiliary junction box through circuit 64S-LH5 (BU/RD). The interior auxiliary junction box separates the PWM voltage and supplies it to joint connector 3 through circuit 64S-LK1 (BU/RD) and from joint connector 3 to the instrument cluster through circuit 64S-LK29 (BU/RD). The instrument cluster is grounded by circuit 31-A11 (BK).

Possible Causes

- instrument cluster
- circuit 31-A11 (BK) open
- circuit 64S-LK29 (BU/RD) open or short to ground

PINPOINT TEST D: THE INSTRUMENT CLUSTER ILLUMINATION IS INOPERATIVE

⚠ CAUTION: Use the correct probe adaptor(s) when making measurements. Failure to use the correct probe adaptor(s) may damage the connector.

Test Step	Result / Action to Take
D1 CHECK THE ILLUMINATION FEED CIRCUIT FOR VOLTAGE	
• Disconnect: Instrument Cluster C220a. • Key in ON position. • Turn the headlamps ON. • Place the dimmer switch in the maximum brightness position. • Measure the voltage between the instrument cluster C220a-7, circuit 64S-LK29 (BU/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to D2 . **No** REPAIR the circuit. TEST the system for normal operation.
D2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No

• Connect all the instrument cluster connectors and make sure they seat correctly. • **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTC's. REPEAT the self-test.

Pinpoint Test E: The Instrument Panel Illumination Does Not Dim

Normal Operation

The headlamp switch supplies the instrument cluster with the headlamp switch position status. The dimmer switch provides the instrument cluster with the dimmer control status through signal circuit 8-LE10 (WH/BK) and return circuit 9-LE10 (BN/YE). The instrument cluster sends the illumination message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication network, circuits 4-EG8 (GY/VT) and 5-EG8 (BU/WH), based upon the dimmer switch position. The FEM is supplied with illumination voltage through circuit 29S-DK22 (OG/YE) whenever the switched system power (SSP) is energized. When the headlamp switch is in the PARK, HEADLAMP, or AUTOLAMP ON position, the instrument cluster sends the FEM an illumination message and the FEM, in turn, provides pulse width modulation (PWM) voltage to the interior auxiliary junction box through circuit 64S-LH5 (BU/RD). The interior auxiliary junction box separates the PWM voltage and supplies it to sub-illumination sources through circuits 64S-LH4 (BU/RD), 64S-LH1 (BU/RD), 64S-LK9 (BU/RD), 64S-LH16 (BU/WH), 64S-LK1 (BU/RD), and the central junction box (CJB) through circuit 64S-AD2 (BU/RD). The CJB separates the PWM voltage and also supplies it to sub-illumination sources through circuits 64S-LH2 (BU/RD) and 64S-LH33 (BU/BK). The sub-illumination sources then provide the PWM voltage to the individual illuminating sources.

Possible Causes

- circuit 8-LE10 (WH/BK) open, short to voltage, or short to ground
- circuit 9-LE10 (BN/YE) open, short to voltage, or short to ground
- instrument panel dimmer switch
- dimmer module
- instrument cluster

PINPOINT TEST E: THE INSTRUMENT PANEL ILLUMINATION DOES NOT DIM

Test Step	Result / Action to Take
E1 RETRIEVE THE DTCS FROM THE INSTRUMENT CLUSTER	
• Check the recorded results from the instrument cluster self-test. • **Are any DTCs retrieved?**	**Yes** If DTC B1246, GO to E3 . **No** GO to E2 .
E2 CHECK THE INSTRUMENT PANEL DIMMER SWITCH MONITOR THE INSTRUMENT CLUSTER PID	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID • Turn the headlamps ON. • Select and monitor the instrument cluster PID DSWSTAT while rotating the instrument panel dimmer switch from the	**Yes** GO to E7 . **No** GO to E3 .

lowest position to the highest position. • **Does the PID value agree with the instrument panel dimmer switch position?**	
E3 CHECK CIRCUIT 8-LE10 (WH/BK) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Turn the headlamps OFF. • Disconnect: Instrument Panel Dimmer Switch C206. • Disconnect: Instrument Cluster C220c. • Measure the resistance between the instrument cluster C220c-16, circuit 8-LE10 (WH/BK), harness side and the instrument panel dimmer switch C206-6, circuit 8-LE10 (WH/BK), harness side and; and between the instrument cluster C220c-16, circuit 8-LE10 (WH/BK), harness side and ground.  A0059737 • **Is the resistance less than 5 ohms between the instrument cluster and the instrument panel dimmer switch, and greater than 10,000 ohms between the instrument cluster and ground?**	**Yes** GO to E4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E4 CHECK CIRCUIT 9-LE10 (BN/YE) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the instrument panel dimmer switch C206-4, circuit 9-LE10 (BN/YE), harness side and the instrument cluster C220c-4, circuit 9-LE10 (BN/YE), harness side; and between the instrument panel dimmer switch C206-4, circuit 9-LE10 (BN/YE), harness side and ground.  A0040362 • **Is the resistance less than 5 ohms between the instrument panel dimmer switch and instrument cluster, and greater than 10,000 ohms between the instrument panel dimmer switch and ground?**	**Yes** GO to E5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E5 CHECK CIRCUITS 8-LE10 (WH/BK) AND 9-LE10 (BN/YE) FOR A SHORT TO VOLTAGE	

• Key in ON position. • Measure the voltage between the instrument panel dimmer switch C206-6, circuit 8-LE10 (WH/BK), harness side and ground; and between the instrument panel dimmer switch C206-4, circuit 9-LE10 (BN/YE), harness side and ground.  A0059739 • **Is any voltage indicated?**	**Yes** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to E6 .
E6 CHECK THE INSTRUMENT PANEL DIMMER SWITCH	
• Key in OFF position. • Measure the resistance between the instrument panel dimmer switch C206-4, circuit 9-LE10 (BN/YE), component side and the instrument panel dimmer switch C206-6, circuit 8-LE10 (WH/BK), component side.  A0060971 • Rotate the instrument panel dimmer switch from the minimum brightness level to the maximum brightness level. • **Does the resistance begin at approximately 1000 ohms at the minimum brightness level and move to approximately 10 megaohms at the maximum brightness level?**	**Yes** GO to E8 . **No** INSTALL a new instrument panel dimmer switch. REFER to Instrument Panel Dimmer Switch in this section. CLEAR the DTCs. REPEAT the self-test.
E7 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

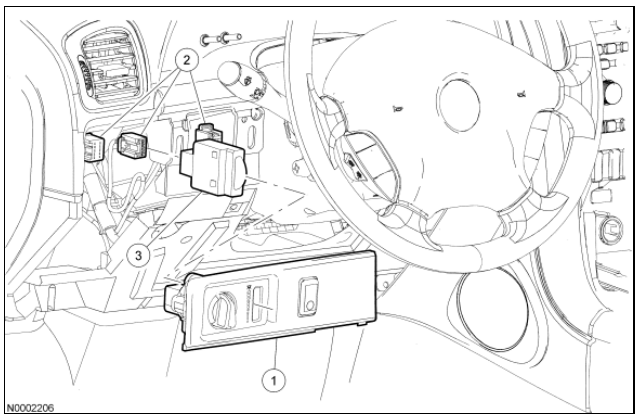
E8 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.

• Connect all the instrument cluster connectors and make sure they seat correctly. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTC's. REPEAT the self-test.

Instrument Panel Dimmer Switch

Printable View (140 KB)



Item	Part Number	Description
1	044B89	Outer instrument panel finish panel
2		Headlamp switch and instrument panel dimmer switch electrical connectors (Part of 14401)
3	13K196	Instrument panel dimmer switch

1. Remove the instrument panel steering column cover. For additional information, refer to Section 501-12 .

2. **NOTE:** The outer instrument panel finish panel is held in place by spring clips located on the housing.

   Remove the outer instrument panel finish panel.

   - Disconnect electrical connectors.

3. Release the retaining tabs and remove the instrument panel dimmer switch.

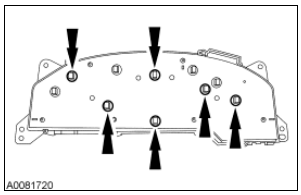
4. To install, reverse the removal procedure.

Instrument Cluster Bulb

Printable View (19 KB)

Removal and Installation

1. Remove the instrument cluster. For additional information, refer to Section 413-01 .
2. Remove the instrument cluster socket and bulb assembly, as necessary.



3. To install, reverse the removal procedure.

Instrument Cluster

Printable View (7 KB)

The base and optional instrument clusters both contain gauges, indicator lamps, and warning lamps that are designed to provide the driver with system status and to alert the driver that certain conditions exist in the vehicle. The optional instrument cluster contains the message center which is located in the lower RH corner of the cluster. Gauges provide information to the driver indicating the status of systems. The systems that use gauges include vehicle speed, fuel level, engine coolant temperature, and engine rpm. Indicator lamps provide information to the driver of conditions that exist in the vehicle. Examples of the indicator lamps include the turn signal, low washer fluid level, traction control, and speed control lamps. Warning indicator lamps provide information to the driver of conditions that could potentially alter vehicle performance. Examples of the warning indicators include the ABS, BRAKE, safety belt, and low oil pressure indicators.

Instrument Cluster Printable View (358 KB)

Refer to Wiring Diagrams Cell 60 , Instrument Cluster for schematic and connector information.

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapter, or equivalent diagnostic tool
ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The instrument cluster, the front electronic module (FEM), and the rear electronic module (REM) must be reconfigured upon replacement. Refer to Section 418-01 .

NOTE: The diagnostic tool may display ICM for the instrument cluster.

NOTE: For any concerns with the restraint control module (RCM), refer to Section 501-20B .

The instrument cluster is a hybrid electronic instrument cluster (HEC). The vehicle electronic functions are divided into zones. The instrument cluster, FEM, and REM use the standard corporate protocol (SCP) communication network to transmit and receive information. It is very important to understand:

- where the input (command) originates
- all information (messages) necessary in order for a feature to operate
- which module(s) receive(s) the input or command message
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module
- which module controls the output of the feature

The instrument cluster communicates with the FEM, the REM, the anti-lock brake system (ABS) module, the powertrain control module (PCM), the steering column lock, the message center, and the RCM over the SCP to control the gauges, indicators, and chimes.

Integrated Circuit Display

The integrated circuit display maintains 3 separate functions housed in a single display area, the warning center display, the trip A/B, and the odometer display.

Warning Center Display

The warning center display is a fluorescent vacuum tube display that alerts the driver of a lamp outage or an electric parking brake condition. The FEM and REM both control the exterior illumination. When an exterior

lamp(s) is inoperative, the FEM or the REM notifies the instrument cluster over the communication network, and the instrument cluster illuminates the warning center message LAMP OUT. The warning center message remains on until the condition is corrected. When the electric parking brake is applied, needs to be recalibrated, or has a system fault, the electric parking brake module notifies the instrument cluster over the communication network. Once the condition is corrected, the warning center displays the trip odometer.

Trip A/B And Odometer Displays

The vehicle speed signal (VSS) from all 4 wheels is hardwired directly to the ABS module. The speed status is then sent to the instrument cluster by the ABS module over the SCP communication network to establish a rolling count.

PRNDL Display

The digital transmission range (TR) sensor is hardwired directly to the PCM. The status of the gear selection is sent to the instrument cluster from the PCM over the communication network.

Gauges

Fuel Gauge

The fuel gauge system has a saddle-type fuel tank with 2 integrated fuel senders: the fuel delivery module and the jet pump module. The fuel delivery module is located on the right side of the fuel tank, and the jet pump module is located on the left side of the fuel tank. The fuel level status is sent directly to the REM, which is hardwired to the fuel senders. The REM sends the fuel data to the instrument cluster via the communication network. Normal operating range of the fuel delivery module is from 16 ± 2 ohms at empty (E) to 155 ± 4 ohms at full (F). The normal operating range of the jet pump module sender is from 19 ± 2 ohms at empty (E) to 160 ± 2 ohms at full (F). If either the REM or the jet pump module fuel sender has an open or shorted signal, the instrument cluster logs diagnostic trouble code (DTC) B1201. If the jet pump module sender is open, the fuel gauge defaults to the fuel delivery module sender value only and the fuel gauge indicates E to 1/2 tank (depending on the fuel level on the fuel delivery module side of the tank). If the fuel delivery module is open, the fuel gauge defaults to the empty position.

Speedometer Gauge

The instrument cluster uses a vehicle speed signal from the ABS module to control the movement of the speedometer pointer. Vehicle speed information is sent to the ABS module from all 4 wheel speed sensors, which is then sent to the instrument cluster by the ABS module over the communication network.

Tachometer Gauge

The instrument cluster uses crankshaft speed information, sent to the PCM from the crankshaft position sensor, to control the movement of the tachometer pointer. The crankshaft position sensor is hardwired directly to the PCM, which provides the crankshaft position sensor status to the instrument cluster over the communication network.

Temperature Gauge

The cylinder head temperature sensor is hardwired directly to the PCM. The status of the cylinder head temperature is sent from the PCM over the communication network to the instrument cluster. The normal operating temperature is 60° C (140° F) to 120° C (248° F). Redline starts at 121° C (249.8° F).

Warning Indicator Lamps

Air Bag Warning Indication

The supplemental restraint system is monitored and controlled by the RCM. The status of the supplemental restraint system is sent from the RCM to the instrument cluster through hardwired circuitry. The AIR BAG warning indicator is illuminated if the RCM sends a ground signal to the instrument cluster.

ABS Warning Indication

The ABS is monitored by the ABS module, which sends the status signal to the instrument cluster over the communication network. The instrument cluster uses this input to determine whether or not there is a fault with the traction control or the ABS systems, and illuminates the ABS warning indicator according to the input.

Brake Warning Indication

The brake warning indicator supports 3 separate functions: base brake system failure, low brake fluid level, and engagement of the parking brake. These functions are controlled by the parking brake control switch, the brake fluid level switch, and the brake system itself. The brake fluid level switch is hardwired directly to the FEM. The status of the brake fluid level switch is sent from the FEM to the instrument cluster over the communication network. The parking brake control switch is hardwired directly to the parking brake module. The status of the parking brake switch is sent from the parking brake module to the instrument cluster over the communication network. The base brake system status is monitored by the ABS module and sent to the instrument cluster over the communication network.

Charging System Warning Indicator

The charging system controls are accomplished through the PCM, which monitors the output of the generator through hardwired circuitry. The status of the charging system is then relayed from the PCM to the instrument cluster over the communication network.

Door Ajar Warning Indication (Base Cluster Only)

The rear door switches and the decklid ajar switch are directly hardwired to the REM. The door switches for the front of the vehicle are directly hardwired to the FEM. The FEM and REM both use the multiple inputs from the door switches and the decklid ajar switch to determine whether the doors and the decklid ajar switch are in the opened or closed position. The door ajar status is sent to the instrument cluster from both the FEM and REM over the communication network.

Engine Over-Temperature Warning Indicator

The engine over-temperature status is determined by the cylinder head temperature sensor, which is hardwired directly to the PCM. The status of the cylinder head temperature is sent from the PCM over the communication network to the instrument cluster. The instrument cluster then determines whether or not the cylinder head temperature is above the over-temperature threshold.

Low Fuel Warning Indicator (Base Cluster Only)

There are 2 fuel tank senders, which are hardwired directly to the REM. The status of the fuel level from both senders is sent from the REM over the communication network to the instrument cluster. The instrument cluster uses these inputs to determine the overall fuel level in the tank and illuminates the low fuel warning indicator if the fuel level is low.

Low Washer Fluid Warning Indication (Base Cluster Only)

The low washer fluid level switch is hardwired directly to the FEM. The FEM monitors the washer fluid level status and sends it to the instrument cluster via the communication network.

Safety Belt Warning Indicator

The instrument cluster receives the safety belt warning status from the RCM through hardwired circuitry. The safety belt switch is hardwired to the RCM. When the safety belt is fastened, the safety belt switch opens and removes the ground to the RCM. When the safety belt is unfastened, the safety belt switch closes and grounds the circuit to the RCM.

Indicator Lamps

Advance Traction Indication

The status of the advance traction control system is communicated to the instrument cluster from the ABS module over the communication network. When a traction control event occurs the ABS module sends a command to the instrument cluster to illuminate the advance traction indicator.

CHECK FUEL CAP (Base Cluster Only)

The CHECK FUEL CAP indicator is used to indicate significant leaks in the fuel tank evaporative system due to a loose fuel cap. The fuel tank pressure is monitored by the PCM, and if a leak is detected it signals a fault to the instrument cluster over the communication network. Once the PCM has detected a loose fuel cap and the CHECK FUEL CAP indicator is illuminated, the indicator remains illuminated until the fuel cap is secured and the ignition switch has been cycled one time.

Electronic Throttle Control (Base Cluster Only)

The instrument cluster receives the electronic throttle control status from the PCM over the communication network. When a system concern is detected, the PCM sends the instrument cluster a command signal to turn the electronic throttle control indicator ON.

High Beam Indication

The multifunction switch is hardwired directly to the instrument cluster. The headlamp status is then sent from the instrument cluster to the FEM via the communication network.

Low Oil Pressure Indication

The low oil pressure switch is hardwired to the FEM. The status of the oil pressure is sent from the FEM to the instrument cluster via the communication network.

Malfunction Indicator Lamp (MIL)

After the engine is started, the MIL proves out for a duration of 3 seconds. If the instrument cluster does not receive a message from the PCM within 5 seconds, it sends 2 messages to the PCM and attempts to reestablish communication. If the instrument cluster is unable to reestablish communication, the instrument cluster illuminates the MIL and logs a diagnostic trouble code (DTC).

Speed Control Indication

The speed control status is monitored by the PCM and then relayed to the instrument cluster via the communication network. The speed control indicator illuminates when the speed control is set.

Steering Column Lock Indication

The instrument cluster monitors the key-in-ignition status, the ignition switch position status, and the steering column lock status. When the key is in the ignition switch, the ignition switch is in the RUN position and the steering column is locked, the instrument cluster turns on the steering column lock warning indicator. The

steering column lock status is sent to the instrument cluster from the steering column lock module over the communication network.

Traction Control Indication

The status of the traction control is communicated to the instrument cluster from the ABS module via the communication network. When the traction control system is active, the ABS module sends a command to the instrument cluster to illuminate the traction control indicator.

Turn/Hazard Indication

The multifunction switch is hardwired directly to the instrument cluster. The instrument cluster sends the signal from the multifunction switch to both the FEM and the REM via the communication network while simultaneously illuminating the turn/hazard indicators. The FEM and the REM use these inputs from the instrument cluster to illuminate the exterior lighting as necessary.

Parameter Reset and Key Programming

NOTE: The instrument cluster parameters must be reset upon installation of a new instrument cluster.

NOTE: Both passive anti-theft system (PATS) keys are needed to carry out this procedure.

To reset the instrument cluster parameters and program the keys, complete the following procedure:

1. Connect the diagnostic tool.
2. Select the instrument cluster.
3. Select ENTER SECURITY ACCESS. Wait 10 minutes for security access to be granted.
4. Select PARAMETER RESET.
5. Disconnect the diagnostic tool.
6. Place the first PATS key in ignition switch.
7. Turn the ignition switch to the ON position.
8. Turn the ignition switch to the OFF position.
9. Remove the key from the ignition switch.
10. Place the second PATS key in the ignition switch.
11. Turn the ignition switch to the ON position.
12. Turn the ignition switch to the OFF position (the programming sequence is complete).

NOTE: If the vehicle fails to start following completion of the parameter reset and key programming sequence, clear the keep alive memory (KAM) by disconnecting the battery for 5 minutes. For additional information about the battery disconnect procedure, refer to Section 414-01 .

Inspection and Verification

NOTE: For any concerns with the restraint control module (RCM), refer to Section 501-20B .

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Washer fluid level • Fuel tank • Engine coolant level • Accessory drive belt • Engine oil level • Brake fluid level	• Central junction box (CJB) fuse(s): ♦ 4 (5A) ♦ 13 (5A) ♦ 17 (5A) ♦ 19 (15A) ♦ 20 (10A) • Battery junction box (BJB) fuse 22 (20A) • Circuitry • Powertrain control module (PCM) • Parking brake module • Restraint control module (RCM) • Front electronic module (FEM) • Rear electronic module (REM) • Instrument cluster

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the instrument cluster, Go To Pinpoint Test A .
   - No response/not equipped for the parking brake module, refer to Section 206-05 .
   - No response/not equipped for the FEM, refer to Section 419-10 .
   - No response/not equipped for the REM, refer to Section 419-10 .
   - No response/not equipped for the RCM, refer to Section 501-20B .
   - No response/not equipped for the PCM, refer to Section 418-00 .

- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index, Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index, Restraint Control Module (RCM) Diagnostic Trouble Code (DTC) Index, or the Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index. For the electronic brake control module DTCs, refer to Section 206-05 . For all other DTCs, refer to Section 419-10 .

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1202	Fuel Sender Circuit Open	Instrument Cluster	Go To Pinpoint Test B .
B1204	Fuel Sender Circuit Short to Ground	Instrument Cluster	Go To Pinpoint Test B .
B1205	EIC Switch-1 Assembly Circuit Failure	Instrument Cluster	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
B1209	EIC Switch-2 Assembly Circuit Failure	Instrument Cluster	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
B1317	Battery Voltage High	Instrument Cluster	REFER to Section 414-00 .
B1318	Battery Voltage Low	Instrument Cluster	REFER to Section 414-00 .
B1342	ECU Is Defective	Instrument Cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Instrument Cluster in this section.
B1567	Lamp Headlamp High-Beam Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B2143	NVM Memory Failure	Instrument Cluster	Go To Pinpoint Test Z .
B2627	Fuel Sender Circuit Open #2	Instrument Cluster	Go To Pinpoint Test B .
B2628	Fuel Sender Circuit Short to Ground #2	Instrument Cluster	Go To Pinpoint Test B .
B2879	Fuel Tank Jet Pump Fault	Instrument Cluster	Go To Pinpoint Test B .
U1041	SCP (J1850) Invalid or Missing Data for Vehicle Speed	ABS/TC/IVD	CARRY OUT the ABS/TC/IVD self-test.
U1073	SCP (J1850) Invalid or Missing Data for Engine	PCM	CARRY OUT the PCM self-test.

	Coolant Fluid Temperature		
U1123	SCP (J1850) Invalid or Missing Data for Odometer Rolling Count	ABS/TC/IVD	CARRY OUT the ABS/TC/IVD self-test.
U1262	SCP (J1850) Communication Bus Fault	Instrument Cluster	REFER to Section 418-00 .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1479	Wiper Washer Fluid Level Sensor Circuit Failure	FEM	Go To Pinpoint Test N .
C1284	Engine Oil Pressure Switch Failure	FEM	Go To Pinpoint Test J .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1201	Fuel Sender Circuit Failure	REM	Go To Pinpoint Test B .

For a complete list of instrument cluster, FEM, and REM DTCs, refer to Section 419-10 .

Restraint Control Module (RCM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1869	Lamp Air Bag Warning Indicator Circuit Open	RCM	Go To Pinpoint Test W .
B1870	Lamp Air Bag Warning Indicator Circuit Short to Battery	RCM	Go To Pinpoint Test W .

For a complete list of RCM DTCs, refer to Section 501-20B .

Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index

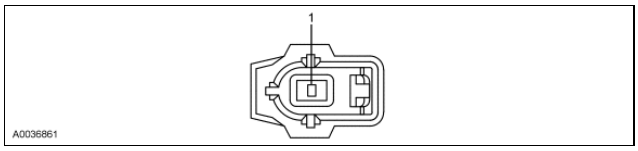
DTC	Description	Source	Action
P0457	Fuel Fill Cap Off	PCM	REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

For a complete list of PCM DTCs, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Symptom Chart

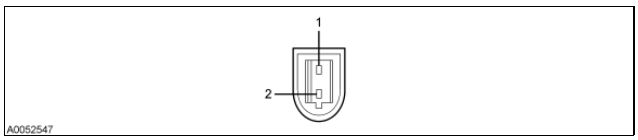
Symptom Chart
Connector Circuit Reference

Engine Oil Pressure Switch C103



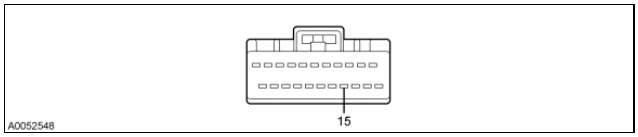
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GC21 (WH/GN) oil pressure signal circuit	0 volts, less than 5 ohms between the FEM and the engine oil pressure switch. Greater than 10,000 ohms between the instrument cluster and ground.

Low Washer Fluid Switch C138



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-GC8 (BK/OG) low washer fluid switch ground	0 volts, less than 5 ohms between the low washer fluid switch and ground.
2	8-GC8 (WH/BU) low washer fluid signal circuit	0 volts, less than 5 ohms between the low washer fluid switch and the front electronic module (FEM). Greater than 10,000 ohms between the low washer fluid switch and ground.

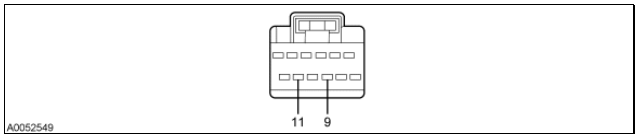
Front Electronic Module (FEM) C201b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15		

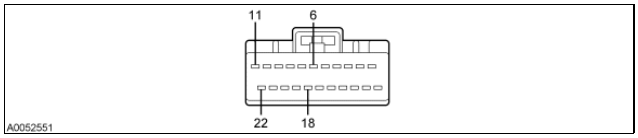
	8-GC8 (WH/BU) low washer fluid signal circuit	0 volts, less than 5 ohms between the FEM and the low washer fluid switch. Greater than 10,000 ohms between the FEM and ground.

Front Electronic Module (FEM) C201c



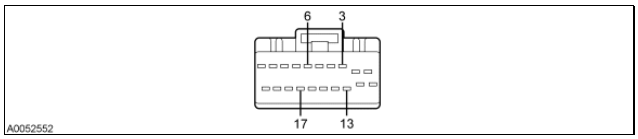
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
9	8-GC21 (WH/GN) oil pressure signal circuit	0 volts, less than 5 ohms between the FEM and the engine oil pressure switch. Greater than 10,000 ohms between the FEM and ground.
11	8-GC7 (WH/RD) brake fluid level signal circuit	0 volts, less than 5 ohms between the FEM and the brake fluid level sensor.

Instrument Cluster C220a



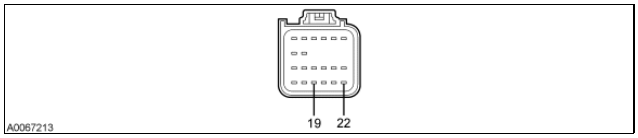
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	31-AL11 (BK) cluster ground	0 volts, less than 5 ohms between the instrument cluster and ground.
11	15-JA14 (GN/BK) B+ power feed, hot in the START/RUN	Greater than 10 volts with the ignition switch in the START/RUN position. Less than 5 ohms between the instrument cluster and the central junction box (CJB). Greater than 10,000 ohms between the instrument cluster and ground.
18	8-GE52 (WH/BK) safety belt warning indicator control circuit	0 volts, less than 5 ohms between the instrument cluster and the RCM. Greater than 10,000 ohms between the instrument cluster and ground.
22	31S-JA14 (BK/GN) air bag warning indicator control circuit	0 volts, less than 5 ohms between the instrument cluster and the RCM. Greater than 10,000 ohms between the instrument cluster and ground.

Instrument Cluster C220b



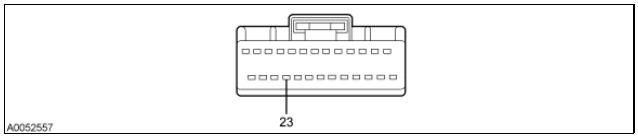
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	29-GG11 (OG/BU) B+ keep alive memory power	Greater than 10 volts at all times. Less than 5 ohms between the instrument cluster and the central junction box (CJB). Greater than 10,000 ohms between the instrument cluster and ground.
6	15-GG14 (GN/RD) B+ power feed, hot in the START/RUN	Greater than 10 volts with the ignition switch in the START/RUN position. Less than 5 ohms between the instrument cluster and the CJB. Greater than 10,000 ohms between the instrument cluster and ground.
13	91-GG11 (BN/RD) instrument cluster logic ground.	0 volts, less than 5 ohms between the instrument cluster and ground.
17	75-GG15 (YE/GN) B+ power feed, hot in the RUN/ACC	Greater than 10 volts with the ignition switch in the RUN/ACC position. Less than 5 ohms between the instrument cluster and the CJB. Greater than 10,000 ohms between the instrument cluster and ground.

Restraint Control Module (RCM) C310a



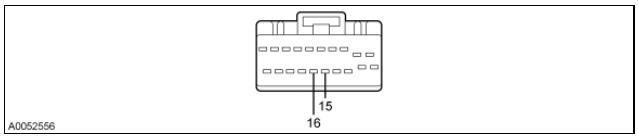
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
19	31S-JA14 (BK/GN) air bag warning indicator control circuit	0 volts, less than 5 ohms between the RCM and the instrument cluster. Greater than 10,000 ohms between the RCM cluster and ground.
22	8-GE52 (WH/BK) safety belt warning indicator control circuit	0 volts, less than 5 ohms between the RCM and the instrument cluster. Greater than 10,000 ohms between the RCM cluster and ground.

Rear Electronic Module (REM) C420c



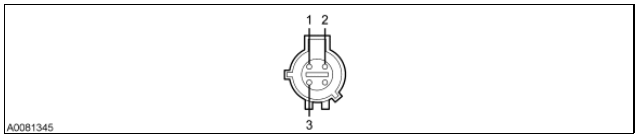
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
23	9-GA1 (BN/RD) fuel level signal return	0 volts, less than 5 ohms between the REM and the fuel delivery module and jet pump module. Greater than 10,000 ohms between the REM and ground.

Rear Electronic Module (REM) C420d



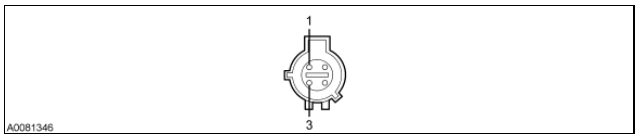
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15	8-GA7 (WH/RD) fuel level variable input signal from the fuel delivery module	0 volts, less than 5 ohms between the REM and the fuel delivery module.
16	8-GA25 (WH/BU) fuel level variable input signal from the jet pump module	0 volts, less than 5 ohms between the REM and the jet pump module.

Fuel Delivery Module C433



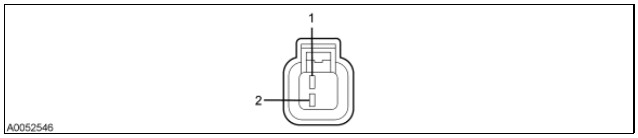
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GA7 (WH/RD) fuel level variable input signal from the fuel delivery module	0 volts, less than 5 ohms between the fuel delivery module and the rear electronic module (REM). Greater than 10,000 ohms between the fuel delivery module and ground.
2	15S-RG2A (GN/OG) fuel pump power circuit	0 volts, less than 5 ohms between the fuel delivery module and the REM. Greater than 10,000 ohms between the fuel delivery module and ground.
3	9-GA7 (BN/RD) fuel level signal return	0 volts, less than 5 ohms between the fuel delivery module and the REM.

Jet Pump Module C434



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GA25 (WH/BU) fuel level variable input signal from the jet pump module	0 volts, less than 5 ohms between the jet pump module and the REM. Greater than 10,000 ohms between the jet pump module and ground.
3	9-GA25 (BN/BU) fuel level signal return	0 volts, less than 5 ohms between the jet pump module and the REM.

Brake Fluid Level Sensor C1395



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GC7 (WH/RD) brake fluid level signal circuit	0 volts, less than 5 ohms between the brake fluid level sensor and the front electronic module (FEM). Greater than 10,000 ohms between the brake fluid level switch and ground.
2	31-GC7 (BK/BU) brake fluid level ground	0 volts, less than 5 ohms between the brake fluid level switch and ground.

Pinpoint Test A: No Communication With The Instrument Cluster Module

Normal Operation

The instrument cluster communicates interactively with other electronic modules using the communication network. For additional information on module communication, refer to Section 418-00 . With the ignition switch in the START/RUN position, the instrument cluster receives power from the central junction box (CJB) fuse(s) 4 (5A), circuit 15-GG14 (GN/RD) and 17 (5A), circuit 15-JA14 (GN/BK), when the ignition switch is in the RUN/ACC position, power is received from the CJB fuse 13 (5A), circuit 75-GG15 (YE/GN). With the ignition switch in the OFF position, the instrument cluster receives its power from CJB fuse(s) 20 (10A), circuit 29-GG11 (OG/BU), and 19 (15A), circuit 29-AL12 (OG). The instrument cluster grounding is accomplished through circuit 91-GG11 (BN/RD), and circuit 31-AL11 (BK).

Possible Causes

- circuit 15-GG14 (GN/RD) open

- circuit 15-JA14 (GN/BK) open
- circuit 29-GG11 (OG/BU) open
- circuit 31-AL11 (BK) open
- circuit 75-GG15 (YE/GN) open
- circuit 91-GG11 (BN/RD) open
- instrument cluster

PINPOINT TEST A: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER MODULE

Test Step	Result / Action to Take
A1 CHECK THE HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
• Key in OFF position. • Disconnect: Instrument Cluster C220b. • Measure the voltage between the instrument cluster C220b-3, circuit 29-GG11 (OG/BU), harness side and ground.  A0002792 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** REPAIR the circuit. TEST the system for normal operation.
A2 CHECK THE HOT IN RUN POWER SUPPLY CIRCUITS	
• Disconnect: Instrument Cluster C220a. • Key in ON position. • Measure the voltage between the instrument cluster, harness side and ground as follows: **Instrument Cluster Connector-Pin** / **Circuit** C220a-11 / 15-JA14 (GN/BK) C220b-6 / 15-GG14 (GN/RD) C220b-17 / 75-GG15 (YE/GN)  A0002793 • **Are the voltages greater than 10 volts?**	**Yes** GO to A3 . **No** REPAIR the circuit in question. TEST the system for normal operation.
A3 CHECK CIRCUITS 91-GG11 (BN/RD) AND 31-AL11 (BK) FOR AN OPEN	

• Key in OFF position. • Measure the resistance between the instrument cluster C220b-13, circuit 91-GG11 (BN/RD), harness side and ground; and between the instrument cluster C220a-6, circuit 31-AL11 (BK), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** REFER to Section 418-00 to continue module communication diagnosis. **No** REPAIR the circuit in question. TEST the system for normal operation.

Pinpoint Test B: Incorrect Fuel Gauge Indication

Normal Operation

The fuel level status is monitored by the rear electronic module (REM) from the fuel delivery module through circuit 8-GA7 (WH/RD) and the jet pump module through circuit 8-GA25 (WH/BU). The REM sends the fuel level data to the instrument cluster over the communication network. The REM provides a signal return (ground) through circuit 9-GA1 (BN/RD), which is spliced to the fuel delivery module return circuit 9-GA7 (BN/RD), and the jet pump module return circuit 9-GA25 (BN/BU). The normal operating range of the fuel delivery module sender is from 16 ± 2 ohms at empty (E) to 155 ± 4 ohms at full (F). The normal operating range of the jet pump module is from 19 ± 2 ohms at empty (E) to 160 ± 2 ohms at full (F). Instrument cluster DTC B1202 is set if circuit 8-GA7 (WH/GN) is open or shorted to voltage. Instrument cluster DTC B1204 is set if circuit 8-GA7 (WH/GN) is shorted to ground. Instrument cluster DTC B2627 is set if circuit 8-GA25 (WH/BU) is open. Instrument cluster DTC B2628 is set if circuit 8-GA25 (WH/BU) is shorted to ground. REM DTC B1201 is be logged if either the fuel delivery or jet pump module are out of range or if the data reading is invalid. If the jet pump module is open, the fuel gauge defaults to the fuel delivery module value only and the fuel gauge indicates E to 1/2 tank (depending on the fuel level on the fuel pump delivery module side of the tank). If the fuel delivery module is open, the fuel gauge defaults to the empty position. Instrument cluster DTC B2879 is set if the fuel level measured by the jet pump module is greater than the fuel level measured by the fuel delivery module.

Possible Causes

- circuit 8-GA7 (WH/RD) open, short to ground, or short to voltage
- circuit 8-GA25 (WH/BU) open, short to ground, or short to voltage
- circuit 9-GA1 (BN/RD) open, short to ground, or short to voltage
- circuit 9-GA7 (BN/RD) open, short to ground, or short to voltage
- circuit 9-GA25 (BN/BU) open, short to ground, or short to voltage
- fuel delivery module
- jet pump module
- fuel tank
- REM
- instrument cluster

PINPOINT TEST B: INCORRECT FUEL GAUGE INDICATION

Test Step	Result / Action to Take
B1 RETRIEVE THE RECORDED REAR ELECTRONIC MODULE (REM) AND INSTRUMENT CLUSTER DTCS FROM	

BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
NOTE: The fuel gauge does not change indication unless there has been at least 11 liters (3 gallons) of fuel added or removed between one ignition switch cycle (ON, OFF, and ON). • Check for recorded instrument cluster and rear electronic module (REM) DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** If instrument cluster DTC B1202, B1204, B2627, B2628, or if REM DTC B1201 is retrieved, GO to B6 . If instrument cluster DTC B2879 is retrieved, GO to B3 . For all other instrument cluster and REM DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index or the REM Diagnostic Trouble Code (DTC) Index. **No** GO to B2 .
B2 CARRY OUT THE INSTRUMENT CLUSTER FUEL GAUGE ACTIVE COMMAND	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster fuel gauge control active command. • Trigger the fuel level active command. Toggle and monitor the fuel gauge while adjusting the fuel level active command to read 50% and 100%. • **Did the fuel gauge needle start at empty (E), move to half at 50%, and full (F) at 100%?**	**Yes** GO to B3 . **No** GO to B12 .
B3 CHECK THE FUEL DELIVERY MODULE RESISTANCE READING	
NOTE: The fuel delivery module sender resistance varies from 16 ± 2 ohms when empty (E) to 155 ± 4 ohms when full (F). • Key in OFF position. • Disconnect: Fuel Delivery Module C433. • Measure the resistance between the fuel delivery module C433 pin 1 component side and the fuel delivery module C433 pin 3, component side.  • **Is the resistance within specifications?**	**Yes** GO to B4 . **No** GO to B5 .
B4 CHECK THE JET PUMP MODULE RESISTANCE READING	

NOTE: The jet pump module sender resistance varies from 19 ± 2 ohms when empty (E) to 160 ± 4 ohms when full (F). • Key in OFF position. • Disconnect: Jet Pump Module C434. • Measure the resistance between the jet pump module C434 pin 1, component side and the jet pump module C434 pin 3, component side.  • **Is the resistance within specifications?**	**Yes** GO to B5 . **No** GO to B6 .
B5 INSPECT THE FUEL TANK	
• Visually inspect the fuel tank for any damage or deformation. • **Is the fuel tank OK?**	**Yes** INSTALL a new fuel delivery module or jet pump module as necessary. REFER to Section 310-01 . CLEAR the DTCs. REPEAT the self test. **No** INSTALL a new fuel tank. REFER to Section 310-01 . CLEAR the DTCs. REPEAT the self test.
B6 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 8-GA25 (WH/BU) AND CIRCUIT 9-GA1 (BN/RD) FOR A SHORT TO GROUND WITH THE REAR ELECTRONIC MODULE (REM) DISCONNECTED	
• Key in OFF position. • Disconnect: REM C420c. • Disconnect: REM C420d. • Measure the resistance between the REM connector, harness side and ground as follows: **REM Connector-Pin** / **Circuit** C420d-15 / 8-GA7 (WH/RD) C420d-16 / 8-GA25 (WH/BU) C420c-23 / 9-GA1 (BN/RD) • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B8 . **No** GO to B7 .
B7 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 8-GA25 (WH/BU) AND CIRCUIT 9-GA1 (BN/RD) FOR A SHORT TO GROUND WITH THE FUEL PUMP MOTOR AND THE FUEL	

SENDER DISCONNECTED

- Disconnect: Fuel Delivery Module C433.
- Disconnect: Jet Pump Module C434.
- Measure the resistance between the REM connector, harness side and ground as follows:

REM Connector-Pin	Circuit
C420d-15	8-GA7 (WH/RD)
C420d-16	8-GA25 (WH/BU)
C420c-23	9-GA1 (BN/RD)

- **Are the resistances greater than 10,000 ohms?**

Yes
INSTALL a new fuel delivery module or jet pump module as necessary. REFER to Section 310-01 . Clear the DTCs. REPEAT the self-test.

No
REPAIR the circuit in question. Clear the DTCs. REPEAT the self-test.

B8 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 8-GA25 (WH/BU), AND CIRCUIT 9-GA1 (BN/RD) FOR A SHORT TO VOLTAGE

- Key in ON position.
- Measure the voltage between the REM connector, harness side and ground as follows:

REM Connector-Pin	Circuit
C420d-15	8-GA7 (WH/RD)
C420d-16	8-GA25 (WH/BU)
C420c-23	9-GA1 (BN/RD)

- **Is any voltage present?**

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
GO to B9 .

B9 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 9-GA1 (BN/RD), AND CIRCUIT 9-GA7 (BN/RD) FOR AN OPEN

- Key in OFF position.
- Disconnect: Fuel Delivery Module C433.
- Disconnect: Jet Pump Module C434.
- Measure the resistance between the REM connector, harness side and the fuel delivery module connector, harness side; and between the REM connector, harness side and the jet pump module connector, harness side as follows:

REM Connector-Pin	Fuel Delivery Module Connector-Pin	Jet Pump Module Connector-Pin
C420d-15 8-GA7 (WH/RD)	C433-1 8-GA7 (WH/RD)	

Yes
GO to B10 .

No
REPAIR the circuit in question. TEST the system for normal operation.

C420d-16 8-GA25 (WH/BU)		C434-1 8-GA25 (WH/BU)
C420c-23 9-GA1 (BN/RD)	C433-3 9-GA7 (BN/RD)	
C420c-23 9-GA1 (BN/RD)		C434-3 9-GA25 (BN/BU)

- **Are the resistances less than 5 ohms?**

B10 CHECK THE FUEL PUMP MODULE FOR A SHORT	
• Measure the resistance between the fuel delivery module C433 pin 2, component side and the fuel delivery module C433 pin 1, component side; and between the fuel delivery module C433 pin 2, component side and the fuel delivery module C433 pin 3, component side.  A0060986 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B11 . **No** INSTALL a new fuel delivery module. REFER to Section 310-01 . CLEAR the DTCs. REPEAT the self-test.
B11 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. If incorrect fuel gauge indication is still present, INSTALL the original REM. GO to B12 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

B12 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating

	correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: Incorrect Temperature Gauge Indication

Normal Operation

The normal engine operating temperature is 60°C (140°F) to 120°C (248°F). Redline starts at 121°C (249.8°F). The cylinder head temperature (CHT) sensor monitors the coolant temperature at the cylinder head and is hardwired directly to the powertrain control module (PCM). The status of the engine coolant temperature is sent from the PCM to the instrument cluster over the communication network. The instrument cluster DTC U1073 is logged if the instrument cluster fails to receive the engine temperature status from the PCM.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST C: INCORRECT TEMPERATURE GAUGE INDICATION

Test Step	Result / Action to Take
C1 RETRIEVE THE RECORDED INSTRUMENT CLUSTER AND POWERTRAIN CONTROL MODULE (PCM) DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded instrument cluster and PCM DTCs from the continuous and on-demand self-tests. • **Are any instrument cluster or PCM DTCs recorded?**	**Yes** If any PCM DTCs are retrieved, or instrument cluster DTC U1073 is retrieved, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnosis. All other DTCs, refer to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. **No** GO to C2 .
C2 CARRY OUT THE INSTRUMENT CLUSTER ENGINE COOLANT TEMPERATURE GAUGE ACTIVE COMMAND	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster engine coolant control active command.	**Yes** GO to C3 . **No** GO to C4 .

• Trigger the engine coolant active command. Toggle and monitor the engine coolant temperature gauge while adjusting the engine coolant active command to read 50% and 100%. • **Did the temperature gauge needle start at cold, move to half at 50%, and full hot at 100%?**	
C3 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all PCM the connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

C4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The Low Fuel Warning Indicator Is Never/Always On

Normal Operation

Typically, the low fuel indicator turns on when the fuel level reaches a predetermined level of approximately 1/8 tank. The low fuel level warning indicator and fuel gauge are controlled by the instrument cluster based upon the fuel level data provided by the rear electronic module (REM). When the instrument cluster receives data from the REM that indicates the fuel level has reached the preset low fuel level, the fuel gauge indicates low fuel and the instrument cluster turns on the low fuel warning indicator. A correctly functioning fuel gauge indicates that the fuel pump modules, the circuitry to the REM, and the REM are operating correctly.

Possible Causes

- REM
- instrument cluster

PINPOINT TEST D: THE LOW FUEL WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
D1 CHECK THE FUEL GAUGE OPERATION	
• Check the operation of the fuel gauge. • **Does the fuel gauge operate correctly?**	**Yes** GO to D2 . **No** Go To Pinpoint Test B .
D2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Speedometer Is Inoperative

Normal Operation

Vehicle speed information is received by the anti-lock brake system (ABS) module from each of the 4 wheel speed sensors. The vehicle speed information is then sent to the instrument cluster by the ABS module over the communication network. Instrument cluster DTC U1041 is logged if the instrument cluster fails to receive the vehicle speed data from the ABS module.

Possible Causes

- ABS
- instrument cluster

PINPOINT TEST E: THE SPEEDOMETER IS INOPERATIVE

Test Step	Result / Action to Take
E1 CARRY OUT THE INSTRUMENT CLUSTER SPEEDOMETER ACTIVE COMMAND	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster speedometer command active command.	**Yes** GO to E2 . **No** GO to E4 .

• Trigger the speedometer and scroll in increments of 10%. Monitor the speedometer gauge. The speedometer should be increasing in increments of 26 km/h (16 mph) for every 10%. • **Does the speedometer increase within specification?**	
E2 CARRY OUT THE INSTRUMENT CLUSTER DIGITAL SEGMENT DISPLAY ACTIVE COMMAND	
• Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster display segment control II active command. Trigger the segments active command. • **Do all the segments illuminate?**	**Yes** GO to E3 . **No** GO to E4 .
E3 RETRIEVE THE RECORDED INSTRUMENT CLUSTER DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded instrument cluster DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** If instrument cluster DTC U1041 is recorded, REFER to Section 206-09 to continue diagnosis. All other instrument cluster DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. **No** GO to E4 .
E4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Odometer Is Inoperative

Normal Operation

Vehicle odometer information is sent to the instrument cluster from the anti-lock brake system (ABS) module over the communication network. DTC U1123 is logged if the instrument cluster fails to receive the odometer rolling count status from the ABS module. The instrument cluster DTC B2143 is logged if the instrument cluster detects a nonvolatile memory (NVM) failure.

Possible Causes

- ABS module
- instrument cluster

PINPOINT TEST F: THE ODOMETER IS INOPERATIVE

Test Step	Result / Action to Take
F1 CHECK THE SPEEDOMETER OPERATION	
• Operate the vehicle to verify that the speedometer operates correctly. • **Does the speedometer operate correctly?**	**Yes** GO to F2 . **No** Go To Pinpoint Test E .
F2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Tachometer Is Inoperative

Normal Operation

The engine speed is monitored by the powertrain control module (PCM) through the crankshaft position (CKP) sensor. The CKP is hardwired directly to the PCM. The status of the CKP is sent from the PCM to the instrument cluster over the communication network.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST G: THE TACHOMETER IS INOPERATIVE

Test Step	Result / Action to Take
G1 RETRIEVE THE RECORDED POWERTRAIN CONTROL MODULE (PCM) DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded PCM DTCs from the continuous and on-demand self-test.	**Yes** REPAIR the DTC. REFER to the Powertrain Control/Emissions

• **Are any DTCs recorded?**	Diagnosis (PC/ED) manual to diagnose the DTC. **No** GO to G2 .
G2 CARRY OUT THE INSTRUMENT CLUSTER TACHOMETER ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster tachometer control active command. Trigger the tachometer active command. Adjust the scroll knob until the tachometer reads 50%. Observe the tachometer gauge reading. • Adjust the scroll knob until the tachometer reads 100%. Observe the tachometer gauge reading. • **Does the tachometer gauge needle start at 0 rpm, move to approximately 3,500 rpm at 50%, and 7,000 rpm at 100%?**	**Yes** GO to G4 . **No** GO to G3 .
G3 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

G4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: The Door Ajar Indicator Is Inoperative (Chime Is Operative)/Does Not Operate Correctly

Normal Operation

The normally open front door ajar switches are directly hardwired to the front electronic module (FEM) and the normally open rear door ajar switches are hardwired to the rear electronic module (REM). When a door is open, the door ajar switch provides a ground signal to the FEM or REM. When the door is closed, the door

ajar switch opens, removing the ground signal to the FEM or REM. The FEM and REM uses the multiple inputs from the door ajar switches to determine whether the doors are in the opened or closed position and provide a signal to the instrument cluster over the communication network. A door ajar chime that is operating correctly indicates that the FEM or the REM is monitoring the correct operation of the door ajar switches.

Possible Causes

- FEM
- REM
- instrument cluster

PINPOINT TEST H: THE DOOR AJAR INDICATOR IS INOPERATIVE (CHIME IS OPERATIVE)/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
H1 CHECK THE INTERIOR DOME LAMP OPERATION	
• Key in ON position. • Open and close each door and monitor the interior dome lamp. • **Does the interior dome lamp operate correctly?**	**Yes** GO to H2 . **No** REFER to Section 417-02 to continue diagnosis of the interior lamps.
H2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command ON and OFF. Observe the door ajar warning indicator. • **Does the door ajar warning indicator turn on when triggered on, and turn off when triggered off?**	**Yes** GO to H3 . **No** GO to H4 .
H3 RETRIEVE THE RECORDED FRONT ELECTRONIC MODULE (FEM) AND REAR ELECTRONIC MODULE (REM) DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded FEM and REM DTCs from the continuous and on-demand self-test. • **Are any FEM or REM DTCs recorded?**	**Yes** REFER to the FEM Diagnostic Trouble Code (DTC) Index or the REM Diagnostic Trouble Code (DTC) Index to continue diagnosis of the DTC. **No** GO to H4 .
H4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test I: The Safety Belt Warning Indicator Is Never/Always On

Normal Operation

The safety belt switch is hardwired directly to the restraint control module (RCM). The instrument cluster receives the safety belt switch status from the RCM through circuit 8-GE52 (WH/BK). The RCM monitors the safety belt switch and signals the instrument cluster to turn on the safety belt warning indicator when the safety belt is unfastened.

Possible Causes

- circuit 8-GE52 (WH/BK) open or short to ground
- instrument cluster
- safety belt switch

PINPOINT TEST I: THE SAFETY BELT WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED RESTRAINT CONTROL MODULE (RCM) DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded RCM DTCs from the continuous and on-demand self-test. • **Are any RCM DTCs recorded?**	**Yes** REFER to Section 501-20B to continue the diagnosis of the restraint control system. **No** GO to I2 .
I2 MONITOR THE INSTRUMENT CLUSTER SAFETY BELT PID	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID. • Select and monitor the instrument cluster safety belt PID while fastening and unfastening the safety belt. • **Does the PID agree with the safety belt position?**	**Yes** GO to I4 . **No** GO to I3 .
I3 CHECK CIRCUIT 8-GE52 (WH/BK) FOR AN OPEN AND A SHORT TO GROUND	

• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Disconnect: RCM C310a. • Deactivate the air bag system. REFER to Section 501-20B . • Measure the resistance between the instrument cluster C220a-18, circuit 8-GE52 (WH/BK), harness side and the RCM C310a-22, circuit 8-GE52 (WH/BK), harness side; and between the instrument cluster C220a-18, circuit 8-GE52 (WH/BK), harness side and ground.  • **Is the resistance less than 5 ohms between the instrument cluster and the RCM, and greater than 10,000 ohms between the instrument cluster and ground?**	**Yes** REPAIR the safety belt switch. CONNECT the RCM. REFER to Section 501-20B . ACTIVATE the air bag system. REFER to Section 501-20B . TEST the system for normal operation. **No** REPAIR the circuit. CONNECT the RCM. ACTIVATE the air bag system. REFER to Section 501-20B . TEST the system for normal operation.
I4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: The Low Oil Pressure Warning Indicator Is Never/Always On

Normal Operation

The engine oil pressure switch is a normally closed switch that is hardwired to the front electronic module (FEM) through circuit 8-GC21 (WH/GN). When the oil pressure is within normal ranges, the engine oil pressure switch opens, removing the ground signal to the FEM. The FEM then sends a signal to the instrument cluster through the communication network to turn off the oil pressure warning indicator. When the oil pressure is low, the engine oil pressure switch closes, grounding circuit 8-GC21 (WH/GN). The FEM then sends a low oil pressure signal to the instrument cluster through the communication network to turn on the oil pressure warning indicator.

Possible Causes

- circuit 8-GC21 (WH/GN) open, short to ground, or short to voltage
- engine oil pressure switch
- low engine oil pressure
- FEM
- instrument cluster

PINPOINT TEST J: THE LOW OIL PRESSURE WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
J1 CHECK THE INSTRUMENT CLUSTER LOW OIL PRESSURE WARNING INDICATOR ILLUMINATION	
NOTE: Verify that the oil level is at or near the FULL level. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the low oil pressure warning indicator. • **Does the low oil pressure warning indicator turn on when triggered on, and turn off when triggered off?**	**Yes** GO to J2 . **No** GO to J8 .
J2 MONITOR THE FRONT ELECTRONIC MODULE (FEM) LOW OIL PRESSURE PID	
• Key in OFF position. • Disconnect: Engine Oil Pressure Switch C103. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Engine Oil Pressure PID. • Monitor the FEM engine oil pressure PID. • Connect a fused (10A) jumper wire between the engine oil pressure switch C103-1, circuit 8-GC21 (WH/GN), harness side and ground.  A0004821 • **Does the PID indicate normal engine oil pressure with the jumper wire removed and low engine oil pressure with the jumper wire connected?**	**Yes** GO to J3 . **No** If the oil pressure indicator is inoperative, GO to J4 . If the oil pressure indicator is always on, GO to J6 .
J3 CARRY OUT THE ENGINE OIL PRESSURE TEST	
• Carry out the engine oil pressure test. Refer to Section 303-00 . • **Is the engine oil pressure within specification?**	**Yes** INSTALL a new engine oil pressure switch. CLEAR the DTCs. REPEAT the self-test. **No** REFER to Section 303-00 to continue

	diagnosis of the engine oil pressure.
J4 CHECK CIRCUIT 8-GC21 (WH/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM 201c. • Measure the resistance between the FEM C201c-9, circuit 8-GC21 (WH/GN), harness side and the engine oil pressure switch C103-1, circuit 8-GC21 (WH/GN), harness side.  A0004822 • **Is the resistance less than 5 ohms?**	**Yes** GO to J5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
J5 CHECK CIRCUIT 8-GC21 (WH/GN) FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the FEM C201c-9, circuit 8-GC21 (WH/GN), harness side and ground.  A0004823 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to J7 .
J6 CHECK CIRCUIT 8-GC21 (WH/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201c. • Measure the resistance between the FEM C201c-9, circuit 8-GC21 (WH/GN), harness side and ground.  A0004820 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to J7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
J7 CHECK FOR CORRECT FEM OPERATION	
• Disconnect all the FEM connectors.	**Yes** INSTALL a new FEM. REFER to Section

• Check for: • corrosion • pushed-out pins • Connect all the FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
J8 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	
• Disconnect all the instrument cluster connectors. • Check for: • corrosion • pushed-out pins • Connect all the instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test K: The Charging System Warning Indicator Is Never/Always On

Normal Operation

The charging system is hardwired to the powertrain control module (PCM). The PCM monitors the battery state of charge and provides generator voltage regulator controls, which effectively increase or decrease the generator output to maintain battery charge and to meet electrical demands on the system. The charging system status is then sent from the PCM to the instrument cluster over the communication network. When the generator output is low, the PCM sends a command to the instrument cluster to turn on the charging system warning indicator. Instrument cluster DTC B1317 is set if the battery voltage is greater than 17.82 volts ± 1.9 volts DC. Instrument cluster DTC B1318 is set if the battery voltage is less than 9.0 volts ± 1.5 volts DC. For additional information on the charging system, refer to Section 414-00 .

Possible Causes

- charging system
- PCM
- instrument cluster

PINPOINT TEST K: THE CHARGING SYSTEM WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
K1 CHECK THE CHARGING SYSTEM	
• Check the charging system operation. Refer to Section 414-00 . • **Is the charging system operating correctly?**	**Yes** GO to K2 . **No** REFER to Section 414-00 to continue diagnosis of the charging system.
K2 CHECK THE CHARGING SYSTEM WARNING INDICATOR	

• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the charging system warning indicator. • **Does the charge system warning indicator turn on when triggered on, and turn off when triggered off?**	**Yes** GO to K3 . **No** GO to K4 .
K3 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

K4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Brake Warning Indicator Is Never On

Normal Operation

The instrument cluster uses the brake fluid level, engagement of the parking brake, and the base brake system operation to provide inputs for the BRAKE warning indicator. The brake fluid level sensor is hardwired to the front electronic module (FEM) through circuit 8-GC7 (WH/RD) and is grounded through circuit 31-GC7 (BK/BU). When the brake fluid level is low, the FEM sends a command to the instrument cluster over the communication network to turn on the BRAKE warning indicator. The parking brake system is monitored and controlled by the parking brake module. When the parking brake is applied, the parking brake module sends a command to the instrument cluster over the communication network to turn on the BRAKE warning indicator. The ABS module monitors the brake pressures within the base brake system and provides a message to the instrument cluster over the communication network when a concern exists.

Possible Causes

- circuit 8-GC7 (WH/RD) open
- electronic parking brake system
- brake fluid level sensor

- FEM
- parking brake module
- instrument cluster

PINPOINT TEST L: THE BRAKE WARNING INDICATOR IS NEVER ON

Test Step	Result / Action to Take
L1 CHECK THE INSTRUMENT CLUSTER BRAKE WARNING INDICATOR ILLUMINATION	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on. Observe the brake warning indicator. • **Does the brake warning indicator turn on when triggered on?**	**Yes** GO to L2 . **No** GO to L8 .
L2 CHECK THE BRAKE FLUID LEVEL SWITCH OPERATION	
• Disconnect: Brake Fluid Level Sensor C1395. • **Does the brake warning indicator illuminate?**	**Yes** GO to L5 . **No** GO to L3 .
L3 CHECK THE BRAKE FLUID LEVEL FRONT ELECTRONIC MODULE (FEM) PID	
• Enter the following diagnostic mode on the diagnostic tool: FEM Brake Fluid Level PID. • Select and monitor the FEM brake fluid level PID. • Connect a fused (10A) jumper wire between the brake fluid warning sensor C1395-1, circuit 8-GC7 (WH/RD), harness side and the brake fluid warning sensor C1395-2, circuit 31-GC7 (BK/BU), harness side. A0060988 • **Does the PID read off when the jumper wire is not connected and on when the jumper wire is connected?**	**Yes** GO to L8 . **No** GO to L4 .
L4 CHECK CIRCUIT 8-GC7 (WH/RD) FOR A SHORT TO GROUND	

• Key in OFF position. • Disconnect: FEM C201c. • Measure the resistance between the FEM C201c-11, circuit 8-GC7 (WH/RD), harness side and ground.  A0004840 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to L7 . **No** REPAIR the circuit. TEST the system for normal operation.
L5 CHECK THE ELECTRONIC PARKING BRAKE SYSTEM OPERATION	
• Operate the electronic parking brake system and verify the system operates correctly. • **Does the electronic parking brake system operate correctly?**	**Yes** GO to L6 . **No** REPAIR the electronic parking brake system. REFER to Section 206-05 to continue diagnosis of the electronic parking brake system.
L6 CHECK THE PARKING BRAKE MODULE PARKING BRAKE SWITCH INPUT	
• Enter the following diagnostic mode on the diagnostic tool: Parking Brake Module PID. • Select and monitor the electronic parking brake module apply switch active, and release switch active, PIDs while switching the electronic parking brake on and off. • **Do the apply switch active and release switch active PIDs agree with the switch position?**	**Yes** GO to L8 . **No** GO to L9 .
L7 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

L8 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.

• Connect all the instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
L9 CHECK FOR CORRECT PARKING BRAKE MODULE OPERATION	

• Disconnect all the parking brake module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the parking brake module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new parking brake module. REFER to Section 206-05 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test M: The High Beam Indicator Is Never/Always On

Normal Operation

The instrument cluster uses both headlamp switch position and multifunction switch position inputs to control the high beam indicator. The headlamp switch signal is transmitted to the instrument cluster from the headlamp switch through signal circuit 8-LE21 (WH/GN) and return circuit 9-LE29 (BN/GN). Once the instrument cluster senses the headlamp ON signal, the cluster monitors the resistance through the multifunction switch to determine whether the switch is in the high beam or low beam position. The multifunction switch is hardwired to the instrument cluster.

Possible Causes

- instrument cluster

PINPOINT TEST M: THE HIGH BEAM INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
M1 CHECK THE HIGH BEAM HEADLAMP OPERATION	
• Key in ON position. • Place headlamp switch in the ON position. • Place the multifunction switch in the high beam and then in the low beam position. • Select and monitor the instrument cluster PID high beam.	**Yes** GO to M2 . **No** REFER to Section 417-01 to continue diagnosis of the high beam headlamps.

• **Do the high beam headlamps operate correctly?**	
M2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test N: The Low Washer Fluid Indicator Is Never/Always On

Normal Operation

The low washer fluid switch is hardwired to the front electronic module (FEM) through circuit 8-GC8 (WH/BU) and grounded through circuit 31-GC8 (BK/OG). The FEM monitors the washer fluid level and sends the low washer fluid data to the instrument cluster over the communication network.

Possible Causes

- circuit 8-GC8 (WH/BU) open, or short to ground
- circuit 31-GC8 (BK/OG) open
- low washer fluid switch
- FEM
- instrument cluster

PINPOINT TEST N: THE LOW WASHER FLUID INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
N1 CHECK THE LOW WASHER FLUID WARNING INDICATOR	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. • **Does the low washer fluid warning indicator turn on when triggered on, and turn off when triggered off?**	**Yes** GO to N2 . **No** GO to N6 .
N2 MONITOR THE FEM WASHER FLUID LEVEL PID	

• Key in OFF position. • Disconnect: Washer Fluid Level Switch C138. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Washer Fluid Level PID. • Monitor the FEM washer fluid level PID. • Key in OFF position. • **NOTE:** If the fuse fails, repair the circuit for a short to voltage • Connect a fused (10A) jumper wire between washer fluid level switch C138-2, circuit 8-GC8 (WH/BU), harness side and ground.  A0004841 • Key in ON position. • Monitor the FEM washer fluid level PID. • **Does the PID indicate the fluid level is OK with the jumper wired removed and low fluid level with the jumper wire connected?**	**Yes** REMOVE the jumper wire. GO to N3 . **No** REMOVE the jumper wire. GO to N4 .
N3 CHECK CIRCUIT 31-GC8 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the washer fluid level switch C138-1, circuit 31-GC8 (BK/OG), harness side and ground.  A0004810 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new windshield washer reservoir. REFER to Section 501-16 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
N4 CHECK CIRCUIT 8-GC8 (WH/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201b. • Measure the resistance between the washer fluid level switch C138-2, circuit 8-GC8 (WH/BU), harness side and ground.	**Yes** GO to N5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 A0004806 • **Is the resistance greater than 10,000 ohms?**	
N5 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

N6 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test O: The Anti-Lock Brake System (ABS) Warning Indicator Is Never On

Normal Operation

The status of the anti-lock brake system (ABS) is sent to the instrument cluster over the communication network. The instrument cluster monitors the input and illuminates the ABS warning indicator when a concern is present.

Possible Causes

- ABS module
- instrument cluster

PINPOINT TEST O: THE ANTI-LOCK BRAKE SYSTEM (ABS) WARNING INDICATOR IS NEVER ON

Test Step	Result / Action to Take
O1 CARRY OUT THE INSTRUMENT CLUSTER ANTI-LOCK BRAKE SYSTEM (ABS) WARNING INDICATOR ACTIVE COMMAND USING THE	

DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on. Observe the ABS warning indicator. • **Does the ABS warning indicator illuminate?**	**Yes** GO to O2 . **No** GO to O3 .
O2 CHECK FOR CORRECT ABS MODULE OPERATION	

• Disconnect the ABS module connector.
• Check for:
  • corrosion
  • pushed-out pins
• Connect the ABS module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS module. REFER to Section 206-09 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

O3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test P: The Traction Control And Advance Traction Control Indicators Are Never/Always On

Normal Operation

The traction control status is monitored by the anti-lock brake system (ABS) module. When the traction control is in active mode, a traction active status message is sent to the instrument cluster from the ABS module over the communication network.

Possible Causes

- ABS module
- instrument cluster

PINPOINT TEST P: THE TRACTION CONTROL AND ADVANCE TRACTION CONTROL INDICATORS ARE NEVER/ALWAYS ON

Test Step	Result / Action to Take

P1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the traction control and advanced traction control indicators. • **Do both the traction control and advanced traction control indicators turn on when triggered on and turn off when triggered off?**	**Yes** GO to P2 . **No** GO to P3 .
P2 CHECK FOR CORRECT ABS MODULE OPERATION	

• Disconnect the ABS module connector.
• Check for:
  • corrosion
  • pushed-out pins
• Connect the ABS module connector and make sure it seats correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS module. REFER to Section 206-09 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

P3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Q: The Electronic Throttle Control Indicator Is Never/Always On

Normal Operation

The instrument cluster receives the electronic throttle control status from the powertrain control module (PCM) over the communication network. When a system concern is detected, the PCM sends the instrument cluster a command signal to turn the electronic throttle control indicator ON.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST Q: THE ELECTRONIC THROTTLE CONTROL INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
Q1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the electronic throttle control indicator. • **Does the electronic throttle control indicator illuminate when triggered on and turn off when triggered off?**	**Yes** GO to Q3 . **No** GO to Q2 .
Q2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Q3 CHECK FOR CORRECT POWERTRAIN CONTROL MODULE (PCM) OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: The Malfunction Indicator Lamp (MIL) Is Never/Always On

Normal Operation

The powertrain control module (PCM) monitors and controls the powertrain functions. When a PCM concern is detected, the PCM provides a signal to the instrument cluster over the communication network, and the instrument cluster to turn on the malfunction indicator lamp (MIL).

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST R: THE MALFUNCTION INDICATOR LAMP (MIL) IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
R1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the MIL. • **Does the MIL warning indicator illuminate when triggered on and turn off when triggered off?**	**Yes** GO to R3 . **No** GO to R2 .
R2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

R3 CHECK FOR CORRECT POWERTRAIN CONTROL MODULE (PCM) OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test S: The Turn/Hazard Indicator Is Never/Always On

Normal Operation

The multifunction switch is hardwired to the instrument cluster. Differing resistance ranges are used internally within the multifunction switch to allow the instrument cluster to determine whether the multifunction switch is in the RH or LH turn position. The instrument cluster monitors the input from the multifunction switch and turns on either the RH or LH turn/hazard indicators depending on the switch position. The multifunction switch position status is also sent from the instrument cluster to the front electronic module (FEM) and the rear electronic module (REM) to turn on the exterior lighting.

Possible Causes

- instrument cluster

PINPOINT TEST S: THE TURN/HAZARD INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
S1 CHECK THE TURN SIGNAL AND HAZARD LAMPS OPERATION	
• Key in ON position. • Operate the turn signal on the left and right sides. • Operate the hazard lamps. • **Do the turn signals and hazard lamps operate correctly?**	**Yes** GO to S2 . **No** REFER to Section 417-01 to continue diagnosis of the turn/hazard lamps.
S2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test T: The Steering Wheel Column Lock Warning Indicator Is Never/Always On

Normal Operation

The instrument cluster monitors the key-in-ignition, the ignition switch status, and the steering column lock status. The steering column lock status is sent to the instrument cluster from the input of the steering column lock module over the communication network. The instrument cluster turns on the steering wheel column lock indicator when the ignition switch is in the RUN position and the steering column is locked.

Possible Causes

- steering column lock module
- instrument cluster

PINPOINT TEST T: THE STEERING COLUMN LOCK WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take

T1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. • **Did the steering column lock indicator turn on when triggered on and turn off when triggered off?**	**Yes** REFER to Section 211-04 to continue diagnosis of the steering column lock. **No** GO to T2 .
T2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test U: The Speed Control Indicator Is Never/Always On

Normal Operation

The instrument cluster receives the speed control status from the powertrain control module (PCM) over the communication network. When the speed control is engaged, the PCM provides the instrument cluster with the speed control engaged status message and the instrument cluster illuminates the speed control indicator.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST U: THE SPEED CONTROL INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
U1 VERIFY THAT THE SPEED CONTROL AND SPEEDOMETER OPERATE CORRECTLY	
• Verify that the speed control and the speedometer operate correctly. • **Do the speed control and speedometer operate correctly?**	**Yes** GO to U2 . **No** If the speed control does not operate correctly, REFER to Section 310-03 . If the speedometer does not operate correctly, Go To Pinpoint Test

	E .
U2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the speed control indicator. • **Does the speed control indicator illuminate when triggered on and turn off when triggered off?**	**Yes** GO to U3 . **No** GO to U4 .
U3 CHECK FOR CORRECT POWERTRAIN CONTROL MODULE (PCM) OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

U4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test V: The Engine Over-Temperature Warning Indicator Is Never/Always On

Normal Operation

The engine temperature status is transmitted to the powertrain control module (PCM) from the cylinder head temperature sensor through circuit 8-RJ33 (WH/VT). The PCM transmits an over-temperature status to the instrument cluster over the communication network. When the engine temperature, as measured at the cylinder head, reaches 121° C (250° F), the PCM enters the first stage of the fail-safe mode and sends a command message to the instrument cluster to turn on the engine over-temperature warning indicator. Instrument cluster DTC U1073 is set if the instrument cluster fails to receive the engine temperature status from the PCM.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST V: THE ENGINE OVER-TEMPERATURE WARNING INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
V1 CHECK THE OPERATION OF THE TEMPERATURE GAUGE	
• Start and run the engine until the normal engine operating temperature is reached. • Key in OFF position. • **Does the temperature gauge operate correctly?**	**Yes** GO to V2 . **No** Go To Pinpoint Test C .
V2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the engine over-temperature indicator. • **Does the engine over-temperature indicator illuminate when triggered on and turn off when triggered off?**	**Yes** GO to V4 . **No** GO to V3 .
V3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

V4 CHECK FOR CORRECT POWERTRAIN CONTROL MODULE (PCM) OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.

• Connect all the PCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test W: The Air Bag Warning Indicator Is Never On

Normal Operation

The restraint control module (RCM) is hardwired to the instrument cluster through circuit 31S-JA14 (BK/GN). When the RCM detects a system concern, a DTC is set and the RCM removes the ground to the instrument cluster to turn on the AIR BAG warning indicator. RCM DTC B1869 is set if circuit 31S-JA14 (BK/GN) is open or shorted to ground. RCM DTC B1870 is set if circuit 31S-JA14 (BK/GN) is shorted to power.

Possible Causes

- circuit 31S-JA14 (BK/GN) open, short to ground, or short to voltage
- RCM
- instrument cluster

PINPOINT TEST W: THE AIR BAG WARNING INDICATOR IS NEVER ON

Test Step	Result / Action to Take
W1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS RESTRAINT CONTROL MODULE (RCM)	
• Check for recorded restraint control module (RCM) DTCs from the continuous and on-demand self-tests. • **Are any RCM DTCs recorded?**	**Yes** If RCM DTC B1869 or B1870 are retrieved, GO to W3 . For all other RCM DTCs, REFER to Section 501-20B . **No** GO to W2 .
W2 CHECK THE RESTRAINT CONTROL MODULE (RCM) OPERATION	
NOTE: The resistance during this test should be greater than 10,000 ohms for approximately 4 seconds then switch to less than 5 ohms during bulb prove out. • Disconnect: Instrument Cluster C220a. • Key in ON position. • Measure the resistance between the instrument cluster C220a-22, circuit 31S-JA14 (BK/GN), harness side and ground.	**Yes** GO to W6 . **No** GO to W3 .

 A0060989 • **Is the resistance less than 5 ohms during prove out then change to greater than 10,000 ohms?**	
W3 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Deactivate the air bag system. Refer to Section 501-20B . • Disconnect: Restraint Control Module (RCM) C310a. • Measure the resistance between the instrument cluster C220a-22, circuit 31S-JA14 (BK/GN), harness side and the RCM C310a-19, circuit 31S-JA14 (BK/GN), harness side; and between the instrument cluster C220a-22, circuit 31S-JA14 (BK/GN), harness side and ground.  N0013091 • **Is the resistance less than 5 ohms between the instrument cluster and the RCM, and greater than 10,000 ohms between the instrument cluster and ground?**	**Yes** GO to W4 . **No** REPAIR the circuit. CONNECT the RCM. ACTIVATE the air bag system. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test.
W4 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the instrument cluster C220a-22, circuit 31S-JA14 (BK/GN), harness side and ground.  A0060991 • **Is any voltage indicated?**	**Yes** REPAIR the circuit. CONNECT the RCM. ACTIVATE the air bag system. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test. **No** GO to W5 .
W5 CHECK FOR CORRECT RCM OPERATION	

• Disconnect all the RCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new RCM. REFER to Section 501-20B . TEST the system for normal operation.

• Connect all the RCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.
W6 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test X: The Check Fuel Cap Indicator Is Never/Always On

Normal Operation

The powertrain control module (PCM) monitors the fuel tank evaporative system for significant leaks that occur following refueling of the vehicle. If a fuel tank pressure change greater than a -23.7 kPa (7 in Hg) of vacuum within 30 seconds after refueling has occurred, or there is an excessive purge (fuel vapor) flow greater than 454 g (0.06 lb) per minute, the PCM sets DTC P0457 and sends a message to the instrument cluster over the communication network to turn on the check fuel cap indicator.

Possible Causes

- PCM
- instrument cluster

PINPOINT TEST X: THE CHECK FUEL CAP INDICATOR IS NEVER/ALWAYS ON

Test Step	Result / Action to Take
X1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
NOTE: Once the check fuel cap indicator turns on, it does not turn off unless the fuel cap has been correctly secured and the vehicle has been driven for several minutes. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command.	**Yes** GO to X2 . **No** GO to X3 .

• Select the instrument cluster warning lamps and chime active command. Trigger the all lamps active command on and off. Observe the check fuel cap indicator. • **Does the check fuel cap indicator illuminate when triggered on and turn off when triggered off?**	
X2 CHECK FOR CORRECT POWERTRAIN CONTROL MODULE (PCM) OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

X3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they are seated correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Y: The Integrated Circuit Display Is Inoperative

Normal Operation

The digital transmission range (TR) sensor is hardwired directly to the powertrain control module (PCM), which provides the instrument cluster with the transmission range data over the communication network. The instrument cluster PRNDL display is controlled by the instrument cluster, indicating the appropriate range as transmitted to the instrument cluster by the PCM. The front electronic module (FEM) and rear electronic module (REM) both control and monitor the exterior illumination. When an exterior lamp is inoperative, the FEM or REM notify the instrument cluster over the communication network and the instrument cluster illuminates the warning center message LAMP OUT.

Possible Causes

- PCM
- FEM
- REM
- instrument cluster

PINPOINT TEST Y: THE INTEGRATED CIRCUIT DISPLAY IS INOPERATIVE

Test Step	Result / Action to Take
Y1 VERIFY THE INTEGRATED CIRCUIT DISPLAY OPERATION	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster display segment control II active command. Trigger the segments active command. • **Do all of the segments illuminate?**	**Yes** If the PRNDL is inoperative, REFER to Section 307-01 to continue diagnosis of the digital transmission range (TR) sensor. If the odometer is inoperative, Go To Pinpoint Test F . If the warning center display is inoperative, GO to Y2 . **No** GO to Y4 .
Y2 MONITOR THE EXTERIOR LIGHTING	
• Key in ON position. • Place the headlamp switch in the parking lamps ON position. • Monitor the exterior lighting. • **Do all the exterior lamps operate correctly?**	**Yes** GO to Y3 . **No** REFER to Section 417-01 to continue diagnosis of the exterior lamps.
Y3 RETRIEVE THE RECORDED FRONT ELECTRONIC MODULE (FEM) AND REAR ELECTRONIC MODULE (REM) DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded REM and FEM DTCs from the continuous and on-demand self-tests. • **Are any FEM or REM DTCs recorded?**	**Yes** REFER to Section 419-10 to continue diagnosis of the DTCs. **No** GO to Y4 .
Y4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Z: The Instrument Cluster Is Inoperative

Normal Operation

With the ignition switch in the START/RUN position, the instrument cluster receives power from the central junction box (CJB) fuse(s) 4 (5A), circuit 15-GG14 (GN/RD), and 17 (5A), circuit 15-JA14 (GN/BK). With the ignition switch in the RUN/ACC position, power is received from the CJB fuse 13 (5A), circuit 75-GG15 (YE/GN). With the ignition switch in the OFF position, the instrument cluster receives its power from the CJB fuse 20 (10A), circuit 29-GG11 (OG/BU). The instrument cluster grounding is accomplished through circuits 91-GG11 (BN/RD) and 31-AL11 (BK).

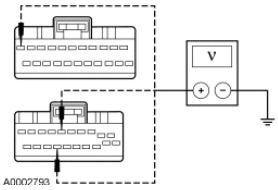
Possible Causes

- circuit 15-GG14 (GN/RD) open
- circuit 15-JA14 (GN/BK) open
- circuit 29-GG11 (OG/BU) open
- circuit 31-AL11 (BK) open
- circuit 75-GG15 (YE/GN) open
- circuit 91-GG11 (BN/RD) open
- instrument cluster

PINPOINT TEST Z: THE INSTRUMENT CLUSTER IS INOPERATIVE

Test Step	Result / Action to Take
Z1 CHECK THE HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
• Key in OFF position. • Disconnect: Instrument Cluster C220b. • Measure the voltage between the instrument cluster C220b-3, circuit 29-GG11 (OG/BU), harness side and ground.  A0002797 • **Is the voltage greater than 10 volts?**	**Yes** GO to Z2 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
Z2 CHECK THE HOT IN RUN POWER SUPPLY CIRCUITS	
• Disconnect: Instrument Cluster C220a. • Key in ON position. • Measure the voltage between the instrument cluster, harness side and ground as follows: **Instrument Cluster Connector-Pin** / **Circuit**	**Yes** GO to Z3 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C220a-11	15-JA14 (GN/BK)
C220b-6	15-GG14 (GN/RD)
C220b-17	75-GG15 (YE/GN)



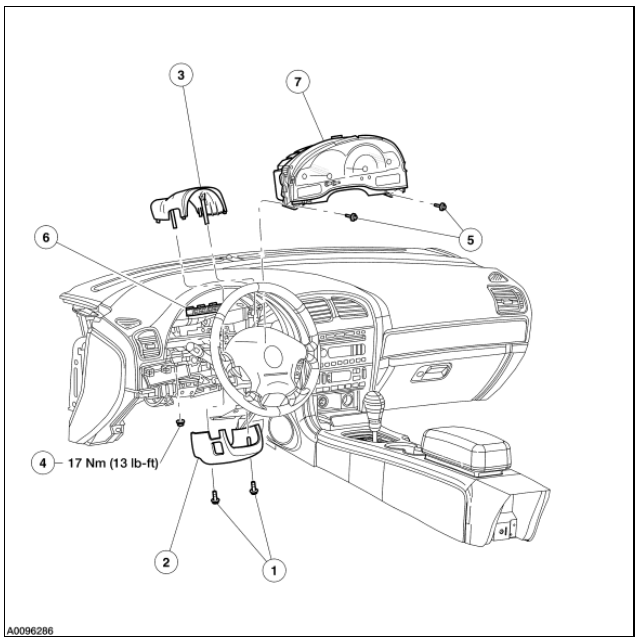
- **Are the voltages greater than 10 volts?**

Z3 CHECK THE GROUND CIRCUITS	
• Key in OFF position. • Measure the resistance between the instrument cluster C220b-13, circuit 91-GG11 (BN/RD), harness side and ground; and between the instrument cluster C220a-6, circuit 31-AL11 (BK), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** GO to Z4 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
Z4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Instrument Cluster in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Instrument Cluster

Printable View (123 KB)



Item	Part Number	Description
1	504246	Steering column shroud screws (2 required)
2	3530	Lower steering column shroud
3	3533	Upper steering column shroud
4	700390	Steering column nuts (4 required)
5	805589	Instrument cluster screws (4 required)
6	14401	Instrument cluster electrical connectors
7	10849	Instrument cluster

Removal and Installation

NOTE: Prior to removal of the instrument cluster, it is necessary to upload the instrument cluster configuration information to the diagnostic tool. This information needs to be downloaded into the new instrument cluster once installed. For additional information, refer to Section 418-01 .

NOTE: If either the instrument cluster or the powertrain control module (PCM) are installed, update, or configured, both modules require a parameter reset to allow both modules to recognize the passive anti-theft system (PATS) keys.

Failure to carry out the parameter reset to both the instrument cluster and the PCM may result in a no start condition.

1. Tilt the steering column to the lowest position and telescope (extend) the steering column to the farthest position.

2. Disconnect the battery. For additional information, refer to Section 414-01 .

3. Remove the instrument panel cluster finish panel. For additional information, refer to Section 501-12 .

4. Remove the instrument panel steering column cover and reinforcement. For additional information, refer to Section 501-12 .

5. Remove the 2 screws and the upper and lower steering column shrouds.

6. Loosen the 4 steering column nuts.
   - To install, tighten to 17 Nm (13 lb-ft).

7. Remove the 4 instrument cluster screws.
   - ⚠ **CAUTION: To avoid damage to the instrument cluster lens, place a protective cloth over the upper steering column before removing the instrument cluster.**

     Pull the instrument cluster out from the instrument panel and disconnect the electrical connectors.

8. **NOTE:** Once the new instrument cluster is installed, it is necessary to download the module configuration information from the diagnostic tool into the new instrument cluster. For additional information, refer to Section 418-01 .

   To install, reverse the removal procedure.

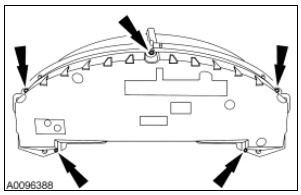
9. Following installation of the instrument cluster, carry out the Parameter Reset and Key Programming procedure in this section.
   The parameter reset must also be carried out for the PCM. For additional PCM information, refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Warning Indicator Bulb

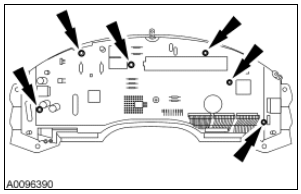
Printable View (60 KB)

Removal and Installation

1. Remove the instrument cluster. For additional information, refer to Instrument Cluster in this section.
2. Remove the 5 screws and the rear cover.

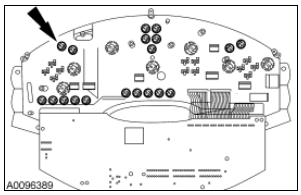


3. Remove the 6 screws and position the circuit board aside.



4. **NOTE:** To remove a warning indicator bulb, rotate the bulb one quarter turn counterclockwise and lift it straight out from the instrument cluster.

   Remove the warning indicator bulb in question.



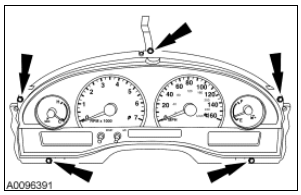
5. To install, reverse the removal procedure.

Instrument Cluster Lens

Printable View (31 KB)

Removal and Installation

1. Remove the instrument cluster. For additional information, refer to Instrument Cluster in this section.
2. Remove the 5 screws and the lens.



3. To install, reverse the removal procedure.

Horn switch pad bolts	6		53

Horn

Printable View (8 KB)

There are 3 separate conditions that can cause the horn to sound. The horn sounds if the driver presses the horn pad, when the remote keyless entry is armed, or during an anti-theft event. The horn system uses a horn relay to provide voltage to the horns while the horn switches and the front electronic module (FEM) provide the control grounds to engage the horn relay. The horn switch is located behind the driver air bag module. For the removal and installation of the horn switch, refer to Horn Switch in this section. The FEM is located behind the LH A-pillar lower trim panel. For removal and installation of the FEM, refer to Section 419-10 .

Horn

Printable View (116 KB)

Refer to Wiring Diagrams Cell 44 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST2502-A	Diagnostic Tool, Restraint System (2 required) 418-F395 (014-R1079)
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

When the horn switch is pressed, a message is sent from the instrument cluster over the network communication link to the FEM. The FEM acknowledges the message and energizes the horn relay by grounding the horn relay coil which allows the dual-note horn to sound.

Inspection and Verification

NOTE: The instrument cluster and the front electronic module (FEM) must be reconfigured upon installation. Refer to Section 418-01 .

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Horns • Horn switches • Horn relay • Clockspring	• Central junction box (CJB) fuse 20 (10A) (instrument cluster) (FEM) • Underhood Auxiliary junction box (AJB) fuse 4 (20A) (horn relay) • Circuitry • Horn relay

	• Clockspring

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - verify that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the instrument cluster, refer to Section 413-01 .
   - No response/not equipped for the FEM, refer to Section 419-10 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out self-test diagnostics for the instrument cluster and the FEM.

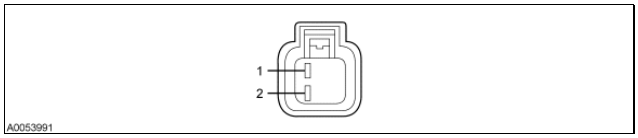
7. If the DTCs retrieved are related to the concern, refer to Section 419-10 .

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

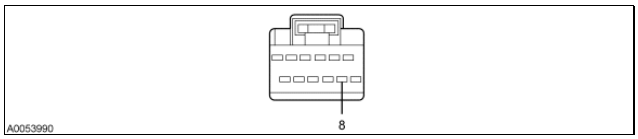
Symptom Chart
Connector Circuit Reference

Horn C131



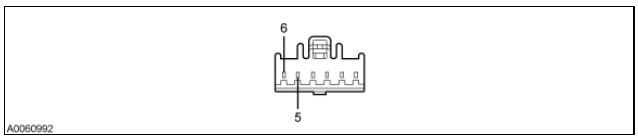
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-GJ6 (BK/YE) ground	0 volts, less than 5 ohms between the horn and ground.
2	30S-GJ6 (RD/YE) power feed to the horn	Greater than 10 volts when the horn switch is pressed, 0 volts when the horn switch is released. Less than 5 ohms between the horn and the horn relay. Greater than 10,000 ohms between the horn and ground.

Front Electronic Module (FEM) C201c



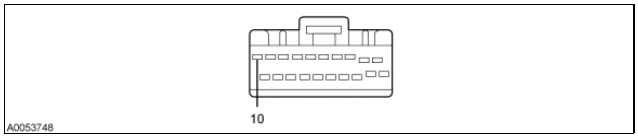
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	91S-GJ7 (BN/RD) switched ground circuit	Greater than 10 volts at all times. Less than 5 ohms between the FEM and the horn relay. Greater than 10,000 ohms between the FEM and ground.

Clockspring C218b



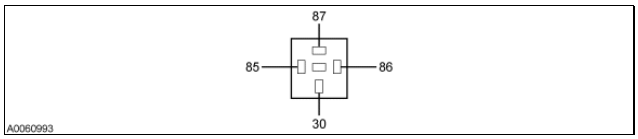
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31-GJ1 (BK/BU) switched ground circuit	0 volts, less than 5 ohms between the clockspring and ground.
6	10-GJ9 (GY/OG) horn input to the instrument cluster	Less than 5 ohms between the clockspring and the instrument cluster. Greater than 10,000 ohms between the clockspring and ground.

Instrument Cluster C220b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	10-GJ9 (GY/OG) horn ground signal	0 volts, less than 5 ohms between the instrument cluster and the clockspring. Greater than 10,000 ohms between the instrument cluster and ground.

Horn Relay C1006



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30	30-GJ7A (RD/BU) horn relay power	Greater than 10 volts at all times.
85	91S-GJ7 (BN/RD) switched ground circuit	0 volts, less than 5 ohms between the horn relay and the front electronic module (FEM).
86	30-GJ7B (RD/BU) horn relay power	Greater than 10 volts at all times.
87	30S-GJ6 (RD/YE) power feed to the horn	0 volts, less than 5 ohms between the horn relay and the horn.

Pinpoint Test A: The Horn is Inoperative

Normal Operation

The horn switch is grounded through the clockspring by circuit 31-GJ1 (BK/YE). The clockspring provides this ground signal to the instrument cluster through the horn switch on circuit 10-GJ9 (GY/OG). The horn relay control and switched B+ power circuits are supplied by the underhood auxiliary junction box fuse 4 (20A) through circuit 30-GJ7 (RD/BU). The horn relay ground is controlled by the front electronic module (FEM) through circuit 91S-GJ7 (BN/RD). When the horn switch pad is pressed, the instrument cluster sends the FEM a command signal over the communication network to ground the horn relay. The FEM supplies a ground, energizing the horn relay and supplying power to the horn through circuit 30S-GJ6 (RD/YE).

Possible Causes

- circuit 10-GJ9 (GY/OG) open
- circuit 30-GJ7A (RD/BU) open
- circuit 30-GJ7B (RD/BU) open
- circuit 30S-GJ6 (RD/YE) open
- circuit 31-GJ1 (BK/YE) open
- circuit 31-GJ6 (BK/YE) open
- circuit 91S-GJ7 (BN/RD) open
- clockspring
- horn relay
- horn
- horn switch
- FEM
- instrument cluster

PINPOINT TEST A: THE HORN IS INOPERATIVE

⚠ CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connectors.

Test Step	Result / Action to Take
A1 CHECK HORN INPUT PID TO THE INSTRUMENT CLUSTER	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID. • Monitor the instrument cluster horn switch PID while pressing and releasing the horn switch pad. • **Does the PID indicate ON with the horn switch pad pressed, and OFF with the horn switch pad released?**	**Yes** GO to A2 . **No** GO to A3 .
A2 INITIATE THE HORN CONTROL ACTIVE COMMAND	
• Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Trigger the front electronic module (FEM) HORN CONTROL active command. • **Does the horn sound?**	**Yes** GO to A13 . **No** GO to A7 .
A3 CHECK THE OPERATION OF THE HORN SWITCH	
• Key in OFF position. • Remove the driver air bag module. Refer to Section 501-20B . • Connect the 2 restraint system diagnostic tools (418-F395) to the upper clockspring. • ⚠ **WARNING: Make sure there is no one inside the vehicle and there is nothing blocking of set in front of any air bag module when the battery is connected.** • Connect the battery. • Disconnect: Upper Clockspring Connector. • Connect a fused (5A) jumper wire between the upper clockspring pin 5, component side and the upper clockspring pin 6, component side. A0060994 • **Does the horn sound?**	**Yes** REMOVE the jumper wire. INSTALL a new horn switch. REFER to Horn Switch in this section. DISCONNECT the battery. INSTALL the driver air bag module. REFER to Section 501-20B . TEST the system for normal operation. **No** REMOVE the jumper wire. GO to A4 .
A4 CHECK THE OPERATION OF THE CLOCKSPRING	

• Disconnect: Clockspring C218b. • Connect a fused (5A) jumper wire between the clockspring C218b-6, circuit 10-GJ9 (GY/OG), harness side and the clockspring C218b-5, circuit 31-GJ1 (BK/BU), harness side.  A0060995 • **Does the horn sound?**	**Yes** REMOVE the jumper wire. DISCONNECT the battery. INSTALL a new clockspring. REFER to Section 501-20B . INSTALL the driver air bag module. REFER to Section 501-20B . TEST the system for normal operation. **No** REMOVE the jumper wire. GO to A5 .
A5 CHECK CIRCUIT 10-GJ9 (GY/OG) FOR AN OPEN	
• Disconnect the battery. • Install the driver air bag module. Refer to Section 501-20B . • Disconnect: Instrument Cluster C220b. • Measure the resistance between the instrument cluster C220b-10, circuit 10-GJ9 (GY/OG), harness side and the clockspring C218b-6, circuit 10-GJ9 (GY/OG), harness side.  A0060996 • **Is the resistance less than 5 ohms?**	**Yes** GO to A6 . **No** REPAIR the circuit. TEST the system for normal operation.
A6 CHECK CIRCUIT 31-GJ1 (BK/BU) FOR AN OPEN	
• Measure the resistance between the clockspring C218b-5, circuit 31-GJ1 (BK/BU), harness side and ground.  A0060997 • **Is the resistance less than 5 ohms?**	**Yes** GO to A13 . **No** REPAIR the circuit. TEST the system for normal operation.
A7 CHECK THE OPERATION OF THE HORN RELAY	
• Key in OFF position. • Disconnect: Horn Relay C1006. • Carry out the horn relay component test.	**Yes** GO to A8 . **No**

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the relay OK?**	INSTALL a new horn relay. TEST the system for normal operation.
A8 CHECK CIRCUITS 30-GJ7A (RD/BU) AND 30-GJ7B (RD/BU) FOR AN OPEN	
• Measure the voltage between the horn relay C1006-30, circuit 30-GJ7A (RD/BU), harness side and ground; and between the horn relay C1006-86, circuit 30-GJ7B (RD/BU), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to A9 . **No** REPAIR the circuit. TEST the system for normal operation.
A9 CHECK THE HORN OPERATION	
• Connect a fused (5A) jumper wire between the horn relay C1006-87, circuit 30S-GJ6 (RD/YE), harness side and the horn relay C1006-30, circuit 30-GJ7A (RD/BU), harness side.  • **Does the horn sound?**	**Yes** REMOVE the jumper wire. GO to A10 . **No** REMOVE the jumper wire. GO to A11 .
A10 CHECK CIRCUIT 91S-GJ7 (BN/RD) FOR AN OPEN	
• Disconnect: FEM C201c. • Measure the resistance between the horn relay C1006-85, circuit 91S-GJ7 (BN/RD), harness side and the FEM C201c-8, circuit 91S-GJ7 (BN/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to A14 . **No** REPAIR the circuit. TEST the system for normal operation.
A11 CHECK CIRCUIT 30S-GJ6 (RD/YE) FOR AN OPEN	

• Disconnect: Horn C131. • Measure the resistance between the horn relay C1006-87, circuit 30S-GJ6 (RD/YE), harness side and the horn C131-2, circuit 30S-GJ6 (RD/YE), harness side.  N0002934 • **Is the resistance less than 5 ohms?**	**Yes** GO to A12 . **No** REPAIR the circuit. TEST the system for normal operation.
A12 CHECK CIRCUIT 31-GJ6 (BK/YE) FOR AN OPEN	
• Measure the resistance between the horn C131-1, circuit 31-GJ6 (BK/YE), harness side and ground.  N0002935 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new horn. REFER to Horn in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A13 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

A14 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: The Horn is Always On

Normal Operation

The horn switch is grounded through the clockspring by circuit 31-GJ1 (BK/BU). The clockspring provides this ground signal to the instrument cluster through the horn switch on circuit 10-GJ9 (GY/OG). The horn relay control and switched B+ power circuits are supplied by the underhood auxiliary junction box fuse 4 (20A) through circuit 30-GJ7 (RD/BU). The horn relay ground is controlled by the front electronic module (FEM) through circuit 91S-GJ7 (BN/RD). When the horn switch pad is pressed, the instrument cluster sends the FEM a command signal over the communication network to ground the horn relay. The FEM supplies a ground, energizing the horn relay and supplying power to the horn through circuit 30S-GJ6 (RD/YE).

Possible Causes

- circuit 10-GJ9 (GY/OG) short to ground
- circuit 30S-GJ6 (RD/YE) short to voltage
- circuit 91S-GJ7 (BN/RD) short to ground
- clockspring
- horn relay
- horn switch
- FEM
- instrument cluster

PINPOINT TEST B: THE HORN IS ALWAYS ON

Test Step	Result / Action to Take
B1 CHECK HORN INPUT PID FROM THE INSTRUMENT CLUSTER	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID. • Monitor the instrument cluster horn switch PID. • **Does the PID always indicate ON?**	**Yes** GO to B2 . **No** GO to B5 .
B2 CHECK THE HORN SWITCH OPERATION	
• Key in OFF position. • Remove the drive air bag module. REFER to Section 501-20B . • Connect the 2 restraint system diagnostic tools (418-F395) to the upper clockspring. • ⚠ **WARNING: Make sure there is no one inside the vehicle and there is nothing blocking or set in front of any air bag module when the battery is connected.** • Connect the battery. • Disconnect: Upper clockspring. • **Does the horn stop sounding?**	**Yes** INSTALL a new horn switch. REFER to Horn Switch in this section. DISCONNECT the battery. INSTALL the driver air bag module. REFER to Section 501-20B . TEST the system for normal operation. **No** GO to B3 .
B3 CHECK THE CLOCKSPRING OPERATION	
• Disconnect: Clockspring C218b.	**Yes** INSTALL a new clockspring. REFER to Section

• **Does the horn stop sounding?**	501-20B . DISCONNECT the battery. INSTALL the driver air bag module. REFER to Section 501-20B . TEST the system for normal operation. **No** GO to B4 .
B4 CHECK CIRCUIT 10GJ-9 (GY/OG) FOR A SHORT TO GROUND	
• Connect: Upper Clockspring. • Disconnect the battery. • INSTALL the driver air bag module. REFER to Section 501-20B . • Disconnect: Instrument Cluster C220b. • Measure the resistance between the instrument cluster C220b-10, circuit 10-GJ9 (GY/OG), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B9 . **No** REPAIR the circuit. TEST the system for normal operation.
B5 CHECK CIRCUIT 30S-GJ6 (RD/YE) FOR A SHORT TO VOLTAGE	
• Disconnect: Horn Relay C1006. • **Does the horn stop sounding?**	**Yes** GO to B6 . **No** REPAIR the circuit. TEST the system for normal operation.
B6 CHECK THE HORN RELAY OPERATION	
• Key in OFF position. • Disconnect: Horn Relay C1006. • Carry out the relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the horn relay OK?**	**Yes** GO to B7 . **No** INSTALL a new horn relay. TEST the system for normal operation.
B7 CHECK CIRCUIT 91S-GJ7 (BN/RD) FOR A SHORT TO GROUND	
• Disconnect: Front Electronic Module (FEM) C201c. • Measure the resistance between the horn relay C1006-85, circuit 91S-GJ7 (BN/RD), harness side and ground.	**Yes** GO to B8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 • **Is the resistance greater than 10,000 ohms?**	
B8 CHECK FOR CORRECT FEM OPERATION	

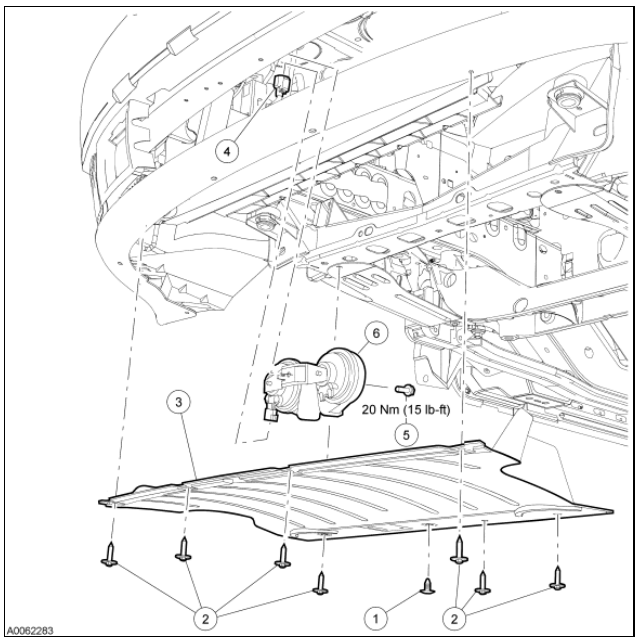
• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

B9 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Horn

Printable View (166 KB)



Item	Part Number	Description
1	389358	Front splash shield pin-type retainer
2	801165	Front splash shield bolts (7 required)
3	17B635	Front splash shield
4	14290	Horn electrical connectors
5		Horn bolt
6	13A803	Horn

Removal and Installation

1. Withe the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the front splash shield
   - Remove the 7 bolts.
   - Remove the pin type retainer.

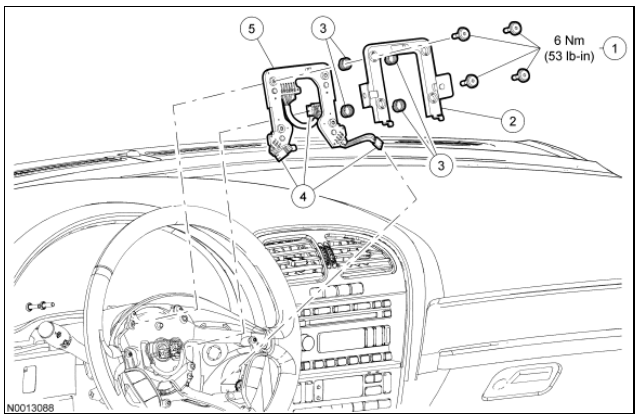
3. Disconnect the horn electrical connector.

4. Remove the bolt and the horn.
   - To install, tighten to 20 Nm (15 lb-ft).

5. To install, reverse the removal procedure.

Horn Switch

Printable View (127 KB)



Item	Part Number	Description
1		Horn switch pad bolts (part of horn switch) (4 required)
2		Horn switch pad (part of horn switch)
3		Horn switch springs (part of horn switch) (4 required)
4		Horn switch electrical connectors
5	13A876	Horn switch

Removal and Installation

1. Remove the driver air bag module. For additional information, refer to Section 501-20B .

2. **NOTE:** The 4 horn switch springs are not attached. To avoid losing the springs, use caution when removing the horn switch.

   Remove the horn switch.

   1. Remove the 4 horn switch plate bolts.
      - To install, tighten to 6 Nm (53 lb-in).
   2. Remove the horn switch plate and the 4 horn switch springs.
   3. Disconnect the horn switch electrical connector and remove the horn switch.

3. To install, reverse the removal procedure.

Information And Message Center

Printable View (7 KB)

The message center display is a green vacuum fluorescent, fixed format display. The message center display is integral to the instrument cluster. The message center is controlled by the 4 message center switches (FUEL, RESET, STATUS, and SETUP).

Information And Message Center

Printable View (153 KB)

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Refer to Wiring Diagrams Cell 66 for schematic and connector information.

Special Tool(s)

ST1137-A	73 III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

The message center is an integral part of the instrument cluster. The message center communicates with the powertrain control module (PCM), the front electronic module (FEM), the rear electronic module (REM), and the anti-lock brake system (ABS) module over the communication network. As a technician, it is important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the communication network to another module?
- which module controls the output of the feature.

Display Information

The display modes are:

- fuel (average fuel economy, distance to empty)
- setup
- system status
- warning
- temporary alert

The message center information can be selected by pressing any of the following 4 buttons:

- FUEL
- RESET
- SETUP
- STATUS

The setup display and the status display times-out and default to the fuel blank display function. The temporary alert display interrupts the current display to show the status of an event that has just happened. The warning display interrupts the current display until cleared or reset by the driver.

Status Displays

The status displays are timed modes and default back to the fuel blank display function. The status display modes are:

- oil life %
- AC air filter life %
- charging system
- low oil
- engine temperature
- brake fluid level
- washer fluid level
- driver door
- passenger door
- driver rear door
- passenger rear door
- luggage compartment lid
- headlamps
- front turn lamps
- side repeater lamps
- rear turn lamps
- stoplamps
- tail lamps
- traction control
- advance trac

Setup Displays

The setup displays are timed modes and default back to the fuel blank display function. The setup display modes are:

- English/metric units
- autolocks on, autolocks off
- easy exit seat on, easy exit seat off
- autolamp delay
- lock chirp on, lock chirp off
- language

Warning Messages

The warning messages can interrupt the display until cleared or reset by the driver. The warning messages are single cycle, non-resettable, and repetitive warning messages. The single cycle warning messages are:

- change oil now (0%)
- change oil soon (1%-5%)
- low oil level
- low washer fluid level
- low brake fluid level
- check headlamps
- check brake lamps

- check tail lamps
- check front turn lamps
- check rear turn lamps
- change A/C air filter soon
- luggage compartment lid
- check fuel cap
- service park brake
- apply park brake

The single cycle warning messages display once whenever the ignition switch is turned to the ON position or a fault occurs in a system and can be cleared by pressing the RESET button.

The repetitive warning messages are:

- check charging system
- low fuel level
- check transmission
- transmission overheated

The repetitive warning messages are displayed at a fixed interval whenever the ignition switch is turned to the ON position or the ACC position. To remove a repetitive warning message, press the RESET button. The message recurs after 10 minutes or until the warning condition is corrected.

The non-resettable warning messages display whenever the ignition switch is turned to the ON position and a fault occurs in a system. The fault must be corrected to clear the non-resettable warning messages.

The non-resettable warning messages are:

- stop engine safely
- driver door ajar
- passenger door ajar
- driver rear door ajar
- passenger rear door ajar
- decklid ajar switch
- park brake on
- ETC-engine failsafe mode

Temporary Alert Messages

The temporary alert display interrupts the current display to show the status of an event that has just happened. The temporary alert messages are:

- autolamp delay
- memory recall/save
- traction control
- advance trac
- speed control ON/OFF status

Inspection and Verification

NOTE: A new instrument cluster and front electronic module (FEM) must be reconfigured upon installation. Refer to Section 418-01 .

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Washer fluid level • Fuel tank • Engine coolant level • Accessory drive belt • Engine oil level • Brake fluid level	• Central junction box (CJB) fuse(s): ♦ 4 (5A) ♦ 13 (5A) ♦ 19 (15A) ♦ 17 (5A) ♦ 20 (10A) • Battery junction box (BJB) fuse(s): ♦ 22 (20A) • Circuitry. • Instrument cluster.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the instrument cluster, Section 413-01 .
   - No response/not equipped for the electronic parking brake module, refer to Section 206-05 .
   - No response/not equipped for the FEM, refer to Section 419-10 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved are related to the concern, go to the Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Diagnostic Trouble Code (DTC) Index

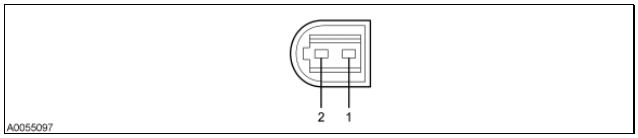
DTC	Description	Source	Action
B1205	EIC Switch-1 Assembly Circuit Failure	Instrument Cluster	Go To Pinpoint Test C .
B1479	Low Washer Fluid Level Switch Circuit Failure	FEM	Go To Pinpoint Test F .

Symptom Chart

Symptom Chart

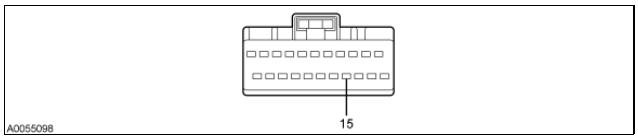
Connector Circuit Reference

Washer Fluid Level Switch C138



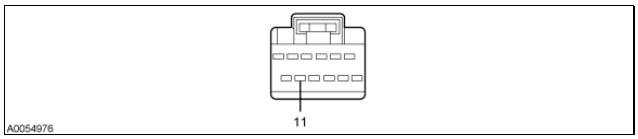
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-GC8 (BK/OG) ground circuit	0 volts, less than 5 ohms between the washer fluid level switch and ground.
2	8-GC8 (WH/BU) voltage signal from the front electronic module (FEM) to the washer fluid level switch.	Less than 5 ohms between the washer fluid level switch and the FEM. Greater than 10,000 ohms between the washer fluid level switch and ground.

Front Electronic Module (FEM) C201b



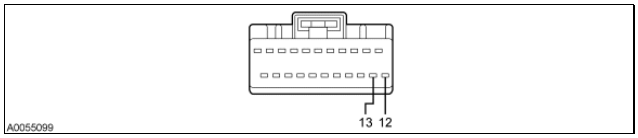
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15	8-GC8 (WH/BU) signal from the FEM to the washer fluid level switch.	Less than 5 ohms between the FEM and the washer fluid level switch. Greater than 10,000 ohms between the washer fluid level switch and ground.

FEM C201c



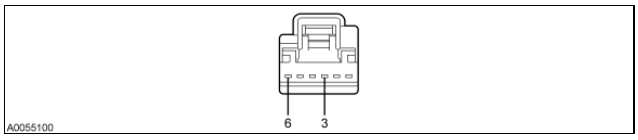
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	8-GC7 (WH/RD) signal circuit to the brake fluid level switch from the FEM.	Less than 5 ohms between the FEM and the brake fluid level switch.

Instrument Cluster C220a



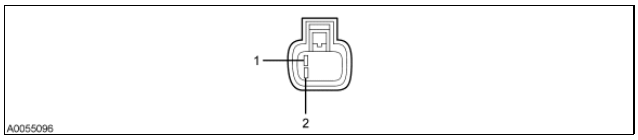
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	9-GG25 (BN/WH) signal circuit from the instrument cluster to the message center switch.	0 volts, less than 5 ohms between the instrument cluster and the message center switch. Greater than 10,000 ohms between the instrument cluster and ground.
13	7-GG25 (YE/VT) signal return circuit from the message center switch to the instrument cluster.	0 volts, less than 5 ohms between the instrument cluster and the message center switch. Greater than 10,000 ohms between the instrument cluster and ground.

Message Center Switch C253



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	7-GG25 (YE/VT) signal return circuit from the message center switch to the instrument cluster.	0 volts, less than 5 ohms between the message center switch and the instrument cluster. Greater than 10,000 ohms between the message center switch and ground.
6	9-GG25 (BN/WH) signal circuit from the instrument cluster to the message center switch.	0 volts, less than 5 ohms between the message center switch and the instrument cluster. Greater than 10,000 ohms between the message center switch and ground.

Brake Fluid Level Sensor C1395



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GC7 (WH/RD) signal circuit to the brake fluid level sensor from the front electronic module (FEM).	Less than 5 ohms between the brake fluid level sensor and the FEM.
2	31-GC7 (BK/BU) ground circuit from the brake fluid level sensor.	Less than 5 ohms between the brake fluid level sensor and ground.

Pinpoint Test A: The Message Center Is Not Operating Correctly

Normal Operation

The message center display is located in the instrument cluster. The message center functionality is controlled through the message center switches, which are hardwired to the instrument cluster through return circuit 7-GG25 (YE/VT) and supply circuit 9-GG11 (BN/WH). The message center switches uses a different resistance value for each switch to allow the instrument cluster to determine which switch is pressed.

Possible Causes

- instrument cluster
- circuitry
- message center switch

PINPOINT TEST A: THE MESSAGE CENTER IS NOT OPERATING CORRECTLY

Test Step	Result / Action to Take
A1 CHECK THE MESSAGE CENTER DISPLAY OPERATION USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster display segment control active command and trigger the display segments active command on. Observe the message center display.	**Yes** The system is OK. If the FUEL, RESET, SETUP or STATUS buttons are inoperative, Go To Pinpoint Test C . **No** GO to A2 .

• **Does the message center illuminate all segments?**	
A2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test B: The Lampout Warning Indicator Is Inoperative

Normal Operation

The front electronic module (FEM) and the rear electronic module (REM) communicate the lamp status to the instrument cluster over the communication network. The message center uses that information to indicate when a lamp is out.

Possible Causes

- instrument cluster

PINPOINT TEST B: THE LAMPOUT WARNING INDICATOR IS INOPERATIVE

NOTE: Verify that the front electronic module (FEM) and the rear electronic module (REM) operate correctly and communicate with the instrument cluster.

Test Step	Result / Action to Take
B1 CHECK THE EXTERIOR LAMP OPERATION	
• Turn the headlamp switch to the headlamps ON position and monitor all the exterior lamps. • **Do all the exterior lamps operate correctly?**	**Yes** GO to B2 . **No** REFER to Section 417-01 to continue diagnosis of the exterior lamps.
B2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

• Connect all the instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	TEST The system for normal operation.

Pinpoint Test C: The Message Center Switch Does Not Operate Correctly

Normal Operation

The message center switch uses circuits 9-GG25 (BN/WH) and 7-GG25 (YE/VT) to communicate the requested switch function to the instrument cluster.

Possible Causes

- circuit 9-GG25 (BN/WH) open or short
- circuit 7-GG25 (YE/VT) open or short
- message center switch
- instrument cluster

PINPOINT TEST C: THE MESSAGE CENTER SWITCH DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
C1 RETRIEVE THE RECORDED INSTRUMENT CLUSTER DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded instrument cluster DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** If DTC B1205 is retrieved, GO to C3 . For all other DTCs, REFER to Section 419-10 . **No** GO to C2 .
C2 CHECK THE MESSAGE CENTER SWITCH PID	
• Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID. • Select and monitor the instrument cluster message center switch PIDs while pressing each message center button (FUEL, RESET, SETUP and STATUS). • **Does each PID agree with each button position?**	**Yes** GO to C5 . **No** GO to C3 .
C3 CHECK CIRCUIT 9-GG25 (BN/WH) FOR AN OPEN AND A SHORT TO GROUND	

• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Disconnect: Message Center Switch C253. • Measure the resistance between the instrument cluster C220a-12, circuit 9-GG25 (BN/WH), harness side and the message center switch C253-6, circuit 9-GG25 (BN/WH), harness side; and between the instrument cluster C220a-12, circuit 9-GG25 (BN/WH), harness side and ground.  N0002014 • **Is the resistance less than 5 ohms between the instrument cluster and the message center switch, and greater than 10,000 ohms between the instrument cluster and ground?**	**Yes** GO to C4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C4 CHECK CIRCUIT 7-GG25 (YE/VT) FOR AN OPEN AND A SHORT TO GROUND	
• Measure the resistance between the instrument cluster C220a-13, circuit 7-GG25 (YE/VT), harness side and the message center switch C253-3, circuit 7-GG25 (YE/VT), harness side; and between the instrument cluster C220a-13, circuit 7-GG25 (YE/VT), harness side and ground.  N0002015 • **Is the resistance less than 5 ohms between the instrument cluster and the message center switch, and greater than 10,000 ohms between the instrument cluster and ground?**	**Yes** INSTALL a new message center switch. REFER to Message Center Switch in this section. CLEAR the DTCS. TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C5 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Indicator does Not Operate Correctly Low Fuel Level Display

Normal Operation

The fuel level status is communicated to the instrument cluster over the communication network. The instrument cluster then communicates the fuel level status to the message center.

Possible Causes

- instrument cluster

PINPOINT TEST D: THE INDICATOR DOES NOT OPERATE CORRECTLY LOW FUEL LEVEL DISPLAY

Test Step	Result / Action to Take
D1 RETRIEVE THE RECORDED REM AND INSTRUMENT CLUSTER DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
NOTE: The fuel gauge does not change indication unless there have been at least 11 liters (3 gallons) of fuel added or removed between ignition switch cycles. • Check for recorded REM and instrument cluster DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** If DTCs are retrieved, REFER to Section 419-10 to continue diagnosis of the DTCs. **No** GO to D2 .
D2 CHECK THE FUEL GAUGE OPERATION	
• Key in ON position. • Observe the fuel gauge operation. • **Does the fuel gauge operate correctly?**	**Yes** GO to D3 . **No** REFER to Section 413-01 to continue diagnosis of the fuel gauge.
D3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test E: The Indicator Is Inoperative Oil Life Status, A/C Filter Life

Normal Operation

The instrument cluster tracks the engine run time and mileage. The message center uses that information to display the remaining interval until the next recommended maintenance procedure.

Possible Causes

- odometer
- instrument cluster

PINPOINT TEST E: THE INDICATOR IS INOPERATIVE OIL LIFE STATUS, A/C FILTER LIFE

Test Step	Result / Action to Take
E1 CHECK THE ODOMETER OPERATION	
• Monitor the odometer operation. • **Does the odometer operate correctly?**	**Yes** GO to E2 . **No** REFER to Section 413-01 to continue diagnosis of the odometer.
E2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test F: The Indicator Does Not Operate Correctly Low Washer Fluid Level Display

Normal Operation

The washer fluid level switch is open when the washer fluid level is high. When the washer fluid level is low, the switch closes circuit 8-GC8 (WH/BU) with the ground circuit 31-GC8 (BK/OG) to signal the front electronic module (FEM) that the washer fluid level is low. The FEM communicates the washer fluid level status to the instrument cluster over the communication network. The message center uses that information to display the low washer fluid message.

Possible Causes

- circuit 8-GC8 (WH/BU) open or short to ground
- circuit 31-GC8 (BK/OG) open
- instrument cluster
- washer fluid level switch
- FEM

Test Step	Result / Action to Take
F1 CHECK THE LOW WASHER FLUID MESSAGE DISPLAY	
• Disconnect: Washer Fluid Level Switch C138. • Connect a fused (5A) jumper wire between the washer fluid level switch C138-2, circuit 8-GC8 (WH/BU), harness side and ground.  A0004841 • Key in START position. • **Does the message center display LOW WASHER FLUID?**	**Yes** REMOVE the jumper wire, GO to F2 . **No** LEAVE the jumper wire connected, GO to F3 .
F2 CHECK CIRCUIT 31-GC8 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the washer fluid level switch C138-1, circuit 31-GC8 (BK/OG), harness side and ground.  A0004810 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new washer fluid level switch. REFER to Section 501-16 . CLEAR the DTCs. REPEAT the self-test. operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
F3 CHECK THE FRONT ELECTRONIC MODULE (FEM) PID	
• Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Washer Fluid Level PID . • Monitor the FEM washer fluid level PID. • Remove the jumper wire. • Monitor the FEM washer fluid level PID. • **Does the PID read low with the jumper wire connected and OK with the jumper wire disconnected?**	**Yes** GO to F5 . **No** GO to F4 .
F4 CHECK CIRCUIT 8-GC8 (WH/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between the washer fluid level switch C138-2, circuit 8-GC8 (WH/BU), harness side and the FEM C201b-15, circuit 8-GC8 (WH/BU), harness side; and between the washer fluid level switch C138-2, circuit 8-GC8 (WH/BU), harness side and ground.	**Yes** GO to F6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 • **Is the resistance less than 5 ohms between the washer fluid level switch and the FEM, and greater than 10,000 ohms between the washer fluid level switch and ground?**	
F5 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

F6 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test G: The Indicator Does Not Operate Correctly Low Brake Fluid Level Display

Normal Operation

The brake fluid level sensor resistance is high when the brake fluid level is high. When the brake fluid level is low, the resistance to circuit 8-GC7 (WH/RD) is low and is a signal the front electronic module (FEM) that the brake fluid level is low. The FEM communicates the brake fluid level status to the instrument cluster over the communication network. The message center uses that information to display the low brake fluid message.

Possible Causes

- circuit 8-GC7 (WH/RD) open
- circuit 31-GC7 (BK/BU) open
- brake fluid level sensor
- instrument cluster

- FEM

PINPOINT TEST G: THE INDICATOR DOES NOT OPERATE CORRECTLY LOW BRAKE FLUID LEVEL DISPLAY

Test Step	Result / Action to Take
G1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster Active Command. • Select the instrument cluster warning lamps and chime active command. Trigger all lamps active command on and off. Observe the brake warning indicator. • **Does the brake warning indicator illuminate when triggered on and turn off when triggered off?**	**Yes** GO to G2 . **No** GO to G7 .
G2 CHECK THE BRAKE WARNING INDICATOR	
• Key in OFF position. • Key in ON position. • Monitor the brake warning indicator. • **Does the brake warning indicator continue to illuminate after prove-out?**	**Yes** REFER to Section 413-01 continue the diagnosis of the brake warning indicator. **No** GO to G3 .
G3 CHECK THE LOW BRAKE FLUID LEVEL DISPLAY	
• Monitor the message center for the LOW BRAKE FLUID LEVEL message. • **Is the LOW BRAKE FLUID LEVEL message always displayed?**	**Yes** GO to G7 . **No** GO to G4 .
G4 CHECK THE FEM BRAKE FLUID LEVEL PID	
• Key in OFF position. • Disconnect: Brake Fluid Level Sensor C1395. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Brake Status PID. • Monitor the brake fluid level sensor PID. • Connect a fused (5A) jumper wire between the brake fluid level sensor C1395-1, circuit 8-GC7 (WH/RD), harness side and the brake fluid level sensor C1395-2, circuit 31-GC7 (BK/BU), harness side.	**Yes** REMOVE the jumper wire. INSTALL a new brake fluid level sensor. REFER to Section 206-06 . TEST the system for normal operation. **No** REMOVE the jumper wire. GO to G5 .

 A0060988 • Monitor the brake fluid level sensor PID. • **Does the PID indicate full when the jumper wire is not connected and low when the jumper wire is connected?**	
G5 CHECK CIRCUIT 8-GC7 (WH/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201c. • Measure the resistance between the brake fluid level sensor C1395-1, circuit 8-GC7 (WH/RD) and the FEM C201c-11, circuit 8-GC7 (WH/RD), harness side.  A0061005 • **Is the resistance less than 5 ohms?**	**Yes** GO to G6 . **No** REPAIR the circuit. TEST the system for normal operation.
G6 CHECK CIRCUIT 31-GC7 (BK/BU) FOR AN OPEN	
• Measure the resistance between the brake fluid level sensor C1395-2, circuit 31-GC7 (BK/BU), harness side and ground.  A0061006 • **Is the resistance less than 5 ohms?**	**Yes** GO to G8 . **No** REPAIR the circuit. TEST the system for normal operation.
G7 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

G8 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test H: The Indicator Does Not Operate Correctly Door Ajar Display

Normal Operation

The front electronic module (FEM) and the rear electronic module (REM) communicate the door ajar status to the instrument cluster over the communication network. The message center uses that information to display the door ajar message.

Possible Causes

- instrument cluster

PINPOINT TEST H: THE INDICATOR DOES NOT OPERATE CORRECTLY DOOR AJAR DISPLAY

Test Step	Result / Action to Take
H1 CHECK THE INTERIOR DOME LAMP OPERATION	
NOTE: The instrument panel dimmer switch must be in the DOOR position, not the COURTESY position. • Open and close each of the doors. • **Does the interior dome lamp operate correctly?**	**Yes** GO to H2 . **No** REFER to Section 417-02 to continue diagnosis of the interior lamps.
H2 RETRIEVE THE RECORDED FEM AND REM DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded FEM and REM DTCs from the continuous and on-demand self-test. • **Are any FEM or REM DTCs recorded?**	**Yes** REFER to Section 419-10 to continue diagnosis of the DTCs. **No** GO to H3 .
H3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No

• Connect all the instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test I: The Indicator Does Not Operate Correctly Traction Control

Normal Operation

The traction control indicator is an output signal that is controlled by the anti-lock brake system (ABS) module. The ABS communicates the traction control status to the instrument cluster over the communication network. The message center uses that information to display the traction control message.

Possible Causes

- instrument cluster

PINPOINT TEST I: THE INDICATOR DOES NOT OPERATE CORRECTLY TRACTION CONTROL

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED ABS MODULE DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded ABS module DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to Section 206-09 to continue diagnosis of the DTCs. **No** GO to I2 .
I2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test J: The Indicator Does Not Operate Correctly Check Fuel Cap

Normal Operation

The check fuel cap indicator is an output signal that is controlled by the powertrain control module (PCM). The PCM determines that there is a failure in the vapor management system due to the fuel cap not sealing correctly, the PCM communicates the fuel cap status to the instrument cluster over the communication

network. The message center uses that information to display the check fuel cap message.

Possible Causes

- instrument cluster

PINPOINT TEST J: THE INDICATOR DOES NOT OPERATE CORRECTLY CHECK FUEL CAP

Test Step	Result / Action to Take
J1 RETRIEVE AND RECORD THE PCM DTCs FROM THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded PCM module DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnosis of the DTCs. **No** GO to J2 .
J2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test K: The Indicator Does Not Operate Correctly Electronic Throttle Control

Normal Operation

The electronic throttle control indicator is an output signal that is controlled by the powertrain control module (PCM). The PCM communicates the electronic throttle control status to the instrument cluster over the communication network. The message center uses that information to display the electronic throttle control message.

Possible Causes

- instrument cluster

PINPOINT TEST K: THE INDICATOR DOES NOT OPERATE CORRECTLY ELECTRONIC THROTTLE CONTROL

Test Step	Result / Action to Take

K1 RETRIEVE AND RECORD THE PCM DTCs FROM THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded PCM module DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnosis of the DTCs. **No** GO to K2 .
K2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test L: The Indicator Does Not Operate Correctly Parking Brake

Normal Operation

The parking brake indicator is an output signal that is controlled by the electronic parking brake module. The electronic parking brake module communicates the parking brake status to the instrument cluster over the communication network. The message center uses that information to display the parking brake message.

Possible Causes

- instrument cluster

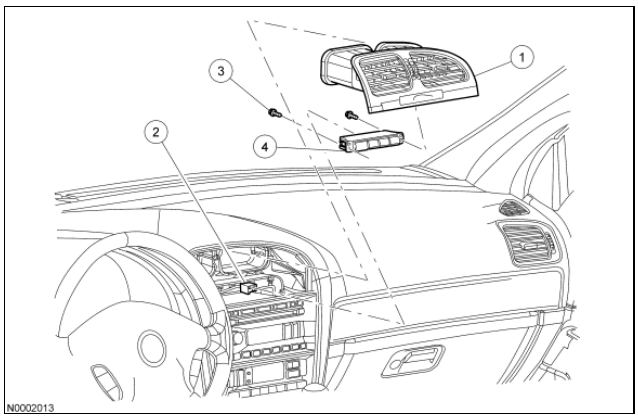
PINPOINT TEST L: THE INDICATOR DOES NOT OPERATE CORRECTLY PARKING BRAKE

Test Step	Result / Action to Take
L1 RETRIEVE AND RECORD THE ELECTRONIC PARKING BRAKE MODULE DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded electronic parking brake module DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to Section 206-05 to continue diagnosis of the DTCs. **No** GO to L2 .
L2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Message Center Switch

Printable View (101 KB)



Item	Part Number	Description
1	19C894	Instrument panel center register panel
2	14401	Message center switch electrical connector
3	701678	Message center switch screws (2 required)
4	10D996	Message center switch

Removal and Installation

1. **NOTE:** The instrument panel center register panel is held in place by spring clips located on the panel.

   Remove the instrument panel center register panel.

   - Disconnect the message center electrical connector.

2. Remove the 2 screws and the message center.

3. To install, reverse the removal procedure.

Warning Devices

Printable View (8 KB)

The instrument cluster controls the warning chime function. The warning chime sounds to remind the driver:

- to turn the headlamps off when exiting the vehicle.
- to remove the ignition key when exiting the vehicle.
- to close the doors/decklid after starting the vehicle.
- to fasten the safety belt after the vehicle is started.
- to disengage the parking brake when driving the vehicle.
- to turn off the turn signal.

The instrument cluster uses various inputs to determine when to sound the warning chime. The warning chime sounds:

- if the headlamps are left on with the ignition switch in the OFF position and the driver door is ajar.
- if the key is in the ignition in the OFF position and the driver door is ajar.
- if a door/decklid is ajar while the ignition switch is in the RUN position.
- if the safety belts are not fastened and the ignition switch is in the RUN position.
- if the parking brake is engaged and the vehicle is in motion.
- if the turn signal is left on for more than 0.8 km (0.5 mile).
- if the air bag warning indicator is inoperative when there are diagnostic trouble codes (DTCs) present.
- if the engine has reached an over-temperature condition.

Warning Devices

Printable View (101 KB)

Refer to Wiring Diagrams Cell 66 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

The instrument cluster controls the following chimes:

- driver or passenger safety belt not fastened warning chime (warning times out)
- key-in-ignition warning (repetitive chime)
- headlamp-on warning (repetitive chime)
- door ajar warning (repetitive chime)
- safety belt warning chime (repetitive chime)
- belt minder warning chime (repetitive chime after a delay and the safety belt chime has completed)
- fail safe cooling chime
- turn lamp left on chime
- airbag warning chime
- electronic parking brake warning chime

The safety belt warning chime warns that the safety belt is not fastened. The safety belt warning chime sounds when the driver or passenger safety belt is not fastened and the ignition switch is turned from the OFF/LOCK or ACC position to the RUN or START position.

The safety belt warning chime stops sounding when the safety belt is fastened, when the ignition switch is switched from the RUN or START position to the OFF/LOCK or ACC position, or when the chime has sounded for approximately 6 seconds.

The safety belt warning chime inputs are:

- ignition switch in the START position
- ignition switch in the RUN position
- driver or passenger safety belt switch data communicated by the restraint control module (RCM) to the instrument cluster on circuit 8-GE52 (WH/BK)

The safety belt warning lamp along with the chime warns that the safety belt is not fastened. The safety belt warning lamp illuminates when the safety belt is not fastened and the ignition switch is turned from the OFF/LOCK or ACC position to the RUN or START position.

The safety belt warning lamp turns off when the safety belt is fastened, the ignition switch is moved from the RUN or START position to the OFF/LOCK or ACC position, or if the lamp is illuminated for approximately 6 seconds.

The safety belt warning lamp inputs are:

- ignition switch in the START position
- ignition switch in the RUN position
- driver or passenger safety belt switch data communicated by the restraint control module (RCM) to the instrument cluster on circuit 8-GE52 (WH/BK)

NOTE: The belt minder is configurable. For additional information, refer to Section 418-01 . To configure without using a diagnostic tool, refer to Safety Belt Minder Deactivating/Activating in this section.

The belt minder feature supplements the current safety belt warning function. The belt minder is enabled after the current safety belt warning is complete. The belt minder reminds the driver that the driver or passenger safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning lamp in the instrument cluster. While activated, the belt minder alternates the chime and indicator from on for 6 seconds to off for 30 seconds.

The door ajar warning chime warns that a door is not fully closed. The chime sounds when any door or the luggage compartment lid becomes ajar while the ignition switch is in the RUN position.

The door ajar warning indicator warns that a door is not fully closed. The door ajar warning indicator illuminates when any door or the luggage compartment lid initially becomes ajar while the ignition switch is in the RUN position.

The door ajar warning indicator turns off when all doors and the luggage compartment lid are closed, or the ignition switch is turned to the OFF/LOCK or ACC position.

The door ajar warning lamp/chime inputs are:

- ignition switch in the START position
- ignition switch in the RUN position
- door ajar data communicated by the front electronic module (FEM) and the rear electronic module (REM) to the instrument cluster on the communication network

The key-in-ignition warning chime sounds when the driver door is ajar and the key is in the ignition switch.

The key-in-ignition warning chime stops sounding when the driver door is closed or the key is removed from the ignition switch.

The key-in-ignition warning chime input is the key-in-ignition switch circuit 30S-GM7 (RD/WH), voltage applied with the key in the ignition switch.

The headlamp on warning chime warns that the headlamps are on when the driver door is ajar and the key is removed from the ignition switch. The headlamps on warning chime sounds if the driver door is ajar, the headlamp switch is in the PARK or HEAD position, and the ignition switch is in the OFF/LOCK position with the key out.

The headlamp on warning chime will stop sounding when any one of the above conditions are removed.

The headlamp on warning chime inputs are:

- ignition switch in the START position
- ignition switch in the RUN position
- key-in-ignition switch circuit 30S-GM7 (RD/WH), no voltage applied with the key removed from the ignition switch

The air bag warning chime warns the driver that the air bag warning indicator lamp is not working and a fault has occurred by sounding a chime when the ignition switch is in the RUN position for more than 20 seconds. When these conditions exist, the restraint control module (RCM) sends a chime request through communication network to the instrument cluster. The instrument cluster then activates the warning chime.

The electronic parking brake warning chime reminds the driver that the parking brake is engaged by intermittently sounding a chime and illuminating the brake warning indicator in the instrument cluster once the vehicle speed has exceeded 4 km/h (3 mph).

The turn signal warnign chime sounds when the vehicle is driven in excess of 0.8 km (0.5 mile) with the right or left turn signal active continuously.

The fail-safe cooling mode has 2 levels of operation, which are transmitted from the powertrain control module (PCM) over the communication network to the instrument cluster. When the engine coolant temperature reaches an over-temperature condition, the PCM provides a level 1 over-temperature signal to the instrument cluster. The instrument cluster positions the temperature gauge in the HOT range, illuminates the over-temperature warning indicator, oil pressure warning indicator, and malfunction indicator lamp (MIL). The instrument cluster also provides an intermittent chime, consisting of 3 tones within a 2-second interval. If the over-temperature continues to increase, the PCM provides the instrumetn cluster with a level 2 over-temperature signal and the intermittent chime strategy sounds 5 tones within a 2-second interval.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Door ajar switches • Key-in-ignition switch • Headlamp switch	• Central junction box (CJB) fuse(s): ♦ 4 (5A) ♦ 13 (5A) ♦ 17 (5A) ♦ 19 (15A) ♦ 20 (10A) • Battery junction box (BJB) fuse(s): ♦ 15 (40A) ♦ 22 (20A) ♦ 25 (40A) • Circuitry. • Instrument cluster.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
    - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
    - No response/not equipped for the instrument cluster, Section 413-01 .
    - No response/not equipped for the electronic parking brake module, refer to Section 206-05 .
    - No response/not equipped for the restraint control module (RCM), refer to Section 501-20B .
    - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved from the RCM are related to the concern, refer to Section 501-20B . If the DTCs retrieved from the instrument cluster are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

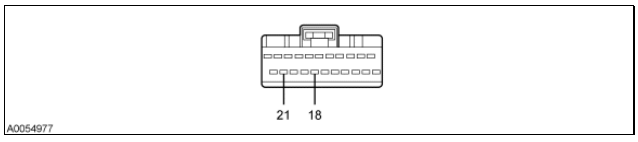
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1352	Ignition Key-In Circuit Failure	Instrument Cluster	Go To Pinpoint Test A .

NOTE: For a complete master list of all instrument cluster DTCs refer to Section 419-10 .

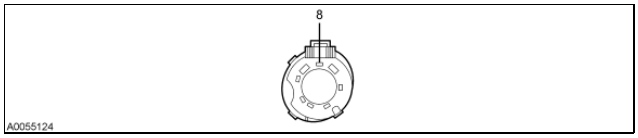
Symptom Chart
Connector Circuit Reference

Instrument Cluster C220a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
18	8-GE52 (WH/BK) safety belt switch input circuit from the restraint control module (RCM).	Less than 5 ohms between the instrument cluster and the RCM. Greater than 10,000 ohms between the instrument cluster and ground.
21	30S-GM7 (RD/WH) key-in-ignition switch input circuit	Greater than 10 volts with the key in the ignition switch. 0 volts without the key in the ignition switch. Greater than 10,000 ohms between the instrument cluster and ground.

Ignition Switch C250



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	30S-GM7 (RD/WH) key-in-ignition switch input circuit	Less than 5 ohms between the ignition switch and the instrument cluster.

Pinpoint Test A: The Key-In-Ignition Chime Does Not Operate Correctly

Normal Operation

When the key is inserted into the ignition key cylinder, the key-in-ignition switch (part of the ignition switch) closes circuit 30S-GM7 (RD/WH) to the instrument cluster. The 12 volt input signals the instrument cluster that the key is inserted. If the instrument cluster detects that the ignition switch is in the OFF or ACC position with the key inserted in the ignition key cylinder and the driver door is ajar, the key-in-ignition warning chime (located in the instrument cluster) sounds.

Possible Causes

- circuit 30S-GM7 (RD/WH) open
- ignition switch
- instrument cluster

PINPOINT TEST A: THE KEY-IN-IGNITION CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
A1 CHECK THE INTERIOR DOME LAMP	
• Open the driver door. • **Does the interior dome lamp illuminate when the driver door is open?**	**Yes** GO to A2 . **No**

	REFER to Section 417-02 to continue diagnosis of the interior dome lamp.
A2 CHECK KEY-IN-IGNITION CHIME OPERATION	
• Insert the ignition key with the ignition switch in the OFF position and the driver door open. • **Does the chime sound?**	**Yes** The system is operating correctly at this time. **No** GO to A3 .
A3 MONITOR THE INSTRUMENT CLUSTER KEY-IN-IGNITION PID WITH THE DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster PID. • Monitor the instrument cluster key-in-ignition PID. • With the key in the ignition switch, the instrument cluster key-in-ignition PID should indicate yes. • **Does the instrument cluster key-in-ignition PID indicate yes?**	**Yes** GO to A6 . **No** GO to A4 .
A4 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR VOLTAGE	
• Remove the ignition key from the ignition switch. • Disconnect: Instrument Cluster C220a. • Insert the ignition key into the ignition switch. • Measure the voltage between the instrument cluster C220a-21, circuit 30S-GM7 (RD/WH), harness side and ground.  A0003815 • **Is the voltage greater than 10 volts?**	**Yes** GO to A6 . **No** GO to A5 .
A5 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR AN OPEN	
• Remove the ignition key from the ignition switch. • Disconnect: Ignition Switch C250. • Measure the resistance between the instrument cluster C220a-21, circuit 30S-GM7 (RD/WH), harness side and the ignition switch C250-8 , circuit 30S-GM7 (RD/WH), harness side.  A0061007	**Yes** INSTALL a new ignition switch. REFER to Section 211-05 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

• **Is the resistance less than 5 ohms?**	
A6 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The Headlamp On Reminder Chime Does Not Operate Correctly

Normal Operation

The headlamp on warning chime sounds when the driver door is opened with the ignition switch in the OFF position and the key out, and the instrument cluster detects the headlamp switch is on. The headlamp on reminder chime does not operate when the autolamp feature is active.

Possible Causes

- instrument cluster

PINPOINT TEST B: THE HEADLAMP ON REMINDER CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
B1 CHECK THE INTERIOR DOME LAMP	
• Open the driver door. • **Does the interior dome lamp illuminate when the driver door is open?**	**Yes** GO to B2 . **No** REFER to Section 417-02 to continue diagnosis of the interior dome lamp.
B2 CHECK THE AUTOLAMPS	
• Turn the autolamps OFF. • Turn the parking lamps ON. • Open the driver door. • **Does the headlamps on reminder chime sound?**	**Yes** The system is operating correctly at this time. **No** GO to B3 .
B3 CHECK THE EXTERIOR LAMPS	
• Turn the parking lamps ON. • Turn the headlamps ON.	**Yes** GO to B4 . **No**

• **Do the exterior lamps operate correctly?**	REFER to Section 417-01 to continue diagnosis of the exterior lamps.
B4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test C: The Safety Belt Warning Chime Does Not Operate Correctly

Normal Operation

The instrument cluster receives the safety belt warning chime input from the restraint control module (RCM) through circuit 8-GE52 (WH/BK). When the ignition switch is in the RUN position, the instrument cluster sounds the safety belt warning chime when it detects a ground at circuit 8-GE52 (WH/BK).

Possible Causes

- circuit 8-GE52 (WH/BK) open or shorted to ground
- instrument cluster
- safety belt switch
- RCM

PINPOINT TEST C: THE SAFETY BELT WARNING CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
C1 RETRIEVE THE RESTRAINT CONTROL MODULE (RCM) RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded RCM DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** REFER to Section 501-20B to continue diagnosis of the RCM. **No** GO to C2 .
C2 CHECK CIRCUIT 8-GE52 (WH/BK) FOR AN OPEN OR A SHORT TO GROUND	

• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Key in ON position. • Measure the resistance between the instrument cluster C220a-18, circuit 8-GE52 (WH/BK), harness side and ground.  • Buckle both front safety belts. • Measure the resistance between the instrument cluster C220a-18, circuit 8-GE52 (WH/BK), harness side and ground.  • **Is the resistance less than 5 ohms with both the front safety belts unbuckled, and greater than 10,000 ohms with both the front safety belts buckled?**	**Yes** GO to C3 . **No** REPAIR the circuit. REFER to Section 501-20B for cautions and warnings before repairing the circuit. TEST the system for normal operation.
C3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Air Bag Warning Chime Does Not Operate Correctly

Normal Operation

The instrument cluster receives the air bag warning chime input from the restraint control module (RCM) through circuit 8-GE52 (WH/BK). The instrument cluster sounds the air bag warning chime when it detects a ground from the RCM on circuit 8-GE52 (WH/BK).

Possible Causes

- instrument cluster
- RCM

PINPOINT TEST D: THE AIR BAG WARNING CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
D1 RETRIEVE THE RESTRAINT CONTROL MODULE (RCM) RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded RCM DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** REFER to Section 501-20B to continue diagnosis of the RCM. **No** GO to D2 .
D2 CHECK THE SAFETY BELT WARNING INDICATOR OPERATION	
• Key in OFF position. • Buckle both front safety belts. • Key in ON position. • Observe the safety belt warning indicator operation. • **Does the safety belt warning indicator illuminate for approximately 6 seconds then turn off?**	**Yes** GO to D3 . **No** Go To Pinpoint Test C .
D3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test E: The Fail Safe Cooling Chime Does Not Operate Correctly

Normal Operation

The powertrain control module (PCM) communicates the fail safe cooling status to the instrument cluster over the communication network.

Possible Causes

- instrument cluster

PINPOINT TEST E: THE FAIL SAFE COOLING CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
E1 RETRIEVE THE POWERTRAIN CONTROL MODULE (PCM) RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded PCM DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnosis. **No** GO to E2 .
E2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test F: The Turn Signal Warning Chime Does Not Operate Correctly

Normal Operation

The instrument cluster sounds the turn signal warning chime when the turn signals have been activated for a distance greater than 0.8 km (0.5 miles).

Possible Causes

- instrument cluster

PINPOINT TEST F: THE TURN SIGNAL WARNING CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
F1 CHECK THE OPERATION OF THE TURN SIGNALS	
• Key in ON position. • Operate the turn signals. • Turn the steering wheel in both directions, with the turn signals activated, to check the turn signal canceling function. • **Do the turn signals operate correctly?**	**Yes** GO to F2 . **No** REFER to Section 417-01 to continue diagnosis of the turn signals.

F2 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test G: The Electronic Parking Brake Warning Chime Does Not Operate Correctly

Normal Operation

The instrument cluster momentarily sounds the electronic parking brake warning chime when the parking brake is applied and again when the parking brake is released. The electronic parking brake module communicates the parking brake status to the instrument cluster over the communication network.

Possible Causes

- instrument cluster
- electronic parking brake system.

PINPOINT TEST G: THE ELECTRONIC PARKING BRAKE WARNING CHIME DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
G1 RETRIEVE THE ELECTRONIC PARKING BRAKE MODULE RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded electronic parking brake module DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** REFER to Section 206-05 to continue diagnosis of electronic parking brake module. **No** GO to G2 .
G2 CHECK THE OPERATION OF THE ELECTRONIC PARKING BRAKE CHIME	
• Key in ON position. • Apply the parking brake. • Release the parking brake. • **Does the electronic parking brake chime sound when the parking brake is applied and again when the parking brake is released?**	**Yes** The system is operating correctly at this time. **No** GO to G3 .
G3 CHECK THE OPERATION OF THE ELECTRONIC PARKING BRAKE USING THE	

DIAGNOSTIC TOOL	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Electronic Parking Brake Module PIDs. • Monitor the parking brake switch PIDs. • Apply the parking brake. • Release the parking brake. • **Do the parking brake switch PIDs agree with the parking brake positions?**	**Yes** GO to G4 . **No** REPAIR the electronic parking brake. REFER to Section 206-05 .
G4 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test H: The Chime Sounds When The Driver Door Is Ajar (No Key In Ignition And Headlamps Off)

Normal Operation

The instrument cluster sounds the warning chime when the driver door is open and the ignition switch is in the OFF position or the headlamps are left on.

Possible Causes

- circuit 30S-GM7 (RD/WH) short to power
- key-in-ignition switch
- instrument cluster

PINPOINT TEST H: THE CHIME SOUNDS WHEN THE DRIVER DOOR IS AJAR (NO KEY IN IGNITION AND HEADLAMPS OFF)

Test Step	Result / Action to Take
H1 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Measure the voltage between the instrument cluster C220a-21, circuit 30S-GM7 (RD/WH), harness side and ground.	**Yes** GO to H2 . **No** GO to H3 .

 A0003915 • **Is any voltage present?**	
H2 CHECK THE KEY-IN-IGNITION SWITCH	
• Key in OFF position. • Disconnect: Ignition Switch C250. • Measure the voltage between the instrument cluster C220a-21, circuit 30S-GM7 (RD/WH), harness side and ground.  A0003915 • **Is any voltage indicated?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** INSTALL a new ignition switch. REFER to Section 211-05 . TEST the system for normal operation.
H3 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

PINPOINT TEST H: THE CHIME SOUNDS WHEN THE DRIVER DOOR IS AJAR (NO KEY IN IGNITION A

Safety Belt Minder Deactivating/Activating

Printable View (9 KB)

Preparation

1. Apply the parking brake before deactivating/activating the safety belt minder.
2. Place the gear selector lever in PARK or NEUTRAL (manual transmission).
3. Place the ignition lock cylinder in the OFF position.
4. Close all the vehicle doors.
5. Unbuckle the driver and the front passenger safety belts.

Deactivating/Activating

1. Turn the ignition lock cylinder to the ON position (do not start the engine).
2. Wait until the safety belt warning lamp turns off (approximately 1 minute).
3. **NOTE:** Step 3 must be completed within 50 seconds after the safety belt warning indicator turns off.

   For the seating position being disabled, at a moderate speed, buckle then unbuckle the safety belt 9 times, ending with the safety belt in the unbuckled state. After this step the safety belt warning indicator illuminates for 3 seconds.
4. Within 10 seconds of the safety belt warning indicator turning on, at a moderate speed, buckle then unbuckle the safety belt.
   - This disables the safety belt minder feature for that seating position, if it is currently enabled. As confirmation, the safety belt warning indicator flashes 4 times per second for 3 seconds.
   - This enables the safety belt minder feature for that seating position, if it is currently disabled. As confirmation, the safety belt warning indicator flashes 4 times per second for 3 seconds, followed by 3 seconds with the indicator off, then the safety belt warning indicator flashes 4 times per second for 3 seconds again.
5. After confirmation, the deactivation/activation procedure is complete.

Printable View (7 KB)

General Specifications

Item	Specification
Azimuth system check object positions 1 (P1) and position 5 (P5) distance from sensor	160 cm (63 in)
Azimuth system check object positions 2 (P2), 3 (P3), and 4 (P4) distance from sensor	5 m (16.4 ft)

Parking Aid

Printable View (7 KB)

The parking aid system sounds a warning to alert the driver of stationary objects near the rear bumper when the REVERSE gear is selected. The parking aid system assists the driver in detecting certain objects while the vehicle moves slowly in REVERSE as follows: at speeds less than 5 km/h (3 mph), the maximum range for detection is 3.5 meters (11.5 ft), at speeds more than 5 km/h (3 mph), the maximum range for detection is 5 meters (16.4 ft). The parking aid system may not detect angular or moving objects.

Parking Aid

Printable View (238 KB)

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

The parking aid system detects objects behind the vehicle when the vehicle is in REVERSE. The parking aid does this by calculating the distance to an object by the use of 2 ultrasonic sensors and 1 radar sensor mounted in the rear bumper. The field is emitted in a semicircular area around the rear of the vehicle. The sensors can detect objects up to 5 meters (16.4 ft) to the rear of the vehicle, 50 cm (1.6 ft) to the rear side of the vehicle, and 16 cm (6 in) above the ground. A 750 Hz variable warning tone is generated by the parking aid module speaker integrated in the parking aid module. The speaker increases its warning tone rate as the vehicle gets closer to an obstacle. When an object is detected within 45 cm (18 in) of the sensors, the warning tone becomes continuous.

The system always enables when the ignition switch is turned to the RUN position and REVERSE gear is selected. The parking aid system is disabled if any fault is detected. The parking aid switch indicator illuminates for 2 seconds when the ignition switch is turned to the RUN position and no fault is detected. If any fault is detected, the parking aid switch indicator flashes, then constantly illuminates when the ignition switch is turned to the RUN position. The parking aid is on the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network, and can be diagnosed with a diagnostic tool.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Central junction box (CJB) fuse 29 (5A) • Circuitry • Parking aid switch

- Parking aid module
- Parking aid sensors

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the parking aid module, Go To Pinpoint Test A .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out the self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved are related to the concern, go to the Parking Aid Module Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Parking Aid Module Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1299	Power Supply Sensor Circuit Short to Ground	Parking Aid Module	Go To Pinpoint Test B .
B1342	ECU is Defective	Parking Aid Module	CLEAR the DTCs. REPEAT the parking aid module self-test. If DTC B1342 is retrieved again, INSTALL a new parking aid module. REFER to Parking Aid Module in this section. CLEAR the DTCs. REPEAT the self-test.
B1627	PRNDL Reverse Input Circuit Failure	Parking Aid Module	Go To Pinpoint Test B .
B2844	Ignition Voltage Out of Range	Parking Aid Module	Go To Pinpoint Test B .
C1700	Left Rear Sensor Circuit Failure or Blockage	Parking Aid Module	CLEAN the rear bumper and sensors with high-pressure water. CLEAR the DTCs. REPEAT the self-test. If the DTC resets, Go To Pinpoint Test B .
C1703	Right Rear Sensor Circuit Failure or	Parking Aid	CLEAN the rear bumper and sensors with high-pressure water. CLEAR the DTCs. REPEAT the self-test. If the DTC resets, Go To

	Blockage	Module	Pinpoint Test B .
C1983	Radar Sensor Fault	Parking Aid Module	CLEAN the rear bumper and sensors with high-pressure water. CLEAR the DTCs. REPEAT the self-test. If the DTC resets, INSTALL a new parking aid radar sensor. REFER to Parking Aid Sensor in this section. CLEAR the DTCs. REPEAT the self-test.
C1984	Radar Sensor Circuit Failure	Parking Aid Module	Go To Pinpoint Test B .
C1985	Parking Aid Switch Stuck Low	Parking Aid Module	Go To Pinpoint Test B .
C1992	Vehicle Speed Circuit Failure	Parking Aid Module	Go To Pinpoint Test B .

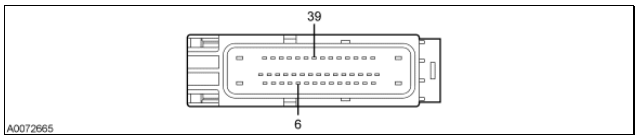
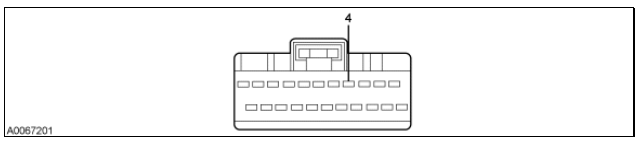
Anti-lock Brake System (ABS) Module C155



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6 (without stability assist)	8-GN14 (WH/BK) input circuit from the ABS module to the parking aid module	Less than 5 ohms between the ABS module and the parking aid module. Greater than 10,000 ohms between the parking aid module and ground.
39 (with stability assist)	8-GN14 (WH/BK) input circuit from the ABS module to the parking aid module	Less than 5 ohms between the ABS module and the parking aid module. Greater than 10,000 ohms between the parking aid module and ground.

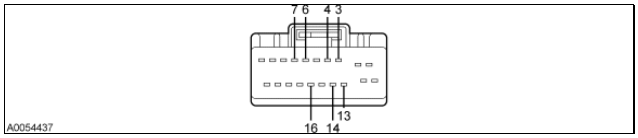
Rear Electronic Module (REM) C420b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

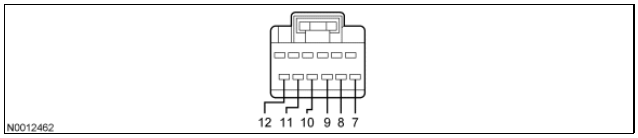
4	8-AD15 (WH/BU) reverse output to the parking aid module	0 volts, less than 5 ohms between the REM and the parking aid module. Greater than 10,000 ohms between the REM and ground.

Parking Aid Module C4014a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	9-GN1 (BN/RD) ground for the parking aid sensor	Less than 5 ohms between the parking aid module and the parking aid sensor.
4	31S-GN21 (BK/OG) ground for the parking aid sensor	Less than 5 ohms between the parking aid module and the parking aid sensor.
6	8-GN20 (WH/RD) input from the parking aid sensor	Less than 5 ohms between the parking aid module and the parking aid sensor.
7	8-GN19 (WH) input from the parking aid sensor	Less than 5 ohms between the parking aid module and the parking aid sensor.
13	7-GN1 (YE/RD) voltage to the parking aid sensors	0 volts, less than 5 ohms between the parking aid module and the parking aid sensor.
14	7-GN21 (YE/BU) voltage to the parking aid sensor	0 volts, less than 5 ohms between the parking aid module and the parking aid sensor.
16	8-GN21 (WH/BU) input from the parking aid sensor	0 volts, less than 5 ohms between the parking aid module and the parking aid sensor.

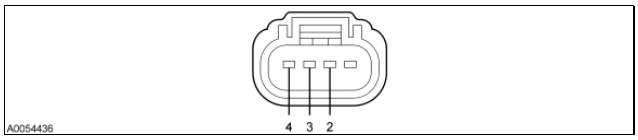
Parking Aid Module C4014b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	91-GN10 (BN) parking aid module ground	0 volts, less than 5 ohms between the parking aid module and ground.
8	8-GN14 (WH/BK) vehicle speed input	0 volts, less than 5 ohms between the parking aid module and the anti-lock brake system (ABS) module.
9	8-GN12 (WH/BU) parking aid enable/disable input from the parking aid switch	0 volts, less than 5 ohms between the parking aid module and the parking aid disable switch.

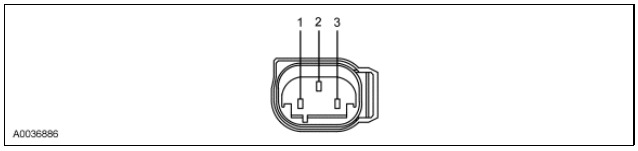
10	7-GN23 (YE/BK) signal circuit to the parking aid disabled lamp	Less than 5 ohms between the parking aid module and the parking aid switch.
11	8-GN11 (WH/RD) reverse input to the parking aid module	Greater than 10 volts with the ignition switch in the ON position and REVERSE gear engaged.
12	20-GN10 (PK/YE) B+ voltage feed, hot in the START/RUN position	Greater than 10 volts with the ignition switch in the START/RUN position. Less than 5 ohms between the parking aid module and the central junction box (CJB).

Parking Aid Radar Sensor C4191



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	8-GN21 (WH/BU) signal circuit to the parking aid module from the parking aid sensor	0 volts, less than 5 ohms between the parking aid radar sensor and the parking aid module.
3	31S-GN21 (BK/OG) parking aid sensor ground through the parking aid module	Less than 5 ohms between the parking aid radar sensor and the parking aid module.
4	7-GN21 (YE/BU) parking aid sensor voltage from the parking aid module	Less than 5 ohms between the parking aid radar sensor and the parking aid module.

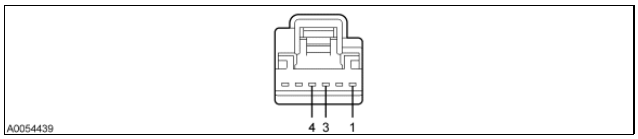
LH Parking Aid Sensor C4192, RH Parking Aid Sensor C4193



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C4192)	8-GN20 (WH/RD) signal circuit to the parking aid module from the parking aid sensor	Less than 5 ohms between the parking aid sensor and the parking aid module.
1 (C4193)	8-GN19 (WH) signal circuit to the parking aid module from the parking aid sensor	Less than 5 ohms between the parking aid sensor and the parking aid module.
2 (C4192)	9-GN20 (BN/RD) parking aid sensor ground through the parking aid module	Less than 5 ohms between the parking aid sensor and the parking aid module.
2 (C4193)	9-GN19 (BN) parking aid sensor ground through the parking aid module	Less than 5 ohms between the parking aid sensor and the parking aid module.
3 (C4192)	7-GN20 (YE/RD) parking aid sensor voltage from the parking aid module	0 volts, less than 5 ohms between the parking aid sensor and the parking aid module.

3 (C4193)	7-GN19 (YE) parking aid sensor voltage from the parking aid module	0 volts, less than 5 ohms between the parking aid sensor and the parking aid module.

Parking Aid Switch C9011



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7-GN23 (YE/BK) signal circuit to the parking aid indicator from the parking aid module	Less than 5 ohms between the parking aid switch and the parking aid module.
3	31-GN12 (BK/OG) ground circuit	Less than 5 ohms between the parking aid switch and the parking aid module.
4	8-GN12 (WH/BU) parking aid enable/disable input from the parking aid switch to the parking aid module	Less than 5 ohms between the parking aid switch and the parking aid module.

Pinpoint Test A: No Communication With The Parking Aid Module

Normal Operation

The parking aid module communicates to the diagnostic tool through circuit 4-GN10 (GY). Voltage is supplied to the parking aid module on circuit 20-GN10 (PK/YE). The parking aid module is grounded through circuit 91-GN10 (BN).

Possible Causes

- circuit 20-GN10 (PK/YE) open
- circuit 91-GN10 (BN) open
- parking aid module

PINPOINT TEST A: NO COMMUNICATION WITH THE PARKING AID MODULE

Test Step	Result / Action to Take
A1 CHECK CIRCUIT 20-GN10 (PK/YE) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Parking Aid Module C4014b. • Key in ON position.	**Yes** GO to A2 . **No** REPAIR the circuit. TEST the system for

• Measure the voltage between the parking aid module C4014b-12, circuit 20-GN10 (PK/YE), harness side and ground.  A0061008 • **Is the voltage greater than 10 volts?**	normal operation.
A2 CHECK CIRCUIT 91-GN10 (BN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the parking aid module C4014b-7, circuit 91-GN10 (BN), harness side and ground.  A0061009 • **Is the resistance less than 5 ohms?**	**Yes** REFER to Section 418-00 to continue diagnosis of the communication network. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test B: The Parking Aid Is Inoperative

Normal Operation

The parking aid system is enabled when the ignition switch is in the RUN position and REVERSE gear is selected. The parking aid module supplies voltage to the parking aid sensors on circuit 7-GN1 (YE/RD) and circuit 7-GN21 (YE/BU). The parking aid module supplies ground to the parking aid sensors on circuit 9-GN1 (BN/RD) and circuit 31S-GN21 (BK/OG). The parking aid module receives a signal from the parking aid sensors on circuits 8-GN19 (WH), 8-GN20 (WH/RD), and 8-GN21 (WH/BU). The system can be enabled/disabled through the parking aid switch. The parking aid speaker is integral to the parking aid module. A 750 Hz variable warning tone is generated by the parking aid speaker. The parking aid speaker increases the warning tone rate as the vehicle gets closer to an obstacle.

Possible Causes

- circuit 7-GN1 (YE/RD) open or short to ground
- circuit 7-GN19 (YE) open or short to ground
- circuit 7-GN20 (YE/RD) open or short to ground
- circuit 7-GN21 (YE/BU) open or short to ground
- circuit 8-GN11 (WH/RD) open
- circuit 8-GN12 (WH/BU) short to ground
- circuit 8-GN14 (WH/BK) open
- circuit 8-GN17 (WH/RD) open or short to ground
- circuit 8-GN19 (WH) open or short to ground
- circuit 8-GN20 (WH/RD) open or short to ground
- circuit 8-GN21 (WH/BU) open or short to ground
- circuit 9-GN1 (BN/RD) open
- circuit 9-GN19 (BN) open

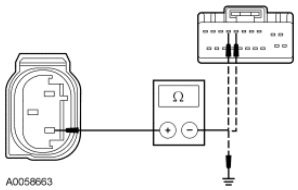
- circuit 9-GN20 (BN/RD) open
- circuit 20-GN10 (PK/YE) open
- circuit 31S-GN21 (BK/OG) open
- anti-lock brake system (ABS) module
- bumper
- parking aid switch
- parking aid sensor
- parking aid module
- rear electronic module (REM)

PINPOINT TEST B: THE PARKING AID IS INOPERATIVE

Test Step	Result / Action to Take
B1 RETRIEVE THE RECORDED PARKING AID MODULE DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded parking aid module DTCs from the continuous and on-demand self-tests. • **Are any DTCs recorded?**	**Yes** If DTC C1700 or C1703 GO to B2 . If DTC C1984, GO to B6 . If DTC B1299, GO to B10 . If DTC B2844, GO to B12 . If DTC C1985, GO to B13 . If DTC B1627, GO to B15 . If DTC C1992, GO to B18 . **No** GO to B21 .
B2 CHECK THE VOLTAGE SUPPLY CIRCUIT	
• Apply the parking brake. • Key in ON position. • Select REVERSE. • Measure the voltage between the parking aid module C4014a-13, circuit 7-GN1 (YE/RD), component side and ground with the connector connected.	**Yes** GO to B4 . **No** GO to B3 .

 A0074648 • **Is the voltage greater than 8 volts?**	
B3 CHECK THE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Key in OFF position. • Disconnect: Parking Aid Module C4014a. • Disconnect: LH Parking Aid Sensor C4192. • Disconnect: RH Parking Aid Sensor C4193. • Measure the resistance between the parking aid module C4014a-13, circuit 7-GN1 (YE/RD), harness side and the LH parking aid sensor C4192-3, circuit 7-GN20 (YE/RD), harness side; and between the parking aid module C4014a-13, circuit 7-GN1 (YE/RD), harness side and the RH parking aid sensor C4193-3, circuit 7-GN19 (YE), harness side.  A0061011 • **Are the resistances less than 5 ohms?**	**Yes** GO to B22 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
B4 CHECK THE SENSOR GROUND CIRCUITS FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the parking aid module C4014a-3, circuit 9-GN1 (BN/RD), harness side and the LH parking aid sensor C4192-2, circuit 9-GN20 (BN/RD), harness side; and between the parking aid module C4014a-3, circuit 9-GN1 (BN/RD), harness side, and the RH parking aid sensor C4193-2, circuit 9-GN19 (BN), harness side.  A0061012 • **Are the resistances less than 5 ohms?**	**Yes** GO to B5 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK THE SIGNAL CIRCUIT FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the parking aid sensor harness side and the parking aid module, harness side; and between the parking aid sensor, harness side and ground as follows:	**Yes** INSTALL a new parking aid sensor. REFER to Parking Aid Sensor in this section. CLEAR the DTCs. REPEAT the self-test.

Parking Aid Sensor Connector-Pin	Parking Aid Module Connector-Pin	Circuit
C4193-1	C4014a-7	8-GN19 (WH)
C4192-1	C4014a-6	8-GN20 (WH/RD)

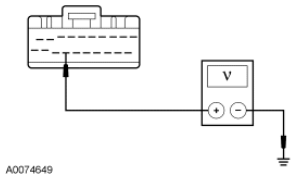


- **Are the resistances less than 5 ohms between the parking aid sensor and the parking aid module, and greater than 10,000 ohms between the parking aid sensor and ground?**

No
REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

B6 CHECK CIRCUIT 7-GN21 (YE/BU) FOR VOLTAGE

- Apply the parking brake.
- Key in ON position.
- Select REVERSE.
- Measure the voltage between the parking aid module C4901a-14, circuit 7-GN21 (YE/BU), component side and ground with the connector connected.



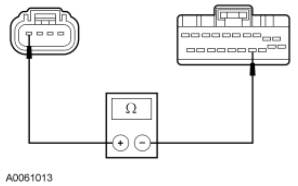
- **Is the voltage greater than 8 volts?**

Yes
GO to B8 .

No
GO to B7 .

B7 CHECK CIRCUIT 7-GN21 (YE/BU) FOR AN OPEN

- Key in OFF position.
- Disconnect: Parking Aid Module C4014a.
- Disconnect: Parking Aid Radar Sensor C4191.
- Measure the resistance between the parking aid radar sensor C4191-4, circuit 7-GN21 (YE/BU), harness side and the parking aid module C4014a-14, circuit 7-GN21 (YE/BU), harness side.



- **Is the resistance less than 5 ohms?**

Yes
GO to B22 .

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

B8 CHECK CIRCUIT 31S-GN21 (BK/OG) FOR AN OPEN

• Measure the resistance between the parking aid module C4014a-4, circuit 31S-GN21 (BK/OG), harness side and the parking aid radar sensor C4191-3, circuit 31S-GN21 (BK/OG), harness side.  A0061014 • **Is the resistance less than 5 ohms?**	**Yes** GO to B9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B9 CHECK CIRCUIT 8-GN21 (WH/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the parking aid radar sensor C4191-2, circuit 8-GN21 (WH/BU), harness side and the parking aid module C4014a-16, circuit 8-GN21 (WH/BU), harness side; and between the parking aid radar sensor C4191-2, circuit 8-GN21 (WH/BU), harness side and ground.  A0061015 • **Is the resistance less than 5 ohms between the parking aid radar sensor and the parking aid module, and greater than 10,000 ohms between the parking aid radar sensor and ground?**	**Yes** INSTALL a new parking aid sensor. REFER to Parking Aid Sensor in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B10 CHECK THE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND	
• Disconnect: Parking Aid Module C4014a. • Measure the resistance between the parking aid module C4014a-13, circuit 7-GN1 (YE/RD), harness side and ground; and between the parking aid module C4014a-14, circuit 7-GN21 (YE/BU), harness side and ground.  A0058666 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B11 . **No** GO to B22 .
B11 CHECK THE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND IN THE LH PARKING AID SENSOR	
• Measure the resistance between the parking aid module C4014a-13, circuit 7-GN1 (YE/RD), harness side and ground while disconnecting the LH and RH parking aid sensors.	**Yes** INSTALL a new parking aid sensor in question. REFER to Parking Aid Sensor in

 A0061016 • Measure the resistance between the parking aid module C4014a-14, circuit 7-GN21 (YE/BU), harness side and ground while disconnecting the parking aid radar sensor.  A0061017 • **Does the resistance change to greater than 10,000 ohms after disconnecting the parking aid sensor(s)?**	this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
B12 CHECK CIRCUIT 20-GN10 (PK/YE) FOR VOLTAGE	
• Disconnect: Parking Aid Module C4014b. • Key in ON position. • Measure the voltage between the parking aid module C4014b-12, circuit 20-GN10 (PK/YE), harness side and ground.  A0061008 • **Is the voltage greater than 10 volts?**	**Yes** GO to B22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B13 CHECK CIRCUIT 8-GN12 (WH/BU) FOR A SHORT	
• Disconnect: Parking Aid Module C4014b. • Measure the resistance between the parking aid module C4014b-9, circuit 8-GN12 (WH/BU), harness side and ground.  A0061018 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B22 . **No** GO to B14 .
B14 CHECK CIRCUIT 8-GN12 (WH/BU) FOR A SHORT TO GROUND	
• Disconnect: Parking Aid Switch C9011. • Measure the resistance between the parking aid module C4014b-9, circuit 8-GN12 (WH/BU), harness side and ground.	**Yes** INSTALL a new parking aid switch. REFER to Parking Aid Switch in this section. CLEAR the DTCs.

 A0061018 • **Is the resistance greater than 10,000 ohms?**	REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B15 CHECK THE REVERSING LAMPS OPERATION	
• Apply the parking brake. • Key in ON position. • Select REVERSE. • Check the reversing lamps operation. • **Do the reversing lamps illuminate?**	**Yes** GO to B16 . **No** REFER to Section 417-01 to continue diagnosis of the reversing lamps.
B16 CHECK CIRCUIT 8-GN11 (WH/RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Parking Aid Module C4014b. • Key in ON position. • Select REVERSE. • Measure the voltage between the parking aid module C4014b-11, circuit 8-GN11 (WH/RD), harness side and ground.  A0061019 • **Is the voltage greater than 10 volts?**	**Yes** GO to B22 . **No** GO to B17 .
B17 CHECK CIRCUIT 8-GN11 (WH/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: Rear Electronic Module (REM) C420b. • Measure the resistance between the parking aid module C4014b-11, circuit 8-GN11 (WH/RD), harness side and the REM C420b-4, circuit 8-AD15 (WH/BU), harness side.  A0061020 • **Is the resistance less than 5 ohms?**	**Yes** GO to B23 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B18 CHECK CIRCUIT 8-GN14 (WH/BK) FOR A SHORT TO GROUND	

• Disconnect: Parking Aid Module C4014b. • Measure the resistance between the parking aid module C4014b-8, circuit 8-GN14 (WH/BK), harness side and ground.  A0061024 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B20 . **No** GO to B19 .
B19 CHECK CIRCUIT 8-GN14 (WH/BK) FOR A SHORT TO GROUND IN THE ANTI-LOCK BRAKE SYSTEM (ABS) MODULE	
• Disconnect: ABS C155. • Measure the resistance between the parking aid module C4014b-8, circuit 8-GN14 (WH/BK), harness side and ground.  A0067204 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new ABS module. REFER to Section 206-09 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B20 CHECK CIRCUIT 8-GN14 (WH/BK) FOR AN OPEN	
• Disconnect: ABS C155. • Measure the resistance between the parking aid module C4014b-8, circuit 8-GN14 (WH/BK), harness side and the ABS C155-39 (with stability assist) or C155-6 (without stability assist), circuit 8-GN14 (WH/BK), harness side.  A0067205 • **Is the resistance less than 5 ohms?**	**Yes** GO to B22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B21 CHECK THE PARKING AID MODULE SENSORS FOR CORRECT ALIGNMENT	
NOTE: If the vehicle has been in an accident, the parking aid module sensors may not be aligned correctly. • Check the bumper for correct alignment. Refer to Elevation System Check in this section. • Check the parking aid sensor(s) and bezel(s) for correct adjustment. Refer to Azimuth System Check in this section. • **Are the bumper and parking aid sensors correctly aligned?**	**Yes** GO to B22 . **No** INSTALL a new bumper. REFER to Section 501-19 . If the vehicle has been in an accident, further body work may be required

	to bring the parking aid sensors into correct alignment.
B22 CHECK FOR CORRECT PARKING AID MODULE OPERATION	

• Disconnect all the parking brake module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the parking aid module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new parking aid module. REFER to Parking Aid Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

B23 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: The Parking Aid Is Inoperative Disable Indicator Is Always On/Never On

Normal Operation

The parking aid module illuminates the disabled indicator by supplying the voltage on circuit 7-GN23 (YE/BK). The parking aid switch disabled indicator is grounded through circuit 31-GN12 (BK/OG).

Possible Causes

- circuit 7-GN23 (YE/BK) open, short to ground, or short to voltage
- circuit 8-GN12 (WH/BU) open
- circuit 31-GN12 (BK/OG) open
- parking aid module
- parking aid switch

PINPOINT TEST C: THE PARKING AID IS INOPERATIVE DISABLE INDICATOR IS ALWAYS ON/NEVER ON

Test Step	Result / Action to Take
C1 RETRIEVE THE RECORDED PARKING AID MODULE DTCs FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS	
• Check for recorded parking aid module DTCs from the continuous and on-demand self-tests. • **Are any parking aid module DTCs recorded?**	**Yes** REFER to the Parking Aid Module Diagnostic Trouble Code (DTC) Index for correct diagnosis. **No** GO to C2 .
C2 CHECK THE PARKING AID INDICATOR OPERATION	
• Key in ON position. • Apply the parking brake. • Select REVERSE. • Monitor the parking aid disabled indicator while pressing the parking aid switch. • Press the parking aid switch to disable the parking aid system. • Press the parking aid switch to enable the parking aid system. • **Is the indicator on after pressing the switch to disable the system, and off after pressing the switch to enable the system?**	**Yes** The system is operating correctly at this time. **No** PLACE the transmission in PARK. GO to C3 .
C3 CHECK CIRCUIT 7-GN23 (YE/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Parking Aid Switch C9011. • Key in ON position. • Measure the voltage between the parking aid switch C9011-1, circuit 7-GN23 (YE/BK), harness side and ground.  A0061026 • **Is any voltage present?**	**Yes** GO to C4 . **No** GO to C5 .
C4 CHECK CIRCUIT 7-GN23 (YE/BK) FOR A SHORT TO VOLTAGE IN THE MODULE	
• Key in OFF position. • Disconnect: Parking Aid Module C4014b. • Key in ON position.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No**

• Measure the voltage between the parking aid switch C9011-1, circuit 7-GN23 (YE/BK), harness side and ground.  A0061026 • **Is any voltage present?**	GO to C11 .
C5 CHECK CIRCUIT 7-GN23 (YE/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between the parking aid switch C9011-1, circuit 7-GN23 (YE/BK), harness side and ground.  A0061027 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C7 . **No** GO to C6 .
C6 CHECK CIRCUIT 7-GN23 (YE/BK) FOR A SHORT TO GROUND IN THE MODULE	
• Disconnect: Parking Aid Module C4014b. • Measure the resistance between the parking aid switch C9011-1, circuit 7-GN23 (YE/BK), harness side and ground.  A0061027 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C11 . **No** REPAIR the circuit. TEST the system for normal operation.
C7 CHECK CIRCUIT 31-GN12 (BK/OG) FOR AN OPEN	
• Measure the resistance between the parking aid switch C9011-3, circuit 31-GN12 (BK/OG), harness side and ground.	**Yes** GO to C8 . **No** REPAIR the circuit. TEST the system for normal operation.

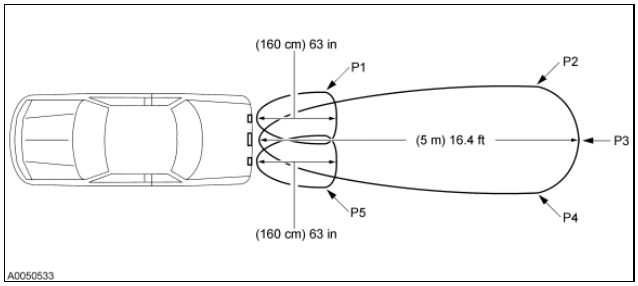
 A0061028 • **Is the resistance less than 5 ohms?**	
C8 CHECK CIRCUIT 8-GN12 (WH/BU) FOR AN OPEN	
• Disconnect: Parking Aid Module C4014b. • Measure the resistance between the parking aid switch C9011-4, circuit 8-GN12 (WH/BU), harness side and the parking aid module C4014b-9, circuit 8-GN12 (WH/BU), harness side.  A0061761 • **Is the resistance less than 5 ohms?**	**Yes** GO to C9 . **No** REPAIR the circuit. TEST the system for normal operation.
C9 CHECK CIRCUIT 7-GN23 (YE/BK) FOR AN OPEN	
• Disconnect: Parking Aid Module C4014b. • Measure the resistance between the parking aid switch C9011-1, circuit 7-GN23 (YE/BK), harness side and the parking aid module C4014b-10, circuit 7-GN23 (YE/BK), harness side.  A0061029 • **Is the resistance less than 5 ohms?**	**Yes** GO to C10 . **No** REPAIR the circuit. TEST the system for normal operation.
C10 CHECK THE PARKING AID SWITCH	
• Measure the resistance between the parking aid switch C9011 pin 1, component side and C9011 pin 3, component side.  A0061030 • **Is the resistance less than 10,000 ohms?**	**Yes** GO to C11 . **No** INSTALL a new parking aid switch. REFER to Parking Aid Switch in this section. TEST the system for normal operation.
C11 CHECK FOR CORRECT PARKING AID MODULE OPERATION	

• Disconnect all the parking aid module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the parking aid module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new parking aid module. REFER to Parking Aid Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Azimuth System Check

Printable View (30 KB)

Maximum Detectable Object Locations



1. **NOTE:** The object used in this system check can be fabricated from a 7.62 cm (3 in) diameter plastic pipe, 1 m (39 in) in length (available as PVC pipe or similar from a hardware or plumbing supply).

   NOTE: The following system check should be carried out with the vehicle on a level surface.

   NOTE: The parking aid system defaults to on when the ignition key is cycled from OFF to ON.

   Key in the ON position, engine OFF.

2. Set the parking brake.

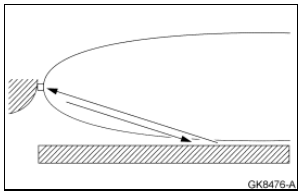
3. Place the transmission selector lever in REVERSE.

4. Verify that the parking aid system detects the specified object when placed within the 5 specified locations (P1, P2, P3, P4, P5). These zones are shown ideally and are not absolute. The pipe should be inside of the locations.

Elevation System Check

Printable View (15 KB)

1. Check the ground reflection verification and sensor coverage pattern.



2. The parking aid system must be checked to make sure that the system does not sense signals from ground reflections.

3. The following system check should be carried out with the vehicle on a 3.0 m wide x 4.5 m long (10 ft x 15 ft) smooth concrete surface, free of all obstacles and noise from fan and pneumatic tools.

4. Key in the ON position, engine OFF.

5. Set the parking brake.

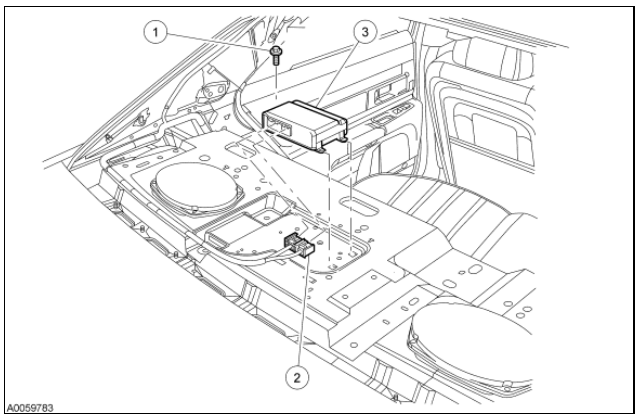
6. Place the transmission selector lever in REVERSE.

7. **NOTE:** No audible alerts should be heard. If audible alerts are heard, make sure the bumper is correctly installed and is not tilted downward so that the sensor is pointing at the ground.

   Verify that no audible alerts are heard.

Parking Aid Module

Printable View (108 KB)



Item	Part Number	Description
1	610936	Parking aid module screw
2	14A005	Parking aid module electrical connector
3	15T850	Parking aid module

Removal and Installation

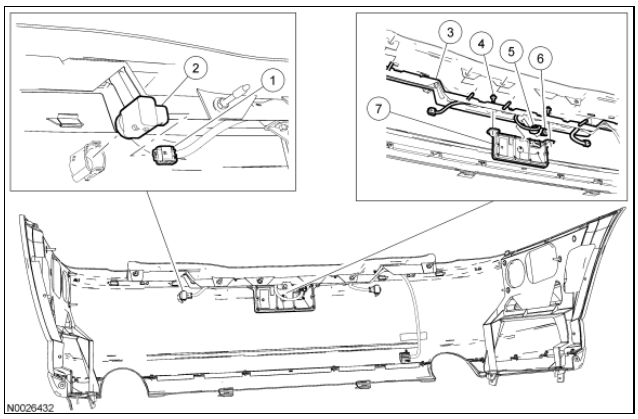
1. Remove the parcel shelf. For additional information, refer to Section 501-05 .

2. Remove the parking aid module and the screw.
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

Parking Aid Sensor

Printable View (108 KB)



Item	Part Number	Description
1		Parking aid ultrasonic sensor electrical connector
2	15K859	Parking aid ultrasonic sensor (2 required)
3	17K835	Rear bumper mounting bracket
4	N606676	Parking aid radar sensor bolts (2 required)
5		Parking aid radar sensor electrical connector
6	N606676	Parking aid radar sensor bolt
7	15K859	Parking aid radar sensor

Removal and Installation

All Sensors

1. Remove the rear bumper cover. For additional information, refer to Section 501-19 .

Ultrasonic Sensors

2. Disconnect the parking aid sensor electrical connector(s).

3. Release the retaining tabs and remove the ultrasonic parking aid sensor(s).

Radar Sensor

4. Disconnect the parking aid ultrasonic sensors.

5. Remove the rear bumper mounting bracket.

6. Remove the 2 parking aid radar sensor bolts.

7. Disconnect the parking aid radar sensor.

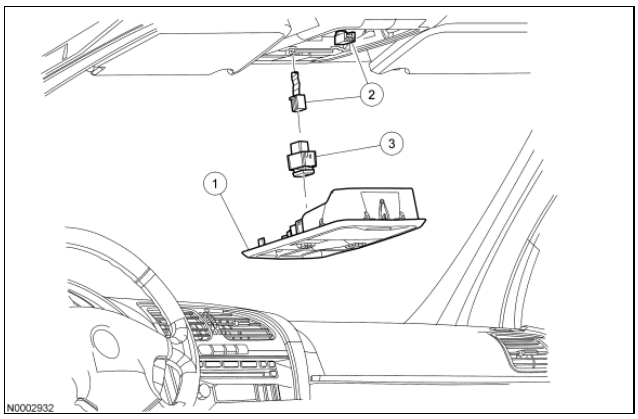
8. Remove the parking aid radar sensor bolt and the radar parking aid sensor.

All Sensors

9. To install, reverse the removal procedure.

Parking Aid Switch

Printable View (73 KB)



Item	Part Number	Description
1	519A58	Overhead console
2	14334	Overhead console electrical connectors (2 required)
3	15A860	Parking aid switch

Removal and Installation

1. **NOTE:** The overhead console is held in place by spring clips located on the panel.

   Remove the overhead console.

   - Disconnect the electrical connectors.

2. Press the retaining tabs and remove the parking aid switch.

3. To install, reverse the removal procedure.

General Specifications

Item	Specification
Voltage	12 volt
Rating	134 amp (max) @ 6,000 generator rpm, approx. 2,000 engine rpm
Generator pulley ratio	2.70:1 (3.0L) 2.88:1 (3.9L)

Charging System

Printable View (7 KB)

The charging system is a negative ground system controlled by the powertrain control module (PCM).

When the engine is started, the generator begins to generate alternating current (AC) which is internally converted to direct current (DC). This current is then supplied to the vehicle electrical system through the positive battery (B+) output circuit of the generator.

Charging System

Printable View (185 KB)

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2173-A	SABRE Premium Battery And Electrical System Tester 010-00736 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

The generator on this vehicle has a built-in voltage regulator set point. The generator decides optimal charging system voltage based on temperature. The generator has a communication line (GEN MON) to the powertrain control module (PCM), which indicates the generator operating duty cycle. This is a pulse width modulated (PWM) signal. The communication line (GEN MON) is used for fault indication as well. The generator has an I-terminal used for initially turning on the generator. The generator also has a battery sense terminal (A-terminal).

B+ Output Circuit 30-BA6 (RD)

Generator output voltage is supplied through the battery positive (B+) output terminal on the rear of the generator to the battery and the electrical system.

Circuit 30-BA25 (RD)

This is the battery voltage sense or A-circuit and is used to sense battery voltage.

Circuit 10-BA25 (GY/RD)

The generator I-circuit terminal is used to turn the generator on initially. Once the generator is turned on, the generator only turns off when the engine is shut down. If the I-circuit 10-BA25 (GY/RD) is open or shorted to ground, the generator does not function. If the engine speed exceeds 3,000 rpm, the generator self-excites, and begins to function normally (the battery light turns off and the generator operates normally) until the engine is turned off. This is a limp-home mode for customer safety

Circuit 8-BA25 (WH/RD)

The generator monitor (GEN MON) communicates the generator load and error conditions to the PCM. The PCM sends a signal to the instrument cluster using the Standard Corporate Protocol (SCP) bus to turn on the charging system warning indicator if there is an error condition.

Inspection & Verification

⚠ WARNING: Batteries contain sulfuric acid. Avoid contact with skin, eyes, or clothing. Also, shield your eyes when working near batteries to protect against possible splashing of the acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

⚠ WARNING: When lifting a plastic-cased battery, excessive pressure on the end walls could cause acid to spew through the vent caps resulting in personal injury, damage to the vehicle or to the battery. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

⚠ CAUTION: Do not make jumper connections except as directed. Incorrect connections may damage the voltage regulator test terminals, fuses, or fusible links.

⚠ CAUTION: Do not allow any metal object to come in contact with the generator housing and internal diode cooling fins. A short circuit may result and burn out the diodes.

NOTE: All voltage measurements are referenced to the negative (-) battery post unless otherwise specified.

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Battery case, posts, hold-down clamp, cables and connections • Generator drive (serpentine) belt • Battery charge • Generator pulley • Generator	• Rear battery junction box (BJB) fuse 15 (5A) • Central junction box (CJB) fuse 17 (5A) • Circuitry • Charging system warning indicator • Cables • Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. Verify the battery condition. Refer to Section 414-01 .

5. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

6. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

7. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP, ISO circuits fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for PCM, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the PCM.

8. If the DTCs retrieved are related to the concern, go to the Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index

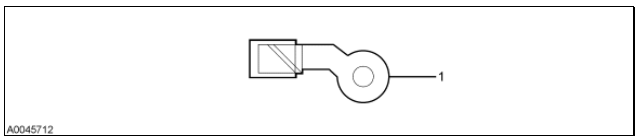
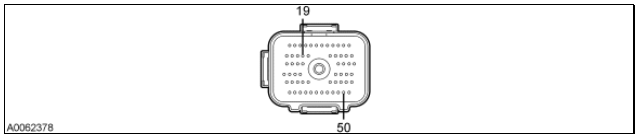
3	30-BA25 (RD) (A-terminal)	12 volts with the key on, engine off (KOEO), 10-12 volts during start, and 13-15 volts with the key on, engine running (KOER).

Generator C102b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30-BA6 (RD)	12 volts with the key on, engine off (KOEO), 10-12 volts during start, and 13-15 volts with the key on, engine running (KOER).

Powertrain Control Module C175c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
19	10-BA25 (GY/RD)	0 volts with the key off, 0 volts with the key on, engine off (KOEO), 0.1-4V in start, and 1-8 volts with the key on, engine running (KOER).
50	8-BA25 (WH/RD) (GEN MON)	0 volts with the key off, 10-14 volts with the key on, engine off (KOEO), 6-12 volts key in start, and alternating between 1-15 volts with the key on, engine running (KOER).

Pinpoint Test A: The Battery is Discharged or Battery Voltage is Low

Normal Operation

The generator output is supplied through the positive battery output (B+) terminal on the rear of the generator to the battery and electrical system. The charging system warning indicator is off with the key ON and the engine running. The charging system warning indicator is on with the key ON and the engine off.

Possible Causes

- battery
- generator

- high key-off current drain(s)

PINPOINT TEST A: THE BATTERY IS DISCHARGED OR BATTERY VOLTAGE IS LOW

Test Step	Result / Action to Take
A1 CHECK THE BATTERY CONDITION	
• Carry out the Battery Condition Test to determine if the battery can hold a charge and is OK for use. Refer to Section 414-01 . • **Does the battery pass the condition test?**	**Yes** GO to A2 . **No** INSTALL a new battery. REFER to Section 414-01 . TEST the system for normal operation.
A2 CHECK THE GENERATOR OUTPUT	
• Carry out the Generator On-Vehicle Tests Load Test and No-Load Test. Refer to the Component Tests in this section. • **Does the generator pass the component tests?**	**Yes** GO to A3 . **No** Go To Pinpoint Test B to continue the diagnosis.
A3 CHECK FOR CURRENT DRAINS	
• Carry out the Battery Drain Test. Refer to the Component Tests in this section. • **Are any circuits causing excessive current drains?**	**Yes** REPAIR the faulty circuit as necessary. TEST the system for normal operation. **No** GO to A4 .
A4 CHECK FOR CURRENT DRAINS THAT SHUT OFF WHEN THE BATTERY IS DISCONNECTED	
• Carry out the Battery Electronic Drains Which Shut Off When the Battery Cable is Disconnected Test. Refer to the Component Tests in this section. • **Are any components causing excessive current drains?**	**Yes** REPAIR the faulty component as necessary. TEST the system for normal operation. **No** Go To Pinpoint Test B to diagnose the charging system.

Pinpoint Test B: The Charging System Warning Indicator is On With the Engine Running (The Charging System Voltage Does Not Increase)

Normal Operation

With the engine running, the charging system warning indicator is off. The A-circuit 30-BA25 (RD) carries 13-15 volts. The generator regulator compares the A-circuit voltage to an internal set point voltage to determine when to operate. This duty cycle is output to the powertrain control module (PCM) on the GEN MON terminal 8-BA25 (WH/RD). In the case of failure, the GEN MON terminal is 0% (0 volts), or 100% duty cycle (12-14 volts). The I-circuit 10-BA25 (GY/RD) carries 1-8 volts with the engine running and is only used to turn the generator on initially. The B+ output circuit 30-BA6 (RD) is the generator output supplied to the battery and the electrical system.

Possible Causes

- generator B+ output circuit 30-BA6 (RD) open or high resistance
- I-circuit 10-BA25 (GY/RD) open or short to ground
- generator
- PCM

PINPOINT TEST B: THE CHARGING SYSTEM WARNING INDICATOR IS ON WITH THE ENGINE RUNNING (THE CHARGING SYSTEM VOLTAGE DOES NOT INCREASE)

Test Step	Result / Action to Take
B1 CHECK GENERATOR B+ OUTPUT CIRCUIT 30-BA6 (RD)	
• Key in OFF position. • Measure the voltage between the generator positive battery (B+) output terminal, circuit 30-BA6 (RD), component side and ground.  • **Is the voltage within 0.5 volt of B+ voltage ?**	**Yes** GO to B2 . **No** REPAIR the circuit. TEST the system for normal operation.
B2 CHECK I-CIRCUIT 10-BA25 (GY/RD) FOR AN OPEN	
• Disconnect: Generator C102a. • Key in START position. • With the engine running, measure the voltage between the generator C102a-2, I-circuit 10-BA25 (GY/RD), harness side and ground.  • **Is the voltage approximately equal to 1 - 8 volts?**	**Yes** GO to B3 . **No** REPAIR the circuit. TEST the system for normal operation.
B3 CHECK FOR A VOLTAGE DROP IN B+ OUTPUT CIRCUIT 30-BA6 (RD)	
• With the engine running, turn on the headlamps and the rear defroster and position the blower motor to the HIGH position. • With the engine at 2,000 rpm, measure the voltage drop between the generator B+ output circuit 30-BA6 (RD), component side and the positive battery terminal.	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REPAIR the high resistance in the B+

 A0012310 • **Is the voltage drop less than 0.5 volt?**	output circuit 30-BA6 (RD). TEST the system for normal operation.

Pinpoint Test C: The Charging System Overcharges (Battery Voltage Is Greater Than 15.5 Volts)

Normal Operation

The generator output is determined by the voltage of the A-circuit 30-BA25 (RD). The A-circuit voltage is compared to a set voltage internal to the regulator and the regulator controls the generator field current to maintain the correct generator output. The set voltage varies with temperature and is typically higher in cold temperatures and lower in warm temperatures.

Possible Causes

- A-circuit 30-BA25 (RD) high resistance
- battery ground connections
- generator

PINPOINT TEST C: THE CHARGING SYSTEM OVERCHARGES (BATTERY VOLTAGE IS GREATER THAN 15.5 VOLTS)

Test Step	Result / Action to Take
C1 CHECK FOR A VOLTAGE DROP IN A-CIRCUIT 30-BA25 (RD)	
• Key in OFF position. • Disconnect: Generator C102a. • Measure the voltage drop between the generator C102a-3, A-circuit 30-BA25 (RD), harness side and the positive battery terminal.  A0043750 • **Is the voltage drop less than 0.5 volt?**	**Yes** GO to C2 . **No** REPAIR the high resistance in the A-circuit 30-BA25 (RD). TEST the system for normal operation.
C2 CHECK THE GENERATOR AND BATTERY GROUND CONNECTIONS	
• Check the ground connections between the generator and the engine, and between the battery and the engine. • **Are all ground connections clean and tight?**	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REPAIR the ground connections as

	necessary. TEST the system for normal operation.

Pinpoint Test D: The Charging System Warning Indicator Is On With The Engine Running And The Battery Increases Voltage

Normal Operation

With the engine running, the charging system warning indicator is off. The A-circuit 30-BA25 (RD) carries 13-15 volts. The generator regulator compares the A-circuit voltage to an internal set point voltage to determine when to operate. This duty cycle is output to the powertrain control module (PCM) on the GEN MON terminal 8-BA25 (WH/RD). In the case of failure, the GEN MON terminal is 0% (0 volts), or 100% duty cycle (12-14 volts). The I-circuit 10-BA25 (GY/RD) carries 1-8 volts with the engine running and is only used to turn the generator on initially. The B+ output circuit 30-BA6 (RD) is the generator output supplied to the battery and the electrical system.

Possible Causes

- I-circuit 10-BA25 (GY/RD) open or shorted to ground
- generator
- GEN MON 8-BA25 (WH/RD) open or shorted to ground
- A-circuit 30-BA25 (RD) open or shorted to ground

PINPOINT TEST D: THE CHARGING SYSTEM WARNING INDICATOR IS ON WITH THE ENGINE RUNNING AND THE BATTERY INCREASES VOLTAGE

Test Step	Result / Action to Take
D1 CHECK I-CIRCUIT 10-BA25 (GY/RD) FOR AN OPEN OR SHORT TO GROUND	
• Key in OFF position. • Disconnect: Generator C102a. • Disconnect: PCM C175c. • Measure the resistance between the PCM C175c-19, circuit 10-BA25 (GY/RD), harness side and the generator C102a-2, circuit 10-BA25 (GY/RD), harness side; and between the PCM C175c-19, circuit 10-BA25 (GY/RD), harness side and ground.  • **Is the resistance less than 5 ohms between the PCM and the generator, and greater than 10,000 ohms between the PCM and ground?**	**Yes** GO to D2 . **No** REPAIR the I-circuit 10-BA25 (GY/RD). TEST the system for normal operation.
D2 CHECK CIRCUIT 8-BA25 (WH/RD) FOR AN OPEN OR SHORT TO GROUND	

• Measure the resistance between the PCM C175c-50, circuit 8-BA25 (WH/RD), harness side and the generator C102a-1, circuit 8-BA25 (WH/RD), harness side; and between the PCM C175c-50, circuit 8-BA25 (WH/RD), harness side and ground.  A0065969 • **Is the resistance less than 5 ohms between the PCM and the generator, and greater than 10,000 ohms between the PCM and ground?**	**Yes** GO to D3 . **No** REPAIR the circuit. TEST the system for normal operation.
D3 CHECK CIRCUIT 30-BA25 (RD) FOR AN OPEN	
• Measure the voltage between the generator C102a-3, circuit 30-BA25 (RD), harness side and ground.  A0041084 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test E: The Charging System Warning Indicator Is Off With The Ignition Switch In The RUN Position And The Engine Off

Normal Operation

The I-circuit 8-BA25 (WH/RD) is 0.1 volt with the key ON (C102a connected) and the engine not running. This turns on the charging system warning indicator. This circuit is also used to turn the charging system warning indicator on if there is a fault in the charging system.

Possible Causes

- generator
- instrument cluster
- powertrain control module (PCM)

PINPOINT TEST E: THE CHARGING SYSTEM WARNING INDICATOR IS OFF WITH THE IGNITION SWITCH IN THE RUN POSITION AND THE ENGINE OFF

Test Step	Result / Action to Take
E1 CHECK THE CHARGING SYSTEM WARNING INDICATOR	

• Key in OFF position. • Disconnect: Generator C102a. • With the engine off, connect a fused (15A) jumper wire between the generator C102a-1, GEN MON circuit 8-BA25 (WH/RD), harness side and ground.  • Key in the ON position. • **Is the charging system warning indicator illuminated?**	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REFER to Section 413-01 for diagnosis and testing of the instrument cluster.

Pinpoint Test F: The Charging System Warning Indicator Flickers or is Intermittent

Normal Operation

With the engine running, the charging system warning indicator should be off. The sense A-circuit 30-BA25 (RD) to the generator field coil carries 13-15 volts. The I-circuit 10-BA25 (GY/RD) is used to turn on the voltage regulator. This circuit carries 0 volts (C102a connected) with the key ON and the engine not running (1-8 volts with the engine running). The positive battery output (B+) circuit 30-BA6 (RD) is the generator output supplied to the battery and the electrical system.

If the I-circuit 10-BA25 (GY/RD) is open or shorted to ground, the generator does not function. If the engine speed exceeds 3,000 rpm, the generator self-excites, and begins to function normally (the battery light turns off and the generator operates normally) until the engine is turned off. This is a limp-home mode for customer safety.

Possible Causes

- rear battery junction box (BJB) fuse 15 (5A) connections
- generator
- generator connections
- instrument cluster

PINPOINT TEST F: THE CHARGING SYSTEM WARNING INDICATOR FLICKERS OR IS INTERMITTENT

Test Step	Result / Action to Take
F1 CHECK FOR LOOSE CONNECTIONS	
• Key in OFF position. • Check all generator, battery, rear battery junction box (BJB) connections for looseness, corrosion, loose or bent terminals, or loose eyelets. • **Are all connections clean and tight?**	**Yes** If the charging system warning indicator flickers, INSTALL a new instrument cluster. REFER to Section 413-01 . If the charging system warning indicator is intermittent, GO to F2 . **No** REPAIR as necessary. TEST the system for normal operation.

F2 CHECK THE FUSE CONNECTIONS	
• Key in START position. • Check the rear BJB fuse 15 (5A) in A-circuit 30-BA25 (RD) for looseness by wiggling the fuse and noting the charging system warning indicator operation. • **Does the charging system warning indicator flicker?**	**Yes** REPAIR the loose fuse connection(s) as necessary. TEST the system for normal operation. **No** GO to F3 .
F3 CHECK A-CIRCUIT 30-BA25 (RD) CONNECTIONS	
• Key in OFF position. • Connect a fused (15A) jumper wire between the generator C102a-3, A-circuit 30-BA25 (RD) (backprobed) and the positive battery terminal.  A0060620 • Key in START position. • Note the charging system warning indicator operation. • **Does the charging system warning indicator illuminate?**	**Yes** GO to F4 . **No** REPAIR any loose connection(s) in A-circuit 30-BA25 (RD). TEST the system for normal operation.
F4 CHECK I-CIRCUIT 10-BA25 (GY/RD) FOR AN OPEN OR SHORT TO GROUND	
• Key in OFF position. • Disconnect: PCM C175c. • Disconnect: Generator C102a. • Measure the resistance between the PCM C175c-19, circuit 10-BA25 (GY/RD), harness side and the generator C102a-2, circuit 10-BA25 (GY/RD), harness side; and between the PCM C175c-19, circuit 10-BA25 (GY/RD), harness side and ground.  A0062380 • **Is the resistance less than 5 ohms between the PCM and the generator, and greater than 10,000 ohms between the PCM and ground?**	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test G: The Generator is Noisy

Normal Operation

The generator is belt-driven by the engine accessory drive system.

Possible Causes

- accessory drive belt system
- generator mounting
- generator

PINPOINT TEST G: THE GENERATOR IS NOISY

Test Step	Result / Action to Take
G1 CHECK FOR ACCESSORY DRIVE NOISE	
• Key in OFF position. • Check the accessory drive belt for damage and correct installation. Check the accessory mounting brackets and the generator pulley for looseness or misalignment. Refer to Section 303-05 . • **Is the accessory drive OK?**	**Yes** GO to G2 . **No** REPAIR as necessary. REFER to Section 303-05 for the diagnosis and testing of the accessory drive system. TEST the system for normal operation.
G2 CHECK THE GENERATOR MOUNTING	
• Check the generator mounting for loose bolts or misalignment. Refer to Section 414-02 . • **Is the generator mounted correctly?**	**Yes** GO to G3 . **No** REPAIR as necessary. REFER to Section 414-02 . TEST the system for normal operation.
G3 CHECK THE GENERATOR FOR ELECTRICAL NOISE	
• Disconnect: Generator C102a. • Key in START position. • Use a stethoscope or equivalent listening device to probe the generator. • **NOTE:** Do not exceed 3,000 rpm or the generator may become electrically functional. • **Is the noise still present?**	**Yes** GO to G4 . **No** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation.
G4 CHECK THE GENERATOR FOR MECHANICAL NOISE	
• Use a stethoscope or equivalent listening device to probe the generator and the accessory drive area for unusual mechanical noise. • **Is the generator the source of the noise ?**	**Yes** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation. **No** REFER to Section 303-00 to diagnose the source of the noise.

Pinpoint Test H: Radio Interference

Normal Operation

The generator suppression equipment reduces interference transmitted through the speakers by the vehicle electrical system.

Possible Causes

- generator
- entertainment system

PINPOINT TEST H: RADIO INTERFERENCE

Test Step	Result / Action to Take
H1 VERIFY THE GENERATOR IS THE SOURCE OF THE RADIO INTERFERENCE	
• Key in START position. • Tune the audio unit to a station where the interference is present. • Key in OFF position. • Disconnect: Generator C102a. • Key in START position. • **NOTE:** Do not exceed 3,000 rpm or the generator may become electrically functional. • With the engine running, note any audio unit interference. • **Is the interference present with the generator disconnected?**	**Yes** REFER to Section 415-00 for diagnosis and testing of the entertainment system. **No** INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation.

Component Tests

Battery Drain Test

NOTE: No production vehicle should have more than a 50 mA (0.050 amp) draw.

Check for current drains on the battery in excess of 50 mA (0.050 amp) with all the electrical accessories off and the vehicle at rest. Current drains are tested with the following procedure:

⚠ WARNING: Do not attempt this test on a lead-acid battery that has recently been recharged. Explosive gases may cause personal injury. Failure to follow these instructions may result in personal injury.

⚠ CAUTION: To prevent damage to the meter, do not crank the engine or operate accessories that draw more than 10A.

NOTE: Many modules draw 10 mA (0.010 amp) or more continuously.

NOTE: Use an in-line ammeter between the battery positive or negative post and its respective cable.

NOTE: Typically, a drain of approximately 1 amp is attributed to an engine compartment lamp, glove compartment lamp, or interior lamp staying on continually. Other component failures or wiring shorts are located by selectively pulling fuses to pinpoint the location of the current drain. When the current drain is found, the meter reading falls to an acceptable level. If the drain is still not located after checking all the fuses, it is due to the generator.

NOTE: To accurately test the drain on a battery, an in-line digital ammeter must be used. Use of a test lamp or voltmeter is not an accurate method due to the number of electronic modules.

1. Make sure the junction box/fuse panels are accessible without turning on the interior lamps or engine compartment lamp.

2. Drive the vehicle at least 5 minutes and over 48 km/h (30 mph) to turn on and exercise the vehicle systems.

3. Allow the vehicle to sit with the key off for at least 40 minutes to allow the modules to time out/power down.

4. Connect a fused (10A) jumper wire between the negative battery cable and the negative battery post to prevent modules from resetting, and to catch capacitive drains.

5. Disconnect the negative battery cable from the post without breaking the connection of the jumper wire.

6. **NOTE:** It is very important that continuity is not broken between the battery and the negative battery cable when connecting the meter. If this happens, the entire procedure must be repeated.

   Connect the tester between the negative battery cable and the post. The meter must be capable of reading milliamps and should have a 10 amp capability.

7. **NOTE:** If the meter settings need to be switched or the test leads need to be moved to another jack, the jumper wire must be reinstalled to avoid breaking continuity.

   Remove the jumper wire.

NOTE: Amperage draw varies from vehicle to vehicle depending on the equipment package. Compare to a similar vehicle for reference.

NOTE: No production vehicle should have more than a 50 mA (0.050 amp) draw.

8. If the draw is found to be excessive, pull the fuses from the battery junction box (BJB) or central junction box (CJB) one at a time and note the current drop. Do not reinstall the fuses until testing is completed.

9. Check the wiring schematic in the wiring diagram for any circuits that run from the battery without passing through the BJB or CJB. Disconnect these circuits if the draw is still excessive.

Battery Electronic Drains Which Shut Off When the Battery Cable is Disconnected Test

1. Repeat the steps of the battery drain testing.

2. Make sure all the doors are closed and all accessories are off. Without starting the engine, turn the key to ON for a moment, then OFF. Wait a few minutes for the illuminated entry lamps to turn off, if equipped.

3. Connect the ammeter and read the amperage draw.

The current reading (current drain) should be less than 50 mA (0.05 amp). If the current drain exceeds 50 mA (0.050 amp) after a few minutes, and if this drain did not show in previous tests, the drain is most likely

caused by an inoperative electronic component. As in previous tests, remove the fuses from the BJB or CJB one at a time to locate the problem circuit.

Generator On-Vehicle Tests

⚠ CAUTION: To prevent damage to the generator, do not make the jumper wire connections except as directed.

⚠ CAUTION: Do not allow any metal object to come in contact with the housing and the internal diode cooling fins with the key in the ON or OFF position. A short circuit may result and burn out the diodes.

NOTE: Battery posts and cable clamps must be clean and tight for accurate meter indications.

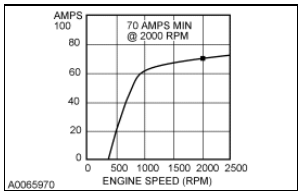
NOTE: Refer to the battery tester manual for complete directions for testing the charging system.

1. Turn off all the lamps and electrical components.
2. Place the transmission in NEUTRAL and apply the parking brake.
3. Carry out the Load Test and No-Load Test according to the following component tests:

Generator On-Vehicle Tests Load Test

1. Switch the tester to the ammeter function.
2. Connect the positive and negative leads of the tester to the corresponding battery terminals.
3. Connect the current probe to the generator B+ output terminal, circuit 30-BA6 (RD).
4. With the engine running at approximately 2,000 rpm, adjust the tester load bank to determine the output of the generator. The generator output should be at least 70 amps.

160 Amp Generator (vehicles built before 12/2003) / 134 Amp Generator (vehicles built after 12/2003)



5. With the engine running, turn the air conditioning (A/C) on, the blower motor on high speed, and the headlamps on high beam.
6. Increase the engine speed to approximately 2,000 rpm. The voltage should increase a minimum of 0.5 volt above the base voltage.
   - If the voltage does not increase as specified, carry out the Generator On-Vehicle Tests No-Load Test in this section.
   - If the voltage increases as specified, the charging system is operating normally.

Generator On-Vehicle Tests No-Load Test

1. Switch the tester to the voltmeter function.
2. Connect the voltmeter positive lead to the generator B+ terminal and the negative lead to ground.
3. Turn all electrical accessories off.
4. With the engine running at approximately 2,000 rpm, check the generator output voltage. The voltage should be between 13 and 15 volts. If not, refer to the pinpoint test or GO to Symptom Chart .

Starter solenoid wire cable nut	6		53

Battery and Cables

Printable View (7 KB)

The battery is a 12-volt direct current source connected in a negative ground system. The battery case is sealed and includes 1 vent hose to release gases to the outside of the vehicle. This vent hose must be attached at all times. New batteries must be of the same vented design. The battery contains a built-in hydrometer with a green dot in the hydrometer eye indicating the battery is OK. A yellow dot, a red dot, or if there is no dot visible, means the battery needs to be charged and tested. The battery has 3 major functions:

- engine cranking power source
- voltage stabilizer for the electrical system
- temporary power when electrical loads exceed the generator output current

Special Tool(s)

ST2442-A	Micro 490 Digital Battery Analyzer 162-00004, or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Battery • Battery mounting	• Battery cables • Battery posts

3. If an obvious cause for a concern is found, correct the cause before proceeding to the next step.
4. If the fault is not visually evident, proceed to the pinpoint test.

Pinpoint Tests

PINPOINT TEST A: BATTERY CONDITION TEST

Test Step	Result / Action to Take
A1 TEST THE BATTERY CONDITION	
NOTE: No battery with a red test-eye should be replaced. The red eye only means the battery is discharged, not necessarily defective. **NOTE:** Failure to fully charge the battery before retesting may cause false readings. • Verify the battery condition using the Battery Analyzer. • **Is the battery OK?**	**Yes** If the meter reads GOOD BATTERY, RETURN the battery to service. REFER to Section 414-00 . If the meter reads GOOD-RECHARGE, CHARGE the battery and RETURN it to service. REFER to Section 414-00 . If the meter reads CHARGE &

	RETEST, fully CHARGE and RETEST the battery. **No** If the meter reads REPLACE BATTERY, INSTALL a new battery. If the meter reads BAD CELL-REPLACE, INSTALL a new battery.

Battery Disconnect

Printable View (13 KB)

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

⚠ WARNING: To avoid accidental deployment and possible injury, the backup power supply must be depleted before repairing or installing any front or side air bag supplemental restraint system (SRS) components and before repairing, installing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches. Failure to follow these procedures may result in personal injury.

Refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in personal injury.

⚠ WARNING: When lifting a battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

NOTE: Because the engine is electronically controlled by the powertrain control module (PCM), some control conditions are maintained by power from the battery. When the battery is disconnected or a new battery is installed, the engine must relearn its idle and fuel trim strategy for optimum driveability and performance. Allow the engine to idle for one minute. The relearning process automatically completes itself as the vehicle is driven. If the engine is not allowed to relearn its idle trim, the idle quality may be adversely affected until the idle trim is eventually relearned. Additionally, to account for customer driving habits and conditions, the automatic transmission must relearn its adaptive strategy. Optimal shifting resumes within a few hundred kilometers (miles) of operation. The clock and radio presets must be reset once the battery is reconnected. Check the front windows for one-touch up operation and the roof opening panel (if equipped) for one-touch close operation. If any have lost this functionality, they must be re-initialized. For window motor initialization, refer to Section 501-11 . For roof opening panel motor initialization, refer to Section 501-17 .

1. Disconnect the battery ground cable.
   - To install, tighten to 7 Nm (62 lb-in).
2. Disconnect the positive battery cable.
   - To install, tighten to 7 Nm (62 lb-in).
3. To reconnect, reverse the disconnect procedure.

Removal and Installation

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

⚠ WARNING: When lifting a plastic-cased battery, excessive pressure on the end walls could cause acid to spew through the vent caps resulting in personal injury, damage to the vehicle or to the battery. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

1. Disconnect the battery. For additional information, refer to Battery Disconnect in this section.
2. Remove the vent hose from the battery.
3. Remove the upper battery hold-down clamp bolt.
   - To install, tighten to 8 Nm (71 lb-in).
4. Remove the lower battery hold-down clamp bolt.
   - To install, tighten to 8 Nm (71 lb-in).
5. Remove the battery hold-down clamp.
6. Remove the battery hold-down clamp wedge.
7. Remove the battery.
8. To install, reverse the removal procedure.

Removal and Installation

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

⚠ WARNING: When lifting a plastic-cased battery, excessive pressure on the end walls could cause acid to spew through the vent caps resulting in personal injury, damage to the vehicle or to the battery. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

All

1. Disconnect the battery. For additional information, refer to Battery Disconnect in this section.

Battery Ground Cable

2. Remove the battery ground cable bolt, 2 battery ground cable locators and the battery ground cable.
   - To install, tighten the bolt to 12 Nm (9 lb-ft).

Positive Battery Cable (rear)

3. Open the rear battery junction box (BJB) cover and remove the rear BJB cable assembly nut and cable end.
   - To install, tighten the nut to 12 Nm (9 lb-ft).
4. Release the positive battery cable from the 2 cable locators on the battery cable assembly conduit.
5. Release the positive battery cable from the 2 cable locators under the package tray.
6. Position the positive battery cable to ease removal from the luggage compartment.
7. From the passenger compartment, remove the rear seat(s) as necessary to obtain access to the positive battery cable.
8. Release the 2 positive battery cable locators from the rear seat area.
9. Remove the positive battery cable from the shield in the rear door opening area.
10. Remove the 3 screws from the positive battery cable shield in the front door opening area.
11. Remove the positive battery cable from the shield in the front door opening area.
12. From under the instrument panel, remove the positive battery cable nut.
    - To install, tighten to 12 Nm (9 lb-ft).
13. Remove the rear positive battery cable assembly.

Positive Battery Cable (front)

14. From the engine compartment, position aside the bulkhead positive battery cable nut cover and remove the bulkhead positive battery cable nut and cable end.
    - To install, tighten the nut to 12 Nm (9 lb-ft).
15. Disconnect the electrical connector.
16. Remove the body ground cable bolt and position aside the body ground cable lead.
    - To install, tighten the bolt to 12 Nm (9 lb-ft).
17. Remove the 2 harness bracket screws.

- To install, tighten to 6 Nm (53 lb-in).

18. Remove the harness bracket.

19. Remove the starter ground cable nut and cable end.
    - To install, tighten the nut to 25 Nm (18 lb-ft).

20. Remove the starter solenoid positive cable nut and cable end.
    - To install, tighten the nut to 12 Nm (9 lb-ft).

21. Remove the starter solenoid wire cable nut and cable end.
    - To install, tighten the nut to 6 Nm (53 lb-in).

22. Remove the generator harness locator.

23. If equipped with the 3.9L engine, remove the generator. For additional information, refer to Section 414-02 .

24. Position aside the generator B+ cover and remove the generator B+ cable nut and cable end.
    - To install, tighten the nut to 7 Nm (62 lb-in) for the 3.0L.
    - To install, tighten the nut to 8 Nm (71 lb-in) for the 3.9L.

25. Remove the engine compartment positive and ground cable assembly.

All

26. To install, reverse the removal procedure.

Printable View (9 KB)

General Specifications

Item	Specification
Generator	
Rating	134 amps (max) @ 6,000 generator rpm, approx. 2,000 engine rpm
Generator pulley ratio	2.70:1 (3.0L) 2.88:1 (3.9L)
Voltage regulator type	Electronic internal with generator

Torque Specifications

Description	Nm	lb-ft	lb-in
Battery cable terminals nuts/bolts	7		62
Generator bracket bolts (3.9L)	48	35	
Generator B+ wire nut (3.0L)	7		62
Generator B+ wire nut (3.9L)	8		71
Generator lower nut (3.9L)	45	33	
Generator mounting bolts (3.0L)	45	33	
Generator upper mounting bolt (3.9L)	21	15	
LH A/C suction line lower bracket bolt	10		89

Generator

Printable View (7 KB)

The generator is belt-driven by the engine accessory drive system. The generator has an internal voltage regulator that is not replaced separately. A new generator and voltage regulator are installed as an assembly.

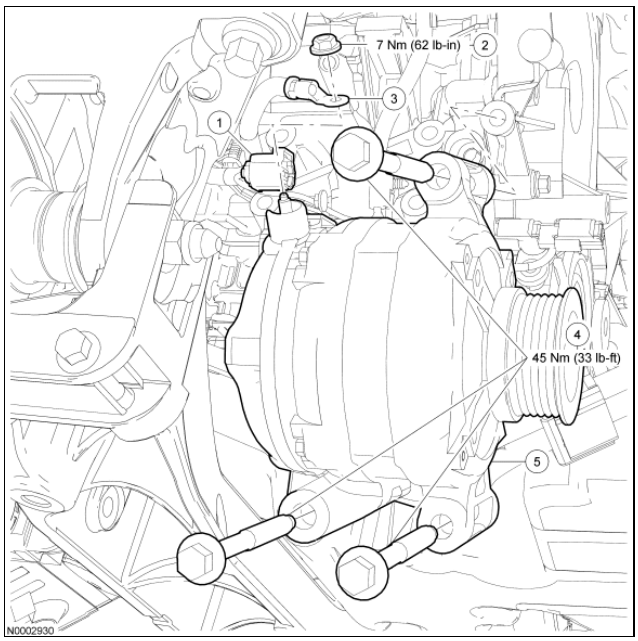
Generator

Printable View (7 KB)

Refer to Section 414-00 .

Generator 3.0L

Printable View (226 KB)



Item	Part Number	Description
1		Generator electrical connector
2	W705790-S301	Generator B+ wire nut
3		Generator B+ wire (part of 14305)
4	W704747-S301	Generator mounting bolts (3 required)
5	10300	Generator

⚠ CAUTION: The generator must be supported by hand after removing the bolts and prior to disconnecting the electrical connector, or damage to the harness may result.

⚠ CAUTION: Care must be taken when removing the generator to prevent damage to the air conditioning (A/C) and cooling lines.

NOTE: The A/C suction line may need to be positioned rearward to ease removal of the generator.

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Rotate the front end accessory drive (FEAD) belt tensioner counterclockwise and position the FEAD belt aside.
3. Remove the front valance panel.
4. Remove the air deflector
5. Disconnect the generator electrical connector.
6. Position the generator B+ protective cover aside and remove the B+ wire nut and cable end.
   - To install, tighten to 7 Nm (62 lb-in).
7. Remove the 3 mounting bolts and the generator.

- To install, tighten to 45 Nm (33 lb-ft).

8. To install, reverse the removal procedure.

Generator 3.9L

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

DM100i

When the audio unit is powered up, audio output signals are sent continuously to the speakers as a fluctuating AC voltage, thus producing sound from the speakers. The steering wheel controls are a multiplexed system that use different resistor values to produce different voltage levels on a single circuit. Each button that is pressed results in a unique voltage signal at the audio unit. This voltage signal is then interpreted by the audio unit as a distinct command. The audio unit is linked to the standard corporate protocol (SCP) communications network and therefore, trouble codes can be obtained with a diagnostic tool. The audio unit also has a self-diagnostic mode that can be entered by pressing preset buttons 3 and 6 simultaneously.

CDX6

When the audio unit is powered up, a wake-up signal is sent to the subwoofer, amplifier, and audio unit amplifiers. Audio output signals are then sent continuously to the subwoofer amplifier and audio unit amplifier. These signals are then amplified and sent to the speakers as a fluctuating AC voltage, thus producing sound from the speakers. The steering wheel controls are a multiplexed system that use different resistor values to produce different voltage levels on a single circuit. Each button that is pressed results in a unique voltage signal at the audio unit. This voltage signal is then interpreted by the audio unit as a distinct command. The audio unit is linked to the SCP communications network and, therefore, trouble codes can be obtained with a diagnostic tool. The audio unit also has a self-diagnostic mode that can be entered by pressing preset buttons 3 and 6 simultaneously.

Navigation

When the audio unit is powered up, a wake-up signal is sent to the subwoofer, amplifier, and audio unit amplifiers. Audio output signals are then sent continuously to the subwoofer amplifier and audio unit amplifier. These signals are then amplified and sent to the speakers as a fluctuating AC voltage, thus producing sound from the speakers. The steering wheel controls are a multiplexed system that use different resistor values to produce different voltage levels on a single circuit. Each button that is pressed results in a unique voltage signal at the audio unit. This voltage signal is then interpreted by the audio unit as a distinct

command.

The navigation audio unit is responsible for generating the displays shown on the video screen display by using video circuits (color generation and display synchronization) between the navigation audio unit and video screen. When an on-screen menu key is pressed on the video screen display, a signal is sent to the navigation audio unit through the controller area network (CAN) circuits. Refreshed data is then sent through the video circuits, and a new screen is displayed corresponding to which key was pressed. Diagnostic communication between the navigation audio unit and the video screen display takes place over the CAN circuits. REFER to Section 419-07 for further information about the navigation system.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Audio unit • Navigation system module • Antenna or antenna cable(s) • Antenna isolator module • Speakers, mounting/speaker cones • Subwoofer amplifier • Center imaging amplifier • High-powered amplifier • Radio ignition interference capacitors, radio frequency interference suppression bond, and radio receiver hood bonding strap	• Central junction box (CJB) fuse(s): ♦ 2 (5A) ♦ 18 (20A) ♦ 27 (10A) • Battery junction box (BJB) fuse(s): ♦ 5 (10A) ♦ 18 (20A) (CDX6) ♦ 18 (30A) (Navigation) • Ignition switch • Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** The audio unit must be in AM, FM1, or FM2 mode to enter diagnostic tool tester diagnostics.

   If the cause is not visually evident, proceed to the Speaker Walk-Around Test and Audio Unit Self-Diagnostic Mode (CDX6 and DM100i), or connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:

- SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), clear the continuous DTCs and carry out self-test diagnostics for the audio unit.

7. If the DTCs retrieved are related to the concern, go to the Audio Unit Diagnostic Trouble Code (DTC) Index or the Navigation System Module Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Speaker Walk-Around Test

NOTE: To enter the speaker walk-around test or the audio unit self-diagnostic mode, the audio unit must be ON and in radio tuner mode (AM/FM).

9. To enter the speaker walk-around test, simultaneously press and hold the audio unit preset buttons 3 and 6 (CDX6 or DM100i) or MAP and DEST (Navigation).

10. The speaker walk-around test interrupts sound from all speakers except for the one displayed on the audio unit. The audio unit allows sound to each speaker for about 1-2 seconds. Each speaker is tested and displayed on the audio unit in the following sequence: RF, LF, LR, RR, Subwoofer I, Subwoofer II. The center imaging speakers are tested last and the display is blank for about 1-2 seconds. These 2 are tested simultaneously.

11. The speaker walk-around test automatically continues and tests for a speaker short. If a speaker short exists, SPKR SHORT is displayed.

Audio Unit Self-Diagnostic Mode CDX6 and DM100i

NOTE: To enter the speaker walk-around test or the audio unit self-diagnostic mode, the audio unit must be on and in radio tuner mode (AM/FM). The audio unit self-diagnostic mode can only be entered while in the speaker walk-around test.

1. To enter the following audio unit self-diagnostic modes, press the preset button desired while in the speaker walk-around test. This aborts the speaker walk-around test and start the selected test.

2. The audio unit self-diagnostic mode has 5 tests available:
    - Preset button 1 = Audio internal/external SELF TEST. If SELF FAIL is displayed, press TUNE > to scroll view the stored DTCs. Refer to the Audio Unit Diagnostic Trouble Code (DTC) Index in this section. If the system is OK, SELF PASS is displayed.
    - Preset button 2 = View/clear continuous diagnostic trouble codes (DTCs). NO DTCs is displayed if no DTCs are retrieved. If DTCs FOUND is displayed, press TUNE > button to view the DTCs retrieved. Refer to the Audio Unit Diagnostic Trouble Code (DTC) Index. To clear all DTCs press the EJECT button. DTCs CLEAR is displayed.
    - **NOTE:** Always document, clear, and carry out the audio unit on-demand self-test again.
    - Preset button 3 = SIGNAL TEST. This test measures the average strength at the current tuner setting.
    - Preset button 4 = Software configuration level. This test queries each audio system controller

for its software configuration level. SOFT LEVELS is displayed upon completion of the query. Press TUNE > to scroll view the software configuration version level.
- Preset button 5 = DISPLAY TEST. This test lights all the audio unit display segments for 5 seconds and then turns all the segments off. When the test is complete, DISPLAY TEST is displayed.
- Preset button 6 = CONFIG LEVELS. This shows the software configuration for the audio unit. Press TUNE > to scroll view the audio unit software configuration.

3. To exit the audio unit self-diagnostic mode, turn the ignition switch or the audio unit OFF.

4. If the concern remains and the fault is not detected, GO to Symptom Chart .

Audio Unit Self-Diagnostic Mode Software Configuration Display

Controller	Description	Audio Unit Display Example
Main	Main Micro Software Version	MAIN ##.##.##

CDSP	CDSP Micro Software Version	CDSP ##.##.##
CDDJ	CDDJ Software Version	CDDJ ##.##.##
CD Changer	CDR Software Version	CD ##.##.##
RICP	RICP Software Version	RICP ##.##.##

Audio Unit Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	Audio Unit	DOCUMENT and CLEAR the DTCs. CARRY OUT the Audio Unit On-Demand Self-Test. If DTC B1342 is retrieved again, REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.
B2103	Antenna Not Connected	Audio Unit	Go To Pinpoint Test C .
B2401	Audio Tape Deck Mechanism Fault	Audio Unit	Not applicable for CDX6 or Navigation.
B2404	Audio Steering Wheel Switch Circuit Fault	Audio Unit	Go To Pinpoint Test H .
B2405	Audio Single-Disc CD Player Thermal Shutdown Fault	Audio Unit	Not applicable for CDX6 or Navigation.
B2406	Audio Single-Disc CD Player Internal Fault	Audio Unit	Not applicable for CDX6 or Navigation.
B2477	Module Configuration Fault	Audio Unit	REFER to Section 418-01 .
B2913	Subwoofer Not Connected	Audio Unit	Go To Pinpoint Test F .

U2008	Audio Phone is Not Responding	Audio Unit	Not applicable.
U2014	Audio Subwoofer Unit is Not Responding	Audio Unit	Not applicable for CDX6.
U2020	Center Image Amplifier is Not Responding	Audio Unit	Not applicable for CDX6.
All other DTCs		Audio Unit	REFER to Section 419-10 .

Navigation System Module Diagnostic Trouble Code (DTC) Index

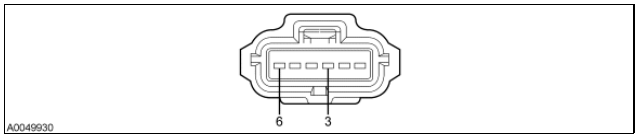
DTC	Description	Source	Action
B2103	Antenna Not Connected	Navigation System Module	Go To Pinpoint Test C .
B2208	Navigation System Module to Audio Unit Communication Error	Navigation System Module	REFER to Section 419-07 .
B2403	Audio CDDJ Internal Fault	Navigation System Module	REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.
B2404	Audio Steering Wheel Switch Circuit Fault	Navigation System Module	Go To Pinpoint Test H .
B2858	Audio Unit Is Defective	Navigation System Module	REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.
B2913	Subwoofer Not Connected	Navigation System Module	Go To Pinpoint Test G .
C1192	Vehicle Speed Circuit Failure.	Navigation System Module	If the map icon functions correctly, REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. If the map icon does not function correctly, REFER to Section 419-07 for further information.
U1016	Vehicle Speed Signal Failure.	Navigation System Module	If the map icon functions correctly, INSTALL a new audio unit. REFER to Section 415-01 . TEST the system for normal operation. If the map icon does not function correctly, REFER to Section 419-07 for further information.
All other DTCs		Navigation System Module	REFER to Section 419-07 .

For a complete master list of navigation system module DTCs, REFER to Section 419-07 .

Symptom Chart

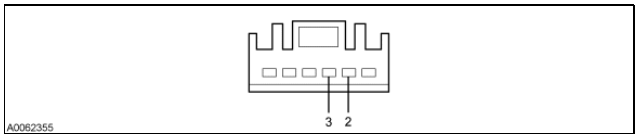
Symptom Chart
Connector Circuit Reference

Horn Switch Connector



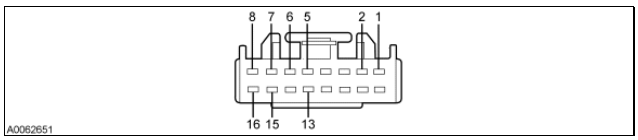
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3		Less than 5 ohms between the steering wheel control switch and the horn switch. Greater than 10,000 ohms between the steering wheel control switch and ground.
6		Less than 5 ohms between the steering wheel control switch and the horn switch. Greater than 10,000 ohms between the steering wheel control switch and ground.

Clockspring C218b



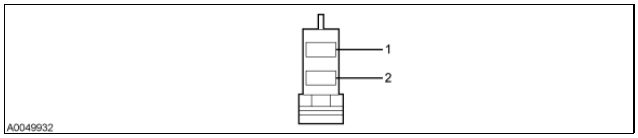
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	8-MD26 (WH/BK) auxiliary audio controls, steering wheel, reference voltage.	Greater than 10 volts between clockspring and ground with the key in the ON position and the audio unit on. Less than 5 ohms between the clock spring and the audio unit with the audio unit disconnected.
3	31S-PG1 (BK/BU) steering wheel assembly, switch, common.	Less than 5 ohms between steering wheel switch and the audio unit.

Center Imaging Amplifier C225



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	1-MD12 (WH) center imaging audio signal	Less than 5 ohms between the center imaging amplifier and the audio unit. Greater than 10,000 ohms between the center imaging amplifier and ground.
2	2-MD12 (GY) center imaging audio return	Less than 5 ohms between the center imaging amplifier and the audio unit. Greater than 10,000 ohms between the center imaging amplifier and ground.
5	8-MD31 (WH/GN) RH center imaging speaker signal	Less than 5 ohms between the center imaging amplifier and the RH center imaging speaker. Greater than 10,000 ohms between the center imaging amplifier and ground.
6	10-MD31 (GY/OG) RH center imaging speaker return	Less than 5 ohms between the center imaging amplifier and the RH center imaging speaker. Greater than 10,000 ohms between the center imaging amplifier and ground.
7	8-MD30 (WH/BU) LH center imaging speaker return	Less than 5 ohms between the center imaging amplifier and the LH center imaging speaker. Greater than 10,000 ohms between the center imaging amplifier and ground.
8	10-MD30 (GY/VT) LH center imaging speaker signal	Less than 5 ohms between the center imaging amplifier and the LH center imaging speaker. Greater than 10,000 ohms between the center imaging amplifier and ground.
13	7-MD12 (YE) center imaging amplifier enable	Less than 5 ohms between the center imaging amplifier and the audio unit. Greater than 10,000 ohms between the center imaging amplifier and ground.
15	31-MD12 (BK/YE) ground circuit	Less than 5 ohms between the center imaging amplifier and ground.
16	29-MD12 (OG/YE) B+ battery feed	Greater than 10 volts between the center imaging amplifier and ground.

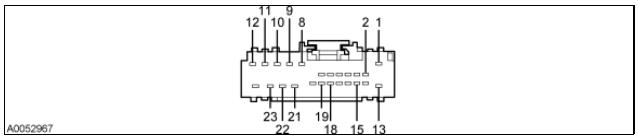
Center Imaging Speaker LH C230, RH C231



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C230)	8-MD30 (WH/BU) LH center imaging speaker output	Less than 5 ohms between the LH center imaging speaker and the center imaging amplifier. Greater than 10,000 ohms between the LH center imaging speaker and ground.
2 (C230)	10-MD30 (GY/VT) LH center imaging speaker return	Less than 5 ohms between the LH center imaging speaker and the center imaging amplifier. Greater than 10,000 ohms between the LH center imaging speaker and ground.
1 (C231)	8-MD31 (WH/GN) RH center imaging speaker output	Less than 5 ohms between the RH center imaging speaker and the center imaging amplifier. Greater than 10,000 ohms between the RH center imaging speaker and ground.
2 (C231)	10-MD31 (GY/OG) RH center	Less than 5 ohms between the RH center imaging speaker

	imaging speaker return	and the center imaging amplifier. Greater than 10,000 ohms between the RH center imaging speaker and ground.

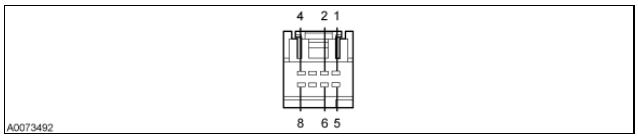
Audio Unit C290b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29-MD15 (OG/BK) B+ battery feed, audio unit memory	Greater than 10 volts between the audio unit and ground.
2	75-MD15 (YE/GN) B+ battery feed with the ignition switch in the ON and ACCESSORY positions	Greater than 10 volts between the audio unit and ground with the ignition switch in the ON or ACCESSORY positions.
8	8-MD10 (WH/BK) LH front speaker output	Less than 5 ohms between the audio unit and the LH front speaker. Greater than 10,000 ohms between the audio unit and ground.
9	8-MD11 (WH/VT) LH rear speaker output	Less than 5 ohms between the audio unit and the LH rear speaker. Greater than 10,000 ohms between the audio unit and ground.
10	8-MD18 (WH) RH rear speaker output	Less than 5 ohms between the audio unit and the RH rear speaker. Greater than 10,000 ohms between the audio unit and ground.
11	8-MD17 (WH/RD) RH front speaker output	Less than 5 ohms between the audio unit and the RH front speaker. Greater than 10,000 ohms between the audio unit and ground.
12	10-MD17 (GY/RD) RH front speaker return	Less than 5 ohms between the audio unit and the RH front speaker. Greater than 10,000 ohms between the audio unit and ground.
13 (DM10I)	31-MD15 (BK/GN) audio unit ground	Less than 5 ohms between the audio unit and ground.
13 (CDX6)	31-MD15A (BK/GN) audio unit ground	Less than 5 ohms between the audio unit and ground.
15	50-MD15 (GY/OG) B+ power feed START position only	Greater than 10 volts with the ignition switch in the START position.
18	8-MD26 (WH/BK) steering wheel audio controls reference signal	Less than 5 ohms between the audio unit and the steering wheel control switch. Greater than 10,000 ohms between the audio unit and ground.
19	31S-MD26 (BK/RD) steering wheel audio controls reference signal	Less than 5 ohms between the audio unit and the steering wheel control switch. Greater than 10,000 ohms between the audio unit and ground.
21	10-MD10 (GY/BK) LH front speaker return	Less than 5 ohms between the audio unit and the LH front speaker. Greater than 10,000 ohms between the audio unit and ground.

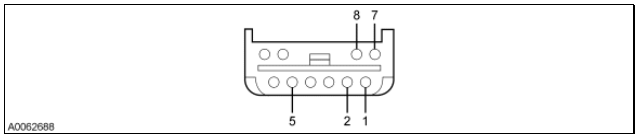
22	10-MD11 (GY/WH) LH rear speaker return	Less than 5 ohms between the audio unit and the LH rear speaker. Greater than 10,000 ohms between the audio unit and ground.
23	10-MD18 (GY) RH rear speaker return	Less than 5 ohms between the audio unit and the RH rear speaker. Greater than 10,000 ohms between the audio unit and ground.

Audio Unit C290d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	1-MD19 (WH/RD) subwoofer audio output	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
2	2-MD19 (GY/RD) subwoofer audio output	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
4	7-MD19 (YE/RD) subwoofer enable/clip detection	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
5	1-MD12 (WH) center imaging audio output	Less than 5 ohms between the audio unit and the center imaging amplifier. Greater than 10,000 ohms between the audio unit and ground.
6	2-MD12 (GY) center imaging audio output	Less than 5 ohms between the audio unit and the center imaging amplifier. Greater than 10,000 ohms between the audio unit and ground.
8	7-MD12 (YE) center imaging amplifier enable/clip detection	Less than 5 ohms between the audio unit and the center imaging amplifier. Greater than 10,000 ohms between the audio unit and ground.

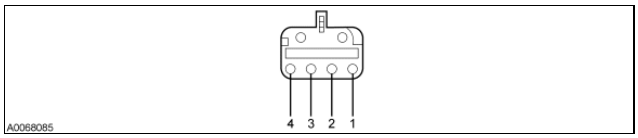
Subwoofer Amplifier C466a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1		

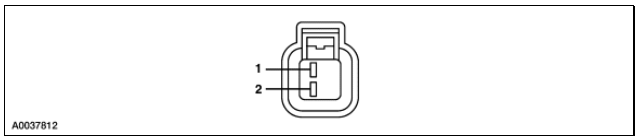
	7-MD19 (YE/RD) subwoofer enable/clip detection	5 volts with audio unit ON. Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
2 (CDX6)	31-MD19 (BK/BU) subwoofer amplifier ground	Less than 5 ohms between the subwoofer amplifier and ground.
2 (Navigation)	31-MD19A (BK) subwoofer amplifier ground	Less than 5 ohms between the subwoofer amplifier and ground.
5 (CDX6)	30-MD19A (RD/BU) B+ constant battery feed	Greater than 10 volts between the subwoofer amplifier and ground. Less than 5 ohms between the subwoofer amplifier and the CJB.
5 (Navigation)	30-MD19A (RD/YE) B+ constant battery feed	Greater than 10 volts between the subwoofer amplifier and ground. Less than 5 ohms between the subwoofer amplifier and the CJB.
7	1-MD19 (WH/RD) subwoofer audio output	Less than 5 ohms between the subwoofer amplifier and the audio unit. Greater than 10,000 ohms between the subwoofer and ground.
8	2-MD19 (GY/RD) subwoofer audio return	Less than 5 ohms between the subwoofer amplifier and the audio unit. Greater than 10,000 ohms between the subwoofer and ground.

Subwoofer Amplifier C466b



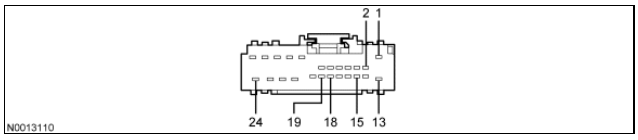
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-MD21 (WH/BU) RH subwoofer speaker audio output	Less than 5 ohms between the RH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the RH subwoofer speaker and ground.
2	10-MD21 (GY/VT) RH subwoofer speaker audio return	Less than 5 ohms between the RH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the RH subwoofer speaker and ground.
3	8-MD22 (WH/GN) LH subwoofer speaker audio output	Less than 5 ohms between the LH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the LH subwoofer speaker and ground.
4	10-MD22 (GY/OG) LH subwoofer speaker audio return	Less than 5 ohms between the LH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the LH subwoofer speaker and ground.

Speaker C523, C612, C702, C802



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C523)	8-MD10 (WH/BK) LH front speaker audio output	Less than 5 ohms between the LH front speaker and the audio unit. Greater than 10,000 ohms between the LH front speaker and ground.
2 (C523)	10-MD10 (GY/BK) LH front speaker audio return	Less than 5 ohms between the LH front speaker and the audio unit. Greater than 10,000 ohms between the LH front speaker and ground.
1 (C612)	8-MD17 (WH/RD) RH front speaker audio output	Less than 5 ohms between the RH front speaker and the audio unit. Greater than 10,000 ohms between the RH front speaker and ground.
2 (C612)	10-MD17 (GY/RD) RH front speaker audio return	Less than 5 ohms between the RH front speaker and the audio unit. Greater than 10,000 ohms between the RH front speaker and ground.
1 (C702)	8-MD11 (WH/VT) LH rear speaker audio output	Less than 5 ohms between the LH rear speaker and the audio unit. Greater than 10,000 ohms between the LH rear speaker and ground.
2 (C702)	10-MD11 (GY/WH) LH rear speaker audio return	Less than 5 ohms between the LH rear speaker and the audio unit. Greater than 10,000 ohms between the LH rear speaker and ground.
1 (C802)	8-MD18 (WH) RH rear speaker audio output	Less than 5 ohms between the RH rear speaker and the audio unit. Greater than 10,000 ohms between the RH rear speaker and ground.
2 (C802)	10-MD18 (GY) RH rear speaker audio return	Less than 5 ohms between the RH rear speaker and the audio unit. Greater than 10,000 ohms between the RH rear speaker and ground.

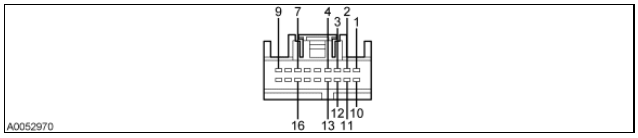
Navigation Audio Unit C2253a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29-MD15 (OG/BK) B+ battery feed, audio unit memory	Greater than 10 volts between the audio unit and ground.
2	10-MD15 (GY/OG) delayed accessory power	Greater than 10 volts between the audio unit and ground with the ignition switch in the RUN or ACCESSORY position.

13	31-MD15B (BK/GN) audio unit ground	Less than 5 ohms between the audio unit and ground.
15	50-MD15 (GY/OG) B+ power feed START position only	Greater than 10 volts with the ignition switch in the START position.
18	8-MD26 (WH/BK) steering wheel audio controls reference signal	Less than 5 ohms between the audio unit and the clockspring. Greater than 10,000 ohms between the audio unit and ground.
19	31S-MD26 (BK/RD) steering wheel audio controls reference signal	Less than 5 ohms between the audio unit and the clockspring. Greater than 10,000 ohms between the audio unit and ground.
24	31-MD15A (BK/GN) audio unit ground	Less than 5 ohms between the audio unit and ground.

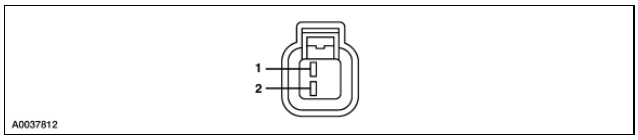
Navigation Audio Unit C2253d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-MD10A (WH/BK) LH front speaker output	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
2	8-MD17A (WH/RD) RH front speaker output	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
3	8-MD11A (WH/VT) LH rear speaker output	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
4	8-MD18A (WH) RH rear speaker output	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
7	1-MD19 (WH/RD) subwoofer audio output	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
9	7-MD27 (YE/VT) subwoofer enable/clip detection	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.
10	10-MD10A (GY/BK) LH front speaker return	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
11	10-MD17A (GY/RD) RH front speaker return	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
12	10-MD11A (GY/WH) LH rear	Less than 5 ohms between the audio unit and the speaker.

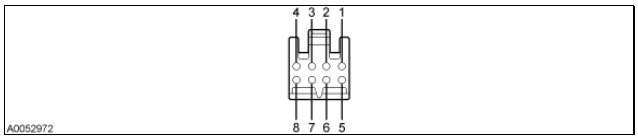
	speaker return	Greater than 10,000 ohms between the audio unit and ground.
13	10-MD18A (GY) RH rear speaker return	Less than 5 ohms between the audio unit and the speaker. Greater than 10,000 ohms between the audio unit and ground.
16	2-MD19 (GY/RD) subwoofer audio return	Less than 5 ohms between the audio unit and the subwoofer amplifier. Greater than 10,000 ohms between the audio unit and ground.

Subwoofer Speaker LH C4068, RH C4069



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C4068)	8-MD22 (WH/GN) LH subwoofer speaker audio output	Less than 5 ohms between the LH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the LH subwoofer speaker and ground.
2 (C4068)	10-MD22 (GY/OG) LH subwoofer speaker audio return	Less than 5 ohms between the LH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the LH subwoofer speaker and ground.
1 (C4069)	8-MD21 (WH/BU) RH subwoofer speaker audio output	Less than 5 ohms between the RH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the RH subwoofer speaker and ground.
2 (C4069)	10-MD21 (GY/VT) RH subwoofer speaker audio return	Less than 5 ohms between the RH subwoofer speaker and the subwoofer amplifier. Greater than 10,000 ohms between the RH subwoofer speaker and ground.

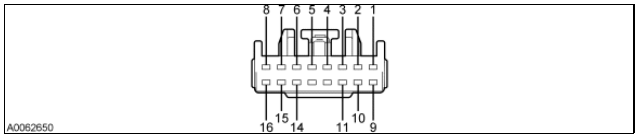
Audio Amplifier C4208a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	10-MD18A (GY) RH rear speaker return	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier audio unit and ground.
2	10-MD17A (GY/RD) RH front speaker return	Less than 5 ohms between the audio unit and the audio amplifier. Greater than

		10,000 ohms between the audio amplifier and ground.
3	10-MD11A (GY/WH) LH rear speaker return	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.
4	10-MD10A (GY/BK) LH front speaker return	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.
5	8-MD18A (WH) RH rear speaker output	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.
6	8-MD17A (WH/RD) RH front speaker output	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.
7	8-MD11A (WH/VT) LH rear speaker output	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.
8	8-MD10A (WH/BK) LH front speaker output	Less than 5 ohms between the audio unit and the audio amplifier. Greater than 10,000 ohms between the audio amplifier and ground.

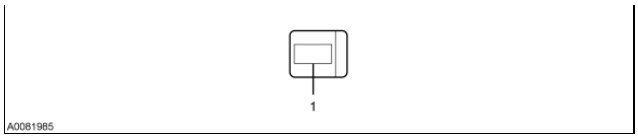
Audio Amplifier C4208b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-MD18 (WH) RH rear speaker output	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
2	10-MD18 (GY) RH rear speaker return	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
3	8-MD17 (WH/RD) RH front speaker output	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
4	10-MD17 (GY/RD) RH front speaker return	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.

5	8-MD11 (WH/VT) LH rear speaker output	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
6	10-MD11 (GY/WH) LH rear speaker return	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
7	8-MD10 (WH/BK) LH front speaker output	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
8	10-MD10 (GY/BK) LH front speaker return	Less than 5 ohms between the audio amplifier and the speaker. Greater than 10,000 ohms between the audio amplifier and ground.
9	31-MD27A (BK/WH) audio amplifier ground	Less than 5 ohms between the audio amplifier and ground.
10	31-MD27B (BK/WH) audio amplifier ground	Less than 5 ohms between the audio amplifier and ground.
11	31-MD27C (BK/WH) audio amplifier ground	Less than 5 ohms between the audio amplifier and ground.
14	30-MD27A (RD/WH) B+ battery feed	Greater than 10 volts between the audio amplifier and ground.
15	30-MD27B (RD/WH) B+ battery feed	Greater than 10 volts between the audio amplifier and ground.
16	30-MD27C (RD/WH) B+ battery feed	Greater than 10 volts between the audio amplifier and ground.

Antenna Isolator Module C9021



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-MD7 (OG/BU) B+ battery feed with the ignition switch in the ON and ACC positions	Greater than 10 volts between the antenna isolator module and ground.

Pinpoint Test A: No communication with the audio unit CDX6 and DM100i only

Normal Operation

When the ignition switch is in the ON position and the audio unit is turned on, communication is possible between the diagnostic tool and the audio unit. The diagnostic tool retrieves codes and data.

Possible Causes

- central junction box (CJB) fuse(s):

- ♦ 18 (20A)
- ♦ 27 (10)

- battery junction box (BJB) fuse(s):
  - ♦ 5 (10A)
  - ♦ 18 (20A)
- standard corporate protocol (SCP) communications network
- circuit 29-MD15 (OG/BK) open or short to ground
- circuit 29-MD1 (OG/YE) open or short to ground (CDX6)
- circuit 31-MD15 (BK/GN) open (DM100i)
- circuit 31-MD15A (BK/GN) open (CDX6)
- circuit 75-MD15 (YE/GN) open
- audio unit

PINPOINT TEST A: NO COMMUNICATION WITH THE AUDIO UNIT CDX6 AND DM100i ONLY

Test Step	Result / Action to Take
A1 CHECK CIRCUITS 29-MD15 (OG/BK) AND 75-MD15 (YE/GN) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Audio Unit C290b. • Key in ON position. • Measure the voltage between the audio unit C290b-1, circuit 29-MD15 (OG/BK), harness side and ground; and between the audio unit C290b-2, circuit 75-MD15 (YE/GN), harness side and ground.  A0073493 • **Are the voltages greater than 10 volts?**	**Yes** GO to A2 . **No** REPAIR the circuit in question. REPEAT the data link diagnostic test.
A2 CHECK CIRCUIT 31-MD15 (BK/GN) OR 31-MD15A (BK/GN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the audio unit C290b-13, circuit 31-MD15A (BK/GN) (CDX6) or circuit 31-MD15 (BK/GN)(DM100i), harness side and ground.  A0057104 • **Is the resistance less than 5 ohms?**	**Yes** REFER to Section 418-00 to continue network diagnosis. **No** REPAIR the circuit. REPEAT the data link diagnostic test.

Pinpoint Test B: The Audio Unit is Inoperative/Does Not Operate Correctly

Normal Operation

The audio unit is powered up when the ignition switch is in the ON or ACC position. The audio unit provides audio signals to the speakers, subwoofer amplifier, and center imaging or audio amplifier (if equipped), producing sound.

Possible Causes

- central junction box (CJB) fuse(s):
  - 2 (5A)
  - 18 (20A)
  - 27 (10A) (CDX6, DM100i)
- circuit 10-MD15 (GY/OG) open or short to ground (Navigation)
- circuit 29-MD15 (OG/BK) open or short to ground
- circuit 31-MD15 (BK/GN) open (DM100i)
- circuit 31-MD15A (BK/GN) open (CDX6 and Navigation)
- circuit 31-MD15B (BK/GN) open (Navigation)
- circuit 50-MD15 (GY/OG) short to voltage
- circuit 75-MD15 (YE/GN) open or short to ground (CDX6 and DM100i)
- audio unit

PINPOINT TEST B: THE AUDIO UNIT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
B1 CHECK THE OPERATION OF THE AUDIO UNIT	
• Key in ON position. • Turn on the audio unit. • **Is the audio unit display illuminated?**	**Yes** GO to B2 . **No** For Navigation GO to B4 . All others, GO to B5 .
B2 CHECK FOR SOUND COMING FROM THE SPEAKERS	
• Carry out the speaker walk-around test. • Check for sound from the speakers. • **Is sound coming from the speakers?**	**Yes** GO to B3 . **No** For Navigation, Go To Pinpoint Test E . All others, Go To Pinpoint Test D .
B3 CARRY OUT THE CONTROLS AND FEATURES TEST	
• Verify that all the audio system controls and features operate correctly; refer to the owner literature. • **Do all the controls and features operate correctly?**	**Yes** The system is OK. **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

B4 VERIFY THE OPERATION OF THE POWER WINDOWS	
• Verify that all the power windows and the roof opening panel operate correctly. Refer to the owner literature. • **Do all the power windows and roof opening panel operate correctly?**	**Yes** GO to B5 . **No** For the power windows, REFER to Section 501-11 . For the roof opening panel, REFER to Section 501-17 .
B5 CHECK CIRCUITS 29-MD15 (OG/BK), 75-MD15 (YE/GN), OR 10-MD15 (GY/OG) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Audio Unit C290b (DM100i) (CDX6). • Disconnect: Audio Unit C2253a (Navigation). • Key in ON position. • Measure the voltage between the audio unit and ground as follows: **Audio Unit / Connector-Pin / Circuit** CDX6 / C290b-1 / 29-MD15 (OG/BK) CDX6 / C290b-2 / 75-MD15 (YE/GN) DM100i / C290b-1 / 29-MD15 (OG/BK) DM100i / C290b-2 / 75-MD15 (YE/GN) Navigation / C2253a-1 / 29-MD15 (OG/BK) Navigation / C2253a-2 / 10-MD15 (GY/OG)  A0065069 • **Are the voltages greater than 10 volts?**	**Yes** GO to B6 . **No** REPAIR the circuit in question. TEST the system for normal operation.
B6 CHECK CIRCUITS 31-MD15 (BK/GN), 31-MD15A (BK/GN), OR 31-MD15B (BK/GN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the audio unit C290b-13, circuit 31-MD15A (BK/GN) (CDX6) or circuit 31-MD15 (BK/GN) (DM100i), harness side and ground.  A0057104	**Yes** GO to B7 . **No** REPAIR the circuit in question. TEST the system for normal operation.

• Measure the resistance between the audio unit (Navigation) C2253a-13, circuit 31-MD15B (BK/GN), harness side and ground; and between the audio unit C2253a-24, circuit 31-MD15A (BK/GN), harness side and ground.  A0057114 • **Are the resistances less than 5 ohms?**	
B7 CHECK CIRCUIT 50-MD15 (GY/OG) FOR A SHORT TO VOLTAGE WITH THE IGNITION SWITCH IN ACC THE POSITION	
• Key in ACCESSORY position. • Measure the voltage between audio unit (CDX6) (DM100i) C290b-15, or Navigation C2253a-15, circuit 50-MD15 (GY/OG), harness side and ground.  A0074490 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

Pinpoint Test C: Poor Reception

Normal Operation

The radio suppression equipment reduces engine ignition and electrical systems interference transmitted through the speakers.

Possible Causes

- antenna
- antenna connections
- noise suppression equipment
- antenna isolator module
- audio unit

NOTE: It is normal for an audible popping sound to be heard when turning the defroster on or off. Advise the customer of the condition.

PINPOINT TEST C: POOR RECEPTION

Test Step	Result / Action to Take

C1 CHECK THE AUDIO UNIT SIGNAL RECEPTION	
• Check the audio unit signal reception with the engine running and with the engine off. • **Is the audio unit signal reception noisy only with the engine running?**	**Yes** GO to C2 . **No** GO to C8 .
C2 CHECK THE SUPPRESSION EQUIPMENT	
• Check all required suppression equipment, the radio frequency interference suppression bond, and the hood bonding strap for security, cleanliness, and metal-to-metal contact. • **Are the contacts clean, secure, and in metal-to-metal contact?**	**Yes** GO to C3 . **No** INSTALL new radio frequency interference suppression bonds or related equipment. CLEAN or SECURE the connections as necessary. TEST the system for normal operation.
C3 CHECK THE CAPACITOR MOUNTING AND CONNECTING CIRCUITS	
NOTE: The capacitor mounting points are used to complete the electrical circuit and must be mounted securely to clean surfaces. • Check the mounting and connecting circuits of the radio ignition interference capacitor(s) for security, cleanliness, and metal-to-metal contact. • **Are the contacts clean, secure, and in metal-to-metal contact?**	**Yes** GO to C4 . **No** CLEAN or SECURE the connections as necessary. TEST the system for normal operation.
C4 CHECK THE RADIO IGNITION INTERFERENCE CAPACITOR(S) AND THE GENERATOR	
• Check the operation of the radio ignition interference capacitor(s) by installing known good component(s). • Check the generator by disconnecting the wiring harness from the voltage regulator. • Key in START position. • Check the operation of the audio unit. • **Is the noise eliminated?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to C5 .
C5 CHECK THE IGNITION CIRCUITS	
• Key in OFF position.	**Yes** GO to C6 .

• Check the ignition circuits for correct routing, grounding, and security of connections. • **Are the circuits OK?**	**No** REPAIR the circuit as necessary. TEST the system for normal operation.
C6 CHECK THE IGNITION SYSTEM	
• Test the ignition system. Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. • **Is the ignition system OK?**	**Yes** GO to C7 . **No** REPAIR the ignition system. REFER to Section 303-07A (3.0L 4V) or Section 303-07B (3.9L). TEST the system for normal operation.
C7 SUBSTITUTE THE AUDIO UNIT	
• Key in OFF position. • Substitute a known good audio unit. • Key in START position. • Check the operation of the audio unit. • **Is the noise eliminated?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REINSTALL the original audio unit. USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary. TEST the system for normal operation.
C8 CHECK THE ANTENNA FOR DAMAGE	
• Key in OFF position. • Disconnect: Antenna Lead Terminal. • Measure the resistance between the antenna cable lead terminal and the end of the antenna grid wire. • **Is the resistance less than 8 ohms?**	**Yes** GO to C9 . **No** REPAIR the antenna grid. REFER to Section 501-11 . TEST the system for normal operation.
C9 CHECK CIRCUIT 29S-MD7 (OG/BU) FOR VOLTAGE	
• Disconnect: Antenna Isolator Module C9021. • Key in ON position. • Measure the voltage between the antenna isolator module C9021-1, circuit 29S-MD7 (OG/BU), harness side and ground.  	**Yes** GO to C10 . **No** REPAIR the circuit. TEST the system for normal operation.

• **Is the voltage greater than 10 volts?**	
C10 SUBSTITUTE THE ANTENNA ISOLATOR MODULE	
• Key in OFF position. • Substitute a known good antenna isolator module. • Key in START position. • Check the operation of the audio unit. • **Is the noise eliminated?**	**Yes** INSTALL a new antenna isolator module. REFER to Section 415-02 . TEST the system for normal operation. **No** GO to C11 .
C11 SUBSTITUTE THE ANTENNA EXTENSION CABLE(S)	
• Key in OFF position. • Substitute a known good antenna cable(s) between the antenna isolator module and the audio unit. • Key in START position. • Check the operation of the audio unit. • **Is the noise eliminated?**	**Yes** INSTALL a new antenna cable. TEST the system for normal operation. **No** INSTALL the original antenna cable. REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

Pinpoint Test D: Poor Quality/Distorted Sound or No Sound From One Or More Speakers (Not All Speakers) Except Navigation Audio Unit

Normal Operation

The audio unit directs the audio signals to the door speakers through separate positive and negative circuits. The signals are then amplified by the center imaging amplifier and sent to both of the center imaging speakers. The audio unit provides internal circuit protection for shorts to ground, shorts to B+ battery, or shorts between any output circuits.

Possible Causes

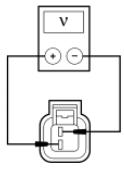
- central junction box (CJB) fuse 18 (20A)
- center imaging amplifier
- speakers
- audio unit
- circuit 1-MD12 (WH) open or short to ground
- circuit 2-MD12 (GY) open or short to ground
- circuit 7-MD12 (YE) open
- circuit 8-MD10 (WH/BK) open or short to ground
- circuit 8-MD11 (WH/VT) open or short to ground
- circuit 8-MD17 (WH/RD) open or short to ground
- circuit 8-MD18 (WH) open or short to ground
- circuit 8-MD30 (WH/BU) open or short to ground
- circuit 8-MD31 (WH/GN) open or short to ground
- circuit 10-MD10 (GY/BK) open or short to ground
- circuit 10-MD11 (GY/WH) open or short to ground
- circuit 10-MD17 (GY/RD) open or short to ground
- circuit 10-MD18 (GY) open or short to ground
- circuit 10-MD30 (GY/VT) open or short to ground
- circuit 10-MD31 (GY/OG) open or short to ground

- circuit 29-MD12 (OG/RD) open or short to ground
- circuit 31-MD12 (BK/YE) open

PINPOINT TEST D: POOR QUALITY/DISTORTED SOUND OR NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) EXCEPT NAVIGATION AUDIO UNIT

Test Step	Result / Action to Take
D1 CHECK FOR SOUND	
• Key in ON position. • Turn on the audio unit. • Carry out the speaker walk-around test. • **Do all speakers have poor quality/distorted sound or no sound?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** If the concern is with the subwoofer speakers, Go To Pinpoint Test F . If the concern is with a center imaging speaker(s) GO to D4 . For all others GO to D2 .
D2 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE SPEAKER WITH POOR QUALITY/DISTORTED SOUND OR NO SOUND	
• Key in OFF position. • Disconnect: Suspect Speaker(s). • Key in ON position. • Turn on the audio unit. • Measure the voltage between pin 1, harness side and pin 2, harness side of the suspect speaker as follows:	**Yes** INSTALL a new speaker. REFER to Section 415-03 . TEST the system for normal operation. **No** GO to D3 .

Speaker	Pin 1 Circuit	Pin 2 Circuit
LH front C523	8-MD10 (WH/BK)	10-MD10 (GY/BK)
RH front C612	8-MD17 (WH/RD)	10-MD17 (GY/RD)
LH rear C702	8-MD11 (WH/VT)	10-MD11 (GY/WH)
RH rear C802	8-MD18 (WH)	10-MD18 (GY)



- **Is there a fluctuating AC voltage?**

D3 CHECK CIRCUITS 8-MD10 (WH/BK), 8-MD11 (WH/VT), 8-MD17 (WH/RD), 8-MD18 (WH), 10-MD10 (GY/BK), 10-MD11 (GY/WH), 10-MD17 (GY/RD), AND 10-MD18 (GY) FOR AN OPEN OR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: Audio Unit C290b.
- Disconnect: Suspect Speaker(s).
- Measure the resistance between the suspect speaker(s), harness side and the audio unit, harness side; and between the suspect speaker(s), harness side and ground as follows:

Location	Speaker Connector-Pin	Audio Unit Connector-Pin	Circuit
LH front	C523-1	C290b-8	8-MD10 (WH/BK)
LH front	C523-2	C290b-21	10-MD10 (GY/BK)
RH front	C612-1	C290b-11	8-MD17 (WH/RD)
RH front	C612-2	C290b-12	10-MD17 (GY/RD)
LH rear	C702-1	C290b-9	8-MD11 (WH/VT)
LH rear	C702-2	C290b-22	10-MD11 (GY/WH)
RH rear	C802-1	C290b-10	8-MD18 (WH)
RH rear	C802-2	C290b-23	10-MD18 (GY)

- **Are the resistance(s) less than 5 ohms between the suspect speaker and the audio unit, and greater than 10,000 ohms between the suspect speaker and ground?**

Yes
REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

No
REPAIR the circuit in question. TEST the system for normal operation.

D4 CHECK THE CENTER IMAGING SPEAKER OPERATION

- Key in ON position.
- Turn the audio unit on.
- Check the operation of the center imaging speakers.
- **Are both center imaging speakers inoperative?**

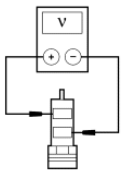
Yes
GO to D5 .

No
GO to D11 .

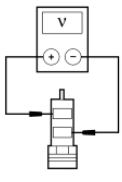
D5 CHECK CIRCUIT 7-MD12 (YE) FOR VOLTAGE

• Key in OFF position. • Disconnect: Center Imaging Amplifier C225. • Key in ON position. • Turn on the audio unit. • Measure the voltage between the center imaging amplifier C225-13, circuit 7-MD12 (YE), harness side and ground.  A0057117 • **Is the voltage greater than 10 volts?**	**Yes** GO to D6 . **No** GO to D10 .
D6 CHECK CIRCUIT 29-MD12 (OG/YE) FOR VOLTAGE	
• Measure the voltage between the center imaging amplifier C225-16, circuit 29-MD12 (OG/YE), harness side and ground.  A0057118 • **Is the voltage greater than 10 volts?**	**Yes** GO to D7 . **No** REPAIR the circuit. TEST the system for normal operation.
D7 CHECK CIRCUIT 31-MD12 (BK/YE) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the center imaging amplifier C225-15, circuit 31-MD12 (BK/YE), harness side and ground.  A0057119 • **Is the resistance less than 5 ohms?**	**Yes** GO to D8 . **No** REPAIR the circuit. TEST the system for normal operation.
D8 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE CENTER IMAGE AMPLIFIER	
• Measure the voltage between the center imaging amplifier C225-1, circuit 1-MD12 (WH), harness side and the center imaging amplifier C225-2, circuit 2-MD12 (GY), harness side.  A0065070	**Yes** INSTALL a new center imaging amplifier. REFER to Section 415-01 . TEST the system for normal operation. **No** GO to D9 .

• **Is there a fluctuating AC voltage?**	
D9 CHECK CIRCUITS 1-MD12 (WH) AND 2-MD12 (GY) FOR AN OPEN AND A SHORT TO GROUND	
• Disconnect: Audio Unit C290d. • Measure the resistance between the audio unit, harness side and the center imaging amplifier, harness side; and between the audio unit, harness side and ground as follows: **Audio Unit Connector-Pin** / **Center Imaging Amplifier Connector-Pin** / **Circuit** C290d-6 / C225-2 / 2-MD12 (GY) C290d-5 / C225-1 / 1-MD12 (WH) • **Are the resistance(s) less than 5 ohms between the audio unit and the center imaging amplifier, and greater than 10,000 ohms between the audio unit and ground?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. TEST the system for normal operation after the repair. **No** REPAIR the circuit in question. TEST the system for normal operation.
D10 CHECK CIRCUIT 7-MD12 (YE) FOR AN OPEN AND A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between the center imaging amplifier C225-13, circuit 7-MD12 (YE), harness side and the audio unit C290d-8, circuit 7-MD12 (YE), harness side; and between the center imaging amplifier C225-13, circuit 7-MD12 (YE), harness side and ground.  A0073496 • **Is the resistance less than 5 ohms between the center imaging amplifier and the audio unit and greater than 10,000 ohms between the center imaging amplifier and ground?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REPAIR the circuit. TEST the system for normal operation.
D11 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE INOPERATIVE CENTER IMAGING SPEAKER	
• Disconnect: Inoperative Center Imaging Speaker. • Key in ON position. • For the LH center imaging speaker, measure the voltage between the center imaging speaker C230-1, circuit 8-MD30 (WH/BU), harness side and C230-2, circuit 10-MD30 (GY/VT), harness side.	**Yes** INSTALL a new center imaging speaker. REFER to Section 415-03 . TEST the system for normal operation. **No** GO to D12 .



- For the RH center imaging speaker, measure the voltage between the center imaging speaker C231-1, circuit 8-MD31 (WH/GN), harness side and C231-2, circuit 10-MD31 (GY/OG), harness side.



- **Is there a fluctuating AC voltage?**

D12 CHECK CIRCUITS 8-MD30 (WH/BU), 8-MD31 (WH/GN), 10-MD30 (GY/VT), AND 10-MD31 (GY/OG) FOR AN OPEN AND A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Center Imaging Amplifier C225. • Measure the resistance between the center imaging amplifier, harness side and the suspect center imaging speaker, harness side; and between the center imaging amplifier, harness side and ground as follows: • **Is the resistance less than 5 ohms between the center imaging amplifier and the suspect center imaging speaker, and greater than 10,000 ohms between the center imaging amplifier and ground?**	**Yes** INSTALL a new center imaging amplifier. REFER to Section 415-01 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Location	Center Imaging Amplifier Connector-Pin	Center Imaging Speaker Connector-Pin	Circuit
LH	C225-7	C230-1	8-MD30 (WH/BU)
LH	C225-8	C230-2	10-MD30 (GY/VT)
RH	C255-5	C231-1	8-MD31 (WH/GN)
RH	C225-6	C231-2	10-MD31 (GY/OG)

Pinpoint Test E: Poor Quality/Distorted Sound or No Sound From One or More Speakers (Not All Speakers) Navigation Audio Unit Only

Normal Operation

The audio unit directs the audio signals to the audio amplifier through separate positive and negative circuits for each of the 4 audio channels LH front, RH front, LH rear, and RH rear. The signals are then amplified by the audio amplifier and sent to the 4 door speakers. The audio unit provides internal circuit protection for shorts to ground, shorts to B+ battery, or shorts between any output circuits.

Possible Causes

- speaker(s)
- audio unit
- audio amplifier
- circuit 8-MD10 (WH/BK) open or short to ground
- circuit 8-MD10A (WH/BK) open or short to ground
- circuit 8-MD11 (WH/VT) open or short to ground
- circuit 8-MD11A (WH/VT) open or short to ground
- circuit 8-MD17 (WH/RD) open or short to ground
- circuit 8-MD17A (WH/RD) open or short to ground
- circuit 8-MD18 (WH) open or short to ground
- circuit 8-MD18A (WH) open or short to ground
- circuit 10-MD10 (GY/BK) open or short to ground
- circuit 10-MD10A (GY/BK) open or short to ground
- circuit 10-MD11 (GY/WH) open or short to ground
- circuit 10-MD11A (GY/WH) open or short to ground
- circuit 10-MD17 (GY/RD) open or short to ground
- circuit 10-MD17A (GY/RD) open or short to ground
- circuit 10-MD18 (GY) open or short to ground
- circuit 10-MD18A (GY) open or short to ground
- circuit 30-MD27A (RD/WH) open or short to ground
- circuit 30-MD27B (RD/WH) open or short to ground
- circuit 30-MD27C (RD/WH) open or short to ground
- circuit 31-MD27A (BK/WH) open
- circuit 31-MD27B (BK/WH) open
- circuit 31-MD27C (BK/WH) open

PINPOINT TEST E: POOR QUALITY/DISTORTED SOUND OR NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) NAVIGATION AUDIO UNIT ONLY

Test Step	Result / Action to Take
E1 CHECK FOR SOUND	
• Key in ON position. • Turn on the audio unit. • Carry out the speaker walk-around test. • **Do all 4 speakers have poor quality/distorted sound or no sound?**	**Yes** GO to E6 . **No** GO to E2 .
E2 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE SPEAKER WITH POOR QUALITY/DISTORTED SOUND OR NO SOUND	

• Key in OFF position. • Disconnect: Speaker(s) with poor quality/distorted sound or no sound. • Key in ON position. • Turn on the audio unit. • Measure the voltage between pin 1, harness side and pin 2, harness side of the suspect speaker as follows: **Speaker** / **Pin 1 Circuit** / **Pin 2 Circuit** LH front C523 / 8-MD10 (WH/BK) / 10-MD10 (GY/BK) RH front C612 / 8-MD17 (WH/RD) / 10-MD17 (GY/RD) LH rear C702 / 8-MD11 (WH/VT) / 10-MD11 (GY/WH) RH rear C802 / 8-MD18 (WH) / 10-MD18 (GY)  A0057116 • **Is there a fluctuating AC voltage?**	**Yes** INSTALL a new speaker. REFER to Section 415-03 . TEST the system for normal operation. **No** GO to E3 .
E3 CHECK CIRCUITS 8-MD10 (WH/BK), 8-MD11 (WH/VT), 8-MD17 (WH/RD), 8-MD18 (WH), 10-MD10 (GY/BK), 10-MD11 (GY/WH), 10-MD17 (GY/RD), AND 10-MD18 (GY) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Audio Amplifier C4208b. • Disconnect: Suspect Speaker(s). • Measure the resistance between the audio amplifier, harness side and the suspect speaker, harness side; and between the audio amplifier, harness side and ground as follows: **Location** / **Audio Amplifier Connector-Pin** / **Speaker Connector-Pin** / **Circuit** LH front / C4208b-7 / C523-1 / 8-MD10 (WH/BK) LH front / C4208b-8 / C523-2 / 10-MD10 (GY/BK) RH front / C4208b-3 / C612-1 / 8-MD17 (WH/RD) RH front / C4208b-4 / C612-2 / 10-MD17 (GY/RD) LH rear / C4208b-5 / C702-1 / 8-MD11 (WH/VT)	**Yes** GO to E4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

LH rear	C4208b-6	C702-2	10-MD11 (GY/WH)
RH rear	C4208b-1	C802-1	8-MD18 (WH)
RH rear	C4208b-2	C802-2	10-MD18 (GY)

- **Are the resistance(s) less than 5 ohms between the audio amplifier and the suspect speaker, and greater than 10,000 ohms between the audio amplifier and ground?**

E4 CHECK THE AUDIO OUTPUT SIGNAL TO THE AUDIO AMPLIFIER

- Key in OFF position.
- Disconnect: Audio Amplifier C4208a.
- Key in ON position.
- Measure the voltage between the audio amplifier C4208a, signal circuit, harness side, and the audio amplifier C4208a, return circuit, harness side for the suspect speaker as follows:

Speaker Location	Audio Amplifier Signal (Pin) Circuit	Audio Amplifier Return (Pin) Circuit
LH front	(8) 8-MD10A (WH/BK)	(4) 10-MD10A (GY/BK)
RH front	(6) 8-MD17A (WH/RD)	(2) 10-MD17A (GY/RD)
LH rear	(7) 8-MD11A (WH/VT)	(3) 10-MD11A (GY/WH)
RH rear	(5) 8-MD18A (WH)	(1) 10-MD18A (GY)

- **Is there a fluctuating AC voltage?**

Yes
REMOVE the audio amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

No
GO to E5 .

E5 CHECK CIRCUITS 8-MD10A (WH/BK), 8-MD11A (WH/VT), 8-MD17A (WH/RD), 8-MD18A (WH), 10-MD10A (GY/BK), 10-MD11A (GY/WH), 10-MD17A (GY/RD), AND 10-MD18A (GY) FOR AN OPEN OR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: Audio Unit C2253d.
- Measure the resistance between the audio unit, harness side, and the audio amplifier, harness side; and between the audio unit, harness side and ground, for the suspect speaker as follows:

Speaker Location	Audio Unit Connector-Pin	Audio Amplifier Connector-Pin	Circuit
LH front	C2253d-1	C4208a-8	8-MD10A (WH/BK)
LH front	C2253d-10	C4208a-4	10-MD10A (GY/BK)

Yes
REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

No
REPAIR the circuit in question. TEST the system for normal operation.

RH front	C2253d-2	C4208a-6	8-MD17A (WH/RD)
RH front	C2253d-11	C4208a-2	10-MD17A (GY/RD)
LH rear	C2253d-3	C4208a-7	8-MD11A (WH/VT)
LH rear	C2253d-12	C4208a-3	10-MD11A (GY/WH)

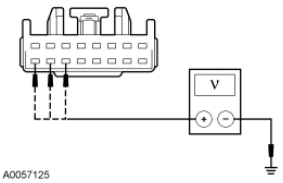
- **Are the resistance(s) less than 5 ohms between the audio unit and the audio amplifier, and greater than 10,000 ohms between the audio unit and ground?**

E6 CHECK FOR VOLTAGE TO THE AUDIO AMPLIFIER

- Key in OFF position.
- Disconnect: Audio Amplifier C4208b.
- Key in ON position.
- Measure the voltage between the audio amplifier C4208b, harness side, and the ground as follows:

Audio Amplifier C4208b Pin	Circuit
14	Circuit 30-MD27A (RD/WH)
15	Circuit 30-MD27B (RD/WH)
16	Circuit 30-MD27C (RD/WH)



- **Are the voltages greater than 10 volts?**

Yes
GO to E7 .

No
REPAIR the circuit. TEST the system for normal operation.

E7 CHECK CIRCUITS 31-MD27A (BK/WH), 31-MD27B (BK/WH), AND 31-MD27C (BK/WH) FOR AN OPEN

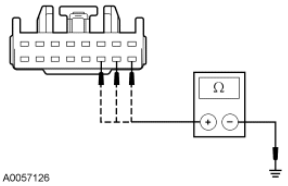
- Key in OFF position.
- Measure the resistance between the audio amplifier C4208b, harness side, and the ground as follows:

Audio Amplifier C4208b Pin	Circuit

Yes
REMOVE the audio amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

No

9	Circuit 31-MD27A (BK/WH)
10	Circuit 31-MD27B (BK/WH)
11	Circuit 31-MD27C (BK/WH)



- **Are the resistances less than 5 ohms?**

REPAIR the circuit in question. TEST the system for normal operation.

Pinpoint Test F: The Subwoofer is Inoperative CDX6 Only

Normal Operation

The subwoofer speakers are powered from a separate subwoofer amplifier. The clip detection circuit 7-MD19 (YE/RD), carries out 2 functions: to turn on the subwoofer amplifier, and to indicate to the audio unit when the subwoofer output distortion signal reaches a damaging level. The audio unit then reduces the audio output signal to the subwoofer amplifier.

Possible Causes

- battery junction box (BJB) fuse 18 (20A)
- subwoofer amplifier
- subwoofer(s)
- audio unit
- circuit 1-MD19 (WH/RD) open or short to ground
- circuit 2-MD19 (GY/RD) open or short to ground
- circuit 7-MD19 (YE/RD) open or short to ground
- circuit 8-MD21 (WH/BU) open or short to ground
- circuit 8-MD22 (WH/GN) open or short to ground
- circuit 10-MD21 (GY/VT) open or short to ground
- circuit 10-MD22 (GY/OG) open or short to ground
- circuit 30-MD19A (RD/BU) open or short to ground
- circuit 31-MD19 (BK/BU) open

PINPOINT TEST F: THE SUBWOOFER IS INOPERATIVE CDX6 ONLY

Test Step	Result / Action to Take
F1 CHECK THE SUBWOOFER OPERATION	
• Key in ON position. • Turn the audio unit on. • Check the operation of the subwoofer speakers. • **Are both subwoofer speakers inoperative?**	**Yes** GO to F2 . **No** GO to F7 .
F2 CHECK CIRCUIT 7-MD19 (YE/RD) FOR VOLTAGE	

• Key in OFF position. • Disconnect: Subwoofer Amplifier C466a. • Key in ON position. • Turn on the audio unit. • Measure the voltage between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  A0061041 • **Is the voltage greater than 10 volts?**	**Yes** GO to F3 . **No** GO to F9 .
F3 CHECK CIRCUIT 30-MD19A (RD/BU) FOR VOLTAGE	
• Measure the voltage between the subwoofer amplifier C466a-5, circuit 30-MD19A (RD/BU), harness side and ground.  A0061042 • **Is the voltage greater than 10 volts?**	**Yes** GO to F4 . **No** REPAIR the circuit. TEST the system for normal operation.
F4 CHECK CIRCUIT 31-MD19 (BK/BU) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the subwoofer amplifier C466a-2, circuit 31-MD19 (BK/BU), harness side and ground.  A0057129 • **Is the resistance less than 5 ohms?**	**Yes** GO to F5 . **No** REPAIR the circuit. TEST the system for normal operation.
F5 CHECK CIRCUIT 1-MD19 (WH/RD) FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: Audio Unit C290d. • Measure the resistance between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and the audio unit C290d-1, circuit 1-MD19 (WH/RD), harness side; and between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and ground.	**Yes** GO to F6 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0073497 • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	
F6 CHECK CIRCUIT 2-MD19 (GY/RD) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side and the audio unit C290d-2, circuit 2-MD19 (GY/RD), harness side; and between the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side and ground.  N0002274 • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	**Yes** GO to F10 . **No** REPAIR the circuit. TEST the system for normal operation.
F7 CHECK CIRCUITS 8-MD21 (WH/BU), 8-MD22 (WH/GN), 10-MD21 (GY/VT), AND 10-MD22 (GY/OG) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Subwoofer Speakers. • Disconnect: Subwoofer Amplifier C466b. • Measure the resistance between the subwoofer amplifier output and return circuits, harness side; and between each subwoofer amplifier pin, harness side and ground as follows: **Speaker / Output / Return** LH subwoofer: C466b-3, circuit 8-MD22 (WH/GN) / C466b-4, circuit 10-MD22 (GY/OG) RH subwoofer: C466b-1, circuit 8-MD21 (WH/BU) / C466b-2, circuit 10-MD21 (GY/VT) • **Is the resistance less than 5 ohms between the subwoofer amplifier and the speakers, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	**Yes** GO to F8 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
F8 CHECK THE SUBWOOFER SPEAKER	

• Substitute the inoperative subwoofer speaker with a known good subwoofer speaker. • Key in ON position. • Check the operation of the subwoofer speakers. • **Does the known good subwoofer speaker operate correctly?**	**Yes** INSTALL a new subwoofer speaker. REFER to Section 415-03 . TEST the system for normal operation. **No** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.
F9 CHECK CIRCUIT 7-MD19 (YE/RD) FOR OPEN OR A SHORT TO GROUND	
• Disconnect: Audio Unit C290d. • Measure the resistance between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and the audio unit C290d-4, circuit 7-MD19 (YE/RD), harness side; and between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  A0073499 • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the audio unit and ground?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REPAIR the circuit. TEST the system for normal operation.
F10 CHECK FOR A SUBWOOFER AUDIO SIGNAL	
• Connect: Audio Unit . • Key in ON position. • Turn the audio unit on. • Measure the voltage between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side.  A0057176 • **Is there a fluctuating AC voltage?**	**Yes** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

Pinpoint Test G: The Subwoofer is Inoperative Navigation Audio Unit Only

Normal Operation

The subwoofer speakers are powered from a separate subwoofer amplifier. The clip detection circuit, 7-MD19 (YE/RD), carries out 2 functions: to turn on the subwoofer amplifier, and to indicate to the audio unit when the subwoofer output distortion signal reaches a damaging level. The audio unit then reduces the audio output signal to the subwoofer amplifier.

Possible Causes

- subwoofer amplifier
- subwoofer speaker(s)
- audio unit
- circuit 1-MD19 (WH/RD) open or short to ground
- circuit 2-MD19 (GY/RD) open or short to ground
- circuit 7-MD19 (YE/RD) open or short to ground
- circuit 8-MD21 (WH/BU) open or short to ground
- circuit 8-MD22 (WH/GN) open or short to ground
- circuit 10-MD21 (GY/VT) open or short to ground
- circuit 10-MD22 (GY/OG) open or short to ground
- circuit 30-MD19A (RD/YE) open or short to ground
- circuit 31-MD19A (BK) open

PINPOINT TEST G: THE SUBWOOFER IS INOPERATIVE NAVIGATION AUDIO UNIT ONLY

Test Step	Result / Action to Take
G1 CHECK THE SUBWOOFER OPERATION	
• Key in ON position. • Turn the audio unit on. • Check the operation of the subwoofer speakers. • **Are both subwoofer speakers inoperative?**	**Yes** GO to G2 . **No** GO to G9 .
G2 CHECK CIRCUIT 7-MD19 (YE/RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Subwoofer Amplifier C466a. • Key in ON position. • Turn the audio unit on. • Measure the voltage between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  A0057127 • **Is any voltage present?**	**Yes** GO to G3 . **No** GO to G8 .
G3 CHECK CIRCUIT 30-MD19A (RD/BU) FOR VOLTAGE	
• Measure the voltage between the subwoofer amplifier C466a-5, circuit 30-MD19A (RD/YE), harness side and ground.	**Yes** GO to G4 . **No** REPAIR the circuit. TEST

 A0057128 • **Is the voltage greater than 10 volts?**	the system for normal operation.
G4 CHECK CIRCUIT 31-MD19A (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the subwoofer amplifier C466a-2, circuit 31-MD19A (BK), harness side and ground.  A0057129 • **Is the resistance less than 5 ohms?**	**Yes** GO to G5 . **No** REPAIR the circuit. TEST the system for normal operation.
G5 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE AMPLIFIER	
• Key in ON position. • Turn the audio unit on. • Measure the voltage between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side.  A0057130 • **Is there a fluctuating AC voltage?**	**Yes** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** GO to G6 .
G6 CHECK CIRCUIT 1-MD19 (WH/RD) FOR AN OPEN AND A SHORT TO GROUND	
• Disconnect: Audio Unit C2253d. • Measure the resistance between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and the audio unit C2253d-7, circuit 1-MD19 (WH/RD), harness side; and between the subwoofer amplifier C466a-7, circuit 1-MD19 (WH/RD), harness side and ground.  A0059762	**Yes** GO to G7 . **No** REPAIR the circuit. TEST the system for normal operation.

• **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	
G7 CHECK CIRCUIT 2-MD19 (GY/RD) FOR AN OPEN AND A SHORT TO GROUND	
• Measure the resistance between the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side and the audio unit C2253d-16, circuit 2-MD19 (GY/RD), harness side; and between the subwoofer amplifier C466a-8, circuit 2-MD19 (GY/RD), harness side and ground.  • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REPAIR the circuit. TEST the system for normal operation.
G8 CHECK CIRCUIT 7-MD19 (YE/RD) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Audio Unit C2253d. • Disconnect: Subwoofer Amplifier C466a. • Measure the resistance between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and the audio unit C2253d-18, circuit 7-MD19 (YE/RD), harness side; and between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	**Yes** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** REPAIR circuit in question. TEST the system for normal operation.
G9 CHECK FOR AN AUDIO SIGNAL OUTPUT TO THE INOPERATIVE SUBWOOFER SPEAKER	
• Disconnect: Inoperative Subwoofer Speaker. • Key in ON position. • For the LH subwoofer speaker, measure the voltage between the subwoofer speaker C4068-1, circuit 8-MD22 (WH/GN), harness side and C4068-2, circuit 10-MD22 (GY/OG), harness side.	**Yes** INSTALL a new subwoofer speaker. REFER to Section 415-03 . TEST the system for normal operation. **No**

 A0057116 • For the RH subwoofer speaker, measure the voltage between the subwoofer speaker C4069-1, circuit 8-MD21 (WH/BU), component side and C4069-2, circuit 10-MD21 (GY/VT), component side.  A0057116 • **Is there a fluctuating AC voltage?**	GO to G10 .
G10 CHECK CIRCUITS 8-MD21 (WH/BU), 8-MD22 (WH/GN), 10-MD21 (GY/VT), AND 10-MD22 (GY/OG) FOR AN OPEN AND A SHORT TO GROUND	
• Disconnect: Subwoofer Amplifier C466b. • Measure the resistance between the inoperative subwoofer speaker, harness side, and the subwoofer amplifier, harness side; and between the inoperative subwoofer speaker, harness side and ground as follows: • **Is the resistance between the inoperative subwoofer speaker and the subwoofer amplifier less than 5 ohms, and greater than 10,000 ohms between the inoperative subwoofer speaker and ground?**	**Yes** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio repair facility. TEST the system for normal operation after the repair. **No** REPAIR the circuit in question. TEST the system for normal operation.

Speaker Location	Subwoofer Speaker Connector-Pin	Subwoofer Amplifier Connector-Pin	Circuit
LH	C4068-1	C466b-3	8-MD22 (WH/GN)
LH	C4068-2	C466b-4	10-MD22 (GY/OG)
RH	C4069-1	C466b-1	8-MD21 (WH/BU)
RH	C4069-2	C466b-2	10-MD21 (GY/VT)

Pinpoint Test H: The Auxiliary Audio Control Is Inoperative/Does Not Operate Correctly Steering Wheel Control Switches

Normal Operation

The steering wheel audio control consists of a specific resistor value for each button function creating a voltage divider. When a button is pressed, a specific voltage is sent to the audio unit. The audio unit uses the

reference voltage to determine which input function has been selected. Circuit 8-MD26 (WH/BK) is the reference voltage circuit between the steering wheel audio controls and the audio unit.

Possible Causes

- steering wheel control switches
- audio unit
- clockspring
- circuit 8-MD26 (WH/BK) open or short to ground
- circuit 31S-MD26 (BK/RD) open
- powertrain control module (PCM)
- horn switch harness

PINPOINT TEST H: THE AUXILIARY AUDIO CONTROL IS INOPERATIVE/DOES NOT OPERATE CORRECTLY STEERING WHEEL CONTROL SWITCHES

Test Step	Result / Action to Take
H1 CHECK THE STEERING WHEEL AUDIO CONTROL SWITCH RESISTANCES	
• Key in OFF position. • Disconnect: Audio Unit C290b (DM100i) (CDX6). • Disconnect: Audio Unit C2253a (Navigation). • Key in ON position. • While pressing the steering wheel control switches, measure the resistance between the audio unit, C290b-18, circuit 8-MD26 (WH/BK) harness side and the audio unit C290b-19 circuit 31S-MD26 (BK/RD), harness side; or between the navigation audio unit C2253a-18, circuit 8-MD26 (WH/BK), harness side and the navigation audio unit C2253a-19 , circuit 31S-MD26 (BK/RD), harness side.	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** GO to H2 .

Switch (DM100i/CDX6)	Switch (Navigation)	Resistance Range
VOL down	MEDIA	53.1-57 ohms
VOL up	NEXT	145.3-151 ohms
SEEK up	VOL up	297.7-307 ohms
SEEK down	VOL down	556.1-570 ohms
MEDIA	REPEAT	1,026.4-1,050 ohms
Phone/Mute	VOICE	2,016.4-2,060 ohms
none	none	greater than 5,000 ohms

 A0073500 • **Are the resistances within specifications?**	
H2 CHECK CIRCUIT 8-MD26 (WH/BK) FOR AN OPEN OR A SHORT TO GROUND	
NOTE: Before disconnecting the clockspring, remove the driver side air bag module. Refer to Section 501-20B . • Disconnect: Clockspring C218b. • Measure the resistance between the audio unit C290b-18 (CDX6, DM100i) C2253a-18 (Navigation), circuit 8-MD26 (WH/BK), harness side and the clock spring C218b-2, circuit 8-MD26 (WH/BK), harness side; and between the audio unit C290b-18 (CDX6, DM100i) C2253a-18 (Navigation), circuit 8-MD26 (WH/BK), harness side and ground  A0073501 • **Is the resistance less than 5 ohms between the audio unit and the clockspring, and greater than 10,000 ohms between the audio unit and ground?**	**Yes** GO to H3 . **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK CIRCUIT 31S-MD26 (BK/RD) FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: PCM C175b. • Measure the resistance between the clockspring C218b-3, circuit 31S-MD26 (BK/RD), harness side and the audio unit C290b-19 (CDX6/DM100i) or C2253a-19 (Navigation), circuit 31S-MD26 (BK/RD), harness side; and between the clockspring C218b-3, circuit 31S-MD26 (BK/RD), harness side and ground.  A0073502 • **Is the resistance less than 5 ohms between the clockspring and the audio unit and greater than 10,000 ohms between the clockspring and ground?**	**Yes** GO to H4 . **No** REPAIR the circuit. TEST the system for normal operation.
H4 CHECK THE CLOCKSPRING	

• Disconnect: Horn Switch Connector. • Measure the resistance between the clockspring C218b-2, component side and the horn switch connector pin 6, component side; and between the clockspring C218b-3, component side and the horn switch connector pin 3, component side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to H5 . **No** INSTALL a new clockspring. REFER to Section 501-20B . TEST the system for normal operation.
H5 CHECK THE HORN SWITCH HARNESS	
• Check the horn switch harness for opens and shorts. • **Is the horn switch harness OK?**	**Yes** GO to H6 **No** INSTALL a new horn switch harness. TEST the system for normal operation.
H6 CHECK CIRCUITS 8-MD26 (WH/BK) AND 31S-MD26 (BK/RD) FOR SHORTS TO VOLTAGE	
• Key in ON position. • Measure the voltage between the audio unit C290b-18, circuit 8-MD26 (WH/BK), harness side and ground; and between C290b-19 circuit 31S-MD26 (BK/RD), harness side and ground (CDX6). Measure the voltage between the navigation audio unit C2253a-18, circuit 8-MD26 (WH/BK), harness side and ground; and between navigation audio unit C2253a-19, circuit 31S-MD26 (BK/RD), harness side and ground  • **Is any voltage present?**	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to H7 .
H7 CHECK THE CLOCKSPRING FOR SHORTS TO VOLTAGE	
• Key in OFF position. • Connect: Clockspring C218b. • Key in ON position. • For CDX6 and DM100i, measure the voltage between the audio unit C290b-18, circuit 8-MD26 (WH/BK), harness side and ground; and between C290b-19, circuit 31S-MD26 (BK/RD), harness side and ground. For Navigation, measure the voltage between the navigation audio unit C2253a-18, circuit 8-MD26 (WH/BK), harness side and ground; and between navigation audio unit C2253a-19, circuit 31S-MD26 (BK/RD), harness side and ground.	**Yes** INSTALL a new clockspring. REFER to Section 501-20B . TEST the system for normal operation. **No** GO to H8 .

 A0073503 • **Is any voltage present?**	
H8 CHECK CIRCUIT 31S-PG24 (BK/OG) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Connect: PCM C175b. • Key in ON position. • For CDX6 or DM100i, measure the voltage between the audio unit C290b-19, circuit 31S-MD26 (BK/RD), harness side and ground. For Navigation, measure the voltage between the audio unit C2253a-19, circuit 31S-MD26 (BK/RD), harness side and ground.  N0013112 • **Is any voltage present?**	**Yes** The PCM is suspect. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnostics. **No** INSTALL new steering wheel control switches. REFER to Section 415-01 . TEST the system for normal operation.

Pinpoint Test I: Loud Popping Sound When Cycling The Ignition Switch CDX6 And Navigation Audio Unit Only

Normal Operation

The START input circuit 50-MD15 (GY/OG) is sent to the audio unit when the ignition switch is turned to the START position. The audio unit then immediately mutes all speaker amplifier outputs and the subwoofer amplifier enable circuit to eliminate the possibility of speaker pops during engine cranking.

Possible Causes

- audio unit
- circuit 7-MD19 (YE/RD) open, short to voltage, or short to ground
- subwoofer amplifier

PINPOINT TEST I: LOUD POPPING SOUND WHEN CYCLING THE IGNITION SWITCH CDX6 AND NAVIGATION AUDIO UNIT ONLY

Test Step	Result / Action to Take
I1 CHECK CIRCUIT 7-MD19 (YE/RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Subwoofer Amplifier C466a. • Key in ON position. • **NOTE:** There should be voltage present when the ignition switch is in the ACC and ON positions, but not when the	**Yes** GO to I2 . **No** GO to I3 .

ignition switch is in the OFF position. • Measure the voltage between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground, while cycling the ignition switch from OFF to ACC to ON to ACC to OFF. Pause in the ACC and ON positions to allow for the audio unit to power up and initialize.  A0057140 • **Is the voltage present as expected?**	
I2 SUBSTITUTE A KNOWN GOOD SUBWOOFER AMPLIFIER	
• Key in OFF position. • Substitute a known good subwoofer amplifier. • Cycle the ignition switch from OFF to ACC to ON to ACC to OFF. • **Is the popping eliminated?**	**Yes** REMOVE the subwoofer amplifier. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair. **No** GO to I3 .
I3 CHECK CIRCUIT 7-MD19 (YE-RD) FOR VOLTAGE WITHOUT THE AUDIO UNIT ON AND THE IGNITION SWITCH OFF	
• Key in OFF position. • Disconnect: Audio Unit C290d (CDX6). • Disconnect: Navigation C2253d. • Measure the voltage between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  A0057140 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to I4 .
I4 CHECK CIRCUIT 7-MD19 (YE/RD) FOR AN OPEN OR A SHORT TO GROUND	
• For CDX6 or DM100i, measure the resistance between the subwoofer amplifier C466-1, circuit 7-MD19 (YE/RD), harness side and the audio unit C290d-4, circuit 7-MD19 (YE/RD), harness side: and between the subwoofer amplifier C466-1, circuit 7-MD19 (YE/RD), harness side	**Yes** GO to I5 . **No** REPAIR the circuit. TEST the system for normal operation.

and ground.  A0073499 • For Navigation, measure the resistance between the subwoofer amplifier C466a-1, circuit 7-MD27 (YE/RD), harness side and the audio unit C2253d-9, circuit 10-MD27 (YE/RD), harness side: and between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD) harness side and ground.  A0057142 • **Is the resistance less than 5 ohms between the subwoofer amplifier and the audio unit, and greater than 10,000 ohms between the subwoofer amplifier and ground?**	
I5 CHECK CIRCUIT 7-MD19 (YE/RD) FOR VOLTAGE WITH THE IGNITION SWITCH ON	
• Key in ON position. • Measure the voltage between the subwoofer amplifier C466a-1, circuit 7-MD19 (YE/RD), harness side and ground.  A0057140 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized audio system repair facility. TEST the system for normal operation after the repair.

Torque Specifications

Description	Nm	lb-in
Audio unit amplifier screws	9	80
Subwoofer amplifier screws	9	80

Audio System

Printable View (8 KB)

The audio system is enabled when the ignition switch is in the RUN or ACC position. The door speakers are powered directly by the audio unit. The navigation audio unit uses an audio unit amplifier and a subwoofer amplifier to power the door speakers and the subwoofer speakers, respectively. The DM100i unit directly powers the 4 door speakers. It is not equipped with a subwoofer or center imaging speaker. All audio units have steering wheel controls.

The navigation unit is responsible for generating the displays shown on the navigation audio unit screen by using video circuits (color generation and display synchronization), between the navigation unit and the navigation audio unit. When an on-screen menu key is pressed on the navigation audio unit screen, a signal is sent to the navigation unit through the controller area network (CAN) circuits. Refreshed data is then sent through the video circuits, and a new screen is displayed corresponding to which key was pressed. Diagnostic communication between the navigation unit and the navigation audio unit takes place over the CAN circuits. Refer to Section 419-02 for further information about the navigation system.

1	19C894	Center register panel
2		Center register panel electrical connector (part of 14401)
3		Audio unit/dual automatic temperature control (DATC) assembly screws (4 required)
4		Audio unit/dual automatic temperature control (DATC) assembly electrical connectors (part of 14401)
5	150102, 120403	Audio unit/dual automatic temperature control (DATC) assembly
6		Audio unit screws (6 required)
7		Climate control screws (4 required)
8	404452/ 404453	Brackets (RH/LH)
9	150102	Audio unit

Removal and Installation

1. Remove the floor console finish panel.
   - Pull upward from the front of the floor console finish panel to release the retainers.

2. Remove the 4 screws and the console ash tray assembly.
   - Disconnect the electrical connectors.

3. Remove the center register panel.
   - Disconnect the electrical connector.

4. Remove the 4 screws and the audio unit/dual automatic temperature control (DATC) assembly.
   - Disconnect the electrical connectors and the antenna cable.

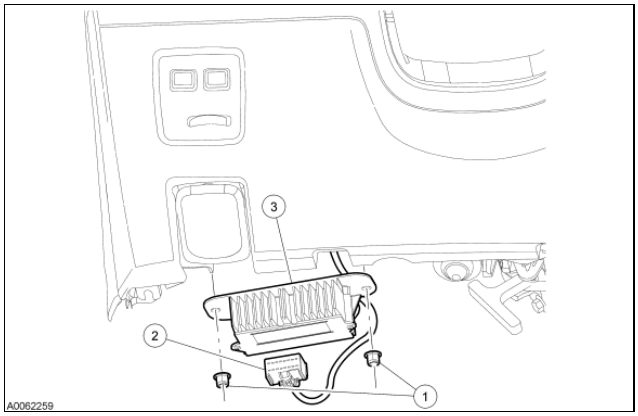
5. Remove the 6 screws and the audio unit from the bracket.

6. To install, reverse the removal procedure.

Audio Amplifier

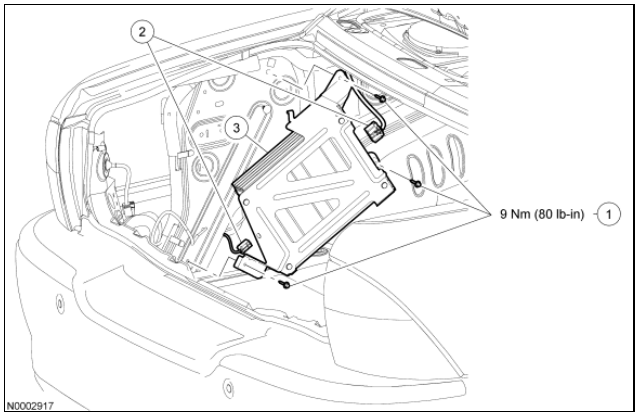
Printable View (184 KB)

Center Imaging Amplifier



Item	Part Number	Description
1	520201	Center imaging amplifier nuts (2 required)
2		Center imaging amplifier electrical connector (part of 14489)
3	18T805A	Center imaging amplifier and bracket

Audio Unit Amplifier



Item	Part Number	Description
1	806886	Audio amplifier screws (3 required)
2		Audio amplifier electrical connectors (part of 14A005)
3	18T806	Audio amplifier and bracket

Removal and Installation

All Amplifiers

1. Disconnect the battery. For additional information, refer to Section 414-01 .

Center Imaging Amplifier

2. Remove the driver cowl side trim panel.

3. Remove the 2 center imaging amplifier nuts and the center imaging amplifier.
    - Disconnect the center imaging amplifier electrical connector.

Audio Unit Amplifier

4. Remove the LH trunk trim panel.

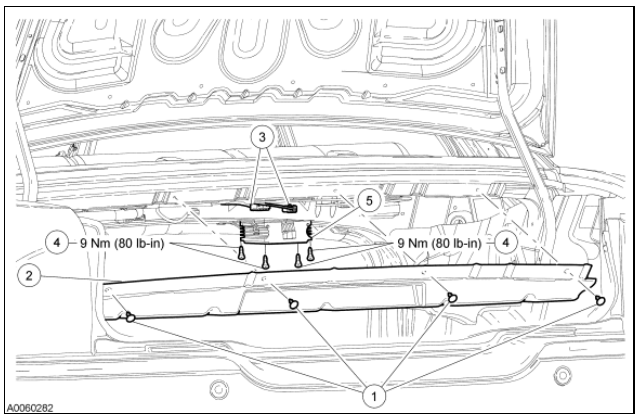
5. Remove the 3 audio amplifier screws and the audio amplifier and bracket.
    - Disconnect the audio amplifier electrical connectors.
    - To install, tighten to 9 Nm (80 lb-in).

All Amplifiers

6. To install, reverse the removal procedure.

Subwoofer Amplifier

Printable View (140 KB)



Item	Part Number	Description
1	811405	Pin-type retainers (4 required)
2	445443	Luggage compartment front cover
3		Subwoofer amplifier electrical connectors (part of 14A005)
4		Subwoofer amplifier screws (4 required)
5	150103	Subwoofer amplifier and bracket

Removal and Installation

1. Disconnect the battery. For additional information, refer to Section 414-01 .

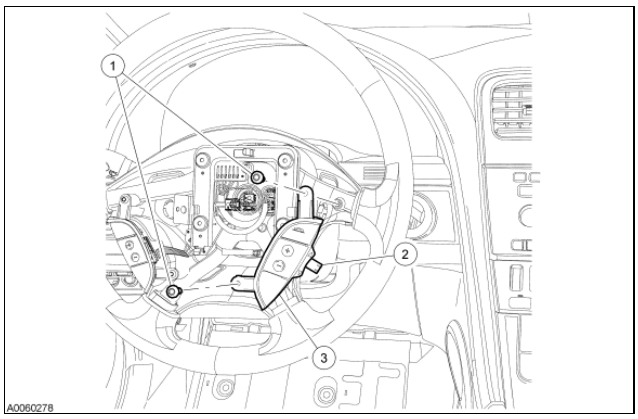
2. Remove the 4 pin-type retainers and the luggage compartment front cover.

3. Remove the 4 screws and the subwoofer amplifier and bracket.
   - Disconnect the electrical connectors.
   - To install, tighten to 9 Nm (80 lb-in).

4. To install, reverse the removal procedure.

Steering Wheel Audio Controls

Printable View (126 KB)



Item	Part Number	Description
1	15835-035	Steering wheel control switch screws (2 required)
2		Steering wheel control switch electrical connector (part of 13A876)
3	14K147-A	Steering wheel control switches

Removal and Installation

1. Remove the driver air bag module. For additional information, refer to Section 501-20B .

2. Remove the 2 screws and the steering wheel control switch.
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

General Specifications

Item	Specification
Rear Window Defroster Repair PM-11 (Canada CPM-11)	WSB-M4J58-B

Torque Specifications

Description	Nm	lb-ft	lb-in
Antenna isolator module bolt	12	9	

Antenna

Printable View (9 KB)

NOTE: The antenna cable is not serviceable, it comes with the interior harness. If the antenna cable needs to be replaced, a new cable needs to be routed and secured to the interior harness.

The antenna system contains an antenna module that helps reduce interference when using the AM/FM bands. The antenna is a conductive trace type, intregal to the rear window glass, and can be repaired, but not installed, separately. For removal and installation of the rear window glass, refer to Section 501-11 . For antenna repair procedures, refer to Window Grid Wire Repair in Section 501-11 .

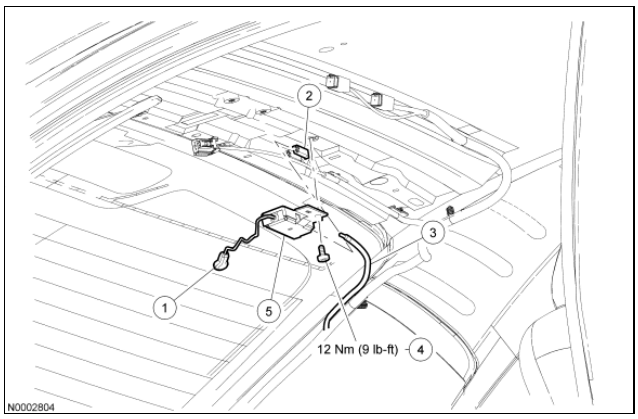
Antenna

Printable View (7 KB)

For diagnosis and testing of the antenna, refer to Section 415-00 .

Antenna Isolator Module

Printable View (111 KB)



Item	Part Number	Description
1		Antenna connector (part of 18C847)
2	14489	Antenna isolator module electrical connector
3	14489	Antenna cable
4		Antenna isolator module bolt (part of 18C847)
5	18C847	Antenna isolator module

Removal and Installation

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Remove the LH and RH rear quarter panel trim panels. For additional information, refer to Section 501-05 .
3. Lower the rear of the headliner.
4. Disconnect the antenna connector from the back glass.
5. Disconnect the antenna isolator module electrical connector.
6. Disconnect the antenna cable.
7. Remove the bolt and the antenna isolator module.
   - To install, tighten to 12 Nm (9 lb-ft).
8. To install, reverse the removal procedure.

Speakers

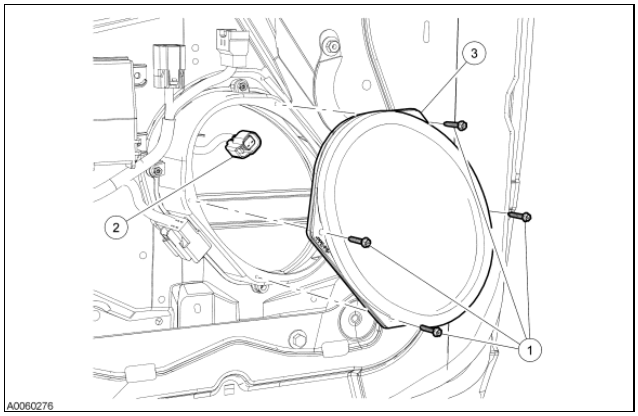
Printable View (7 KB)

Refer to Section 415-00 .

Door Speaker

Printable View (98 KB)

NOTE: The front door speaker is shown, the rear door speaker is similar.



Item	Part Number	Description
1	W701930-S	Door speaker screws (4 required)
2	14A005	Door speaker electrical connector
3	18808	Door speaker

Removal and Installation

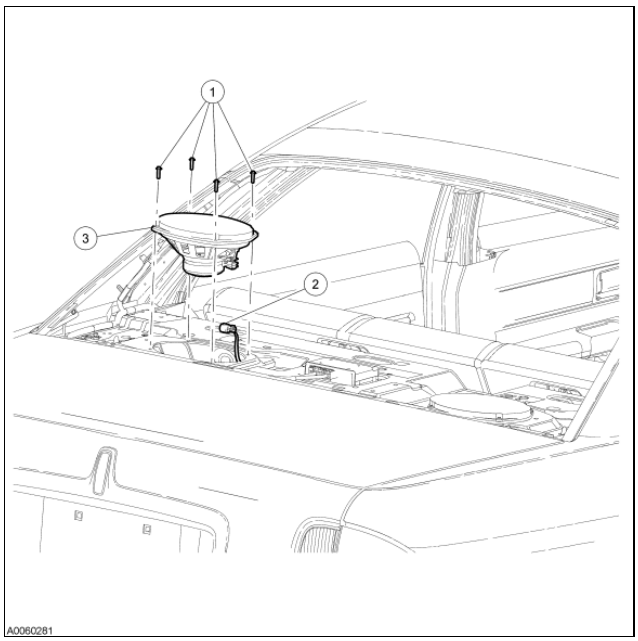
1. Remove the door trim panel. For additional information, refer to Section 501-05 .

2. Remove the 4 screws and the door speaker.
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

Subwoofer Speaker

Printable View (100 KB)



Item	Part Number	Description
1	701930	Subwoofer speaker screws (4 required)
2	14A005	Subwoofer speaker electrical connector
3	18808	Subwoofer speaker

Removal and Installation

1. Remove the parcel shelf trim panel. For additional information, refer to Section 501-05 .

2. Remove the 4 screws and the subwoofer speaker.
   - Disconnect the electrical connector.

3. To install, reverse the removal procedure.

Exterior Lighting

Printable View (16 KB)

NOTE: The front electronic module (FEM), the rear electronic module (REM) and the instrument cluster must be reconfigured before installing a new module. For additional information, refer to Section 418-01 .

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. It is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- if the module which received the input (message) controls the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center), which will indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). All exterior lighting is powered by the switched system power (SSP) feature. For additional information, refer to Switched System Power. A failure of all or any of the SSP features will cause inoperative exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Switched System Power (SSP)

The SSP is utilized by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3 and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, refer to the SSP Index for diagnosis and testing of SSP-related issues.

Headlamps

The headlamps are controlled by the FEM and the instrument cluster. The headlamp and multifunction switches are hard-wired to the instrument cluster. When the headlamp switch is in any position, the instrument cluster will send a command to the FEM through the SCP communication network. The FEM will process this information and output the appropriate command to the headlamps, which are hard-wired to the FEM (if equipped with high intensity discharge (HID) headlamps, the HID relays are hard-wired to and controlled by the FEM). This is the same for the low and high beams and flash-to-pass position. Either low or high beam will provide a lamp outage indication (halogen bulbs only). Fault management of the headlamps will provide some headlamp functionality. In the event of all multifunction switch, all headlamp switch or ignition switch invalid or missing data failures, the low beams will be illuminated. There is also a headlamp battery saver

feature. This feature turns off the headlamps ten minutes after the ignition switch is turned OFF when the headlamp switch is in the headlamps ON position. The battery saver does not function if the headlamp switch is in the parking lamps ON position.

NOTE: Daytime running lamps (DRL) feature is available for Canadian vehicles only.

Autolamps and DRL are 2 functions which the FEM may be configured to include.

Autolamps

The autolamps are controlled by the headlamp switch, photocell sensor, instrument cluster and the FEM. The headlamps may be in the high or low beam position depending on the multifunction switch position. When the headlamp switch is in the autolamp position, the instrument cluster sends an ON or OFF command to the FEM, depending on the signal from the autolamp sensor. The FEM processes this information and outputs the appropriate command to the headlamps. The headlamps are hard-wired to the FEM. The autolamps remain ON for approximately 20 seconds to 3 minutes (depending on customer preferences) after the ignition switch is changed from the ON position to the ACC or OFF position.

Turn Signal, Cornering and Hazard Lamps

The LH and RH front turn signal, LH and RH rear turn signal outputs, and front and rear hazard lamp outputs are controlled by the FEM and REM. The multifunction switch and the hazard switch are hard-wired to the instrument cluster. When the switch is in the left- or right-turn position, or the hazard switch is in the ON position, the instrument cluster sends a command through the standard corporate protocol (SCP) network to the FEM and REM, which processes this information and outputs the appropriate command to the front and rear turn signal and hazard lamps. All turn signal lamps will provide lamp outage indication.

Parking, Rear or License Lamps

For the LH and RH rear parking, license, and LH and RH front parking lamps, outputs are controlled by the FEM and REM. The headlamp switch is hard-wired to the instrument cluster. When the headlamp switch is in the headlamps ON or parking lamps ON position, the instrument cluster sends a command via the network link to the FEM and REM. The FEM and REM process this information and output the appropriate command to the parking or license lamps, which are hard-wired to the FEM and REM. Only the left and right rear lamps will provide lamp outage indication. Fault management of the parking lamps provides rear parking lamp functionality in the event of certain multifunction switch, headlamp switch, ignition switch, FEM or REM failures.

Fog Lamps

The fog lamps are controlled by the headlamp switch. The switch toggles the fog lamps between on and off. When activated, the switch sends voltage to the instrument cluster. The instrument cluster sends a signal to the FEM which activates the fog lamp.

Reversing Lamps

The reversing lamps are controlled by the REM and powertrain control module (PCM). The PCM sends a message through the SCP communication network to the REM indicating the transmission is in REVERSE. The REM processes this information and outputs the command to the reversing lamps which are hard-wired to the REM. Fault management of the reversing lamps will provide limited reversing lamp functionality. In the event of missing or invalid transmission data, the reversing lamps remain in the last state of operation prior to the failure for one key cycle. In the event of invalid or missing data for the ignition switch, the lamps will work in relation to PRNDL messages.

Headlamps

Printable View (328 KB)

Refer to Wiring Diagrams Cell 87 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Headlamp switch	• Auxiliary junction box (AJB) fuses: ♦ 7 (15A) (RH high intensity discharge [HID] relay if equipped) ♦ 8 (15A) (LH HID relay if equipped) • Central junction box (CJB) fuses: ♦ 9 (10A) (RH low beam) ♦ 11 (10A) (LH high beam) ♦ 20 (10A) (FEM and instrument cluster) ♦ 23 (10A) (RH high beam) ♦ 25 (10A) (LH low beam) • Battery junction box (BJB) fuses: ♦ 23 (30A) (SSP4) ♦ 24 (30A) (SSP3) ♦ 27 (30A) (SSP1) ♦ 32 (30A) (SSP2) • Circuitry • Front electronic module (FEM) • Instrument cluster • Halogen bulbs

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for FEM, refer to Section 418-00 .
   - No response/not equipped for instrument cluster, refer to Section 413-01 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index or Instrument Cluster Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 .
B1567	Lamp Headlamp High-Beam Circuit Failure	FEM	If high beam is inoperative, Go To Pinpoint Test D . If high beam is always on, Go To Pinpoint Test E .
B1794	Lamp Headlamp Low-Beam Circuit Failure	FEM	If low beam is inoperative, Go To Pinpoint Test C . If low beam is always on, Go To Pinpoint Test E .

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	Instrument cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster Self-Test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01 .
B1470			Go To Pinpoint Test E .

	Lamp Headlamp Input Circuit Failure	Instrument cluster	
B1567	Lamp Headlamp High-Beam Circuit Failure	Instrument cluster	Go To Pinpoint Test B .

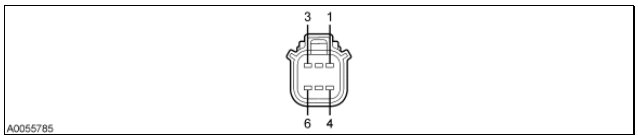
Switched System Power (SSP) Relay Index

Relay	Fuse	Controlled System(s)
SSP1	BJB Fuse 27 (30A)	• LH high beam headlamp (FEM) • RH HID relay (if equipped) (FEM) • RH low beam headlamp • LH front parking/turn marker lamp (FEM) • RH front parking/turn marker lamp (FEM) • RH side marker lamps (FEM) • LH side marker lamps (FEM) • Driver power door lock (FEM) • Driver power mirror
SSP2	BJB Fuse 32 (30A)	• RH high beam headlamp (FEM) • LH HID relay (if equipped) (FEM) • LH low beam headlamp (FEM) • Interior courtesy/ demand lighting • Windshield wiper washer pump • Switch illumination backlighting
SSP3	BJB Fuse 24 (30A)	• High mounted stoplamp (REM) • RH stop/parking lamp (REM) • Reversing lamps (REM) • LH rear turn signal (REM) • Passenger power mirror
SSP4	BJB Fuse 23 (30A)	• LH stop/parking lamp (REM) • RH rear turn signal (REM) • License lamps • Passenger door/side locks (REM) • Luggage compartment lid release solenoid/switch • Fuel door release solenoid/switch • Luggage compartment lamp

Symptom Chart

Symptom Chart
Connector Circuit Reference

LH Headlamp C1021, RH Headlamp C1041



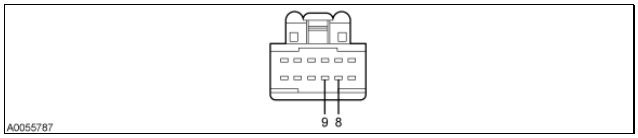
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C1021) (standard headlamp)	29S-LE16 (OG/GN) low beam headlamp power supply circuit	Greater than 10 volts with the key ON.
1 (C1021) (HID headlamp)	30S-LE16 (RD/BK) low beam headlamp power supply circuit	0 voltage, less than 5 ohms between the headlamp and the LH HID relay. Greater than 10 volts with the low beam headlamps ON.
3 (C1021)	29S-LE15 (OG/BK) high beam headlamp power supply circuit	Greater than 10 volts with the key ON.
4 (C1021) (standard headlamp)	31S-LE16 (BK/RD) low beam headlamp control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM.
4 (C1021) (HID headlamp)	31-LE16 (BK/RD) low beam headlamp ground circuit	0 voltage, less than 5 ohms between the headlamp ground.
6 (C1021)	31S-LE15 (BK/GN) high beam headlamp control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM.
1 (C1041) (standard headlamp)	29S-LE23 (OG/WH) low beam headlamp power supply circuit	Greater than 10 volts with the key ON.
1 (C1041) (HID headlamp)	30S-LE23 (RD/WH) low beam headlamp power supply circuit	0 voltage, less than 5 ohms between the headlamp and the LH HID relay. Greater than 10 volts with the low beam headlamps ON.
3 (C1041)	29S-LE22 (OG/GN) high beam headlamp power supply circuit	Greater than 10 volts with the key ON.
4 (C1041) (standard headlamp)	31S-LE23 (BK/WH) low beam headlamp control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM.
4 (C1041) (HID headlamp)	31-LE23 (BK/WH) low beam headlamp ground circuit	0 voltage, less than 5 ohms between the headlamp ground.
6 (C1041)	31S-LE22 (BK/RD) high beam headlamp control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM.

Headlamp Switch C205

		Normal Condition/Measurement

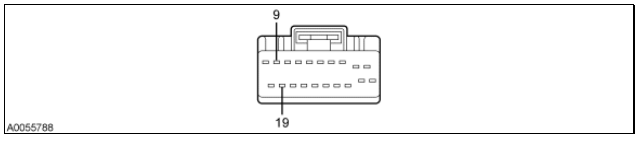
Pin Number(s)	Circuit Designation/Description	
4	10-LE47 (GY/OG) instrument cluster autolamps ON signal	Approximately 5 volts when the SSP relays are energized, less than 5 ohms between headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.
5	8-LF14 (WH/BU) instrument cluster parking lamps ON signal	Approximately 5 volts when the SSP relays are energized, less than 5 ohms between headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.
7	9-LE29 (BN/GN) headlamp switch return signal	0 voltage, less than 5 ohms between the headlamp switch and instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.
9	10-LE21 (GY/OG) instrument cluster headlamps OFF signal	Approximately 5 volts when the SSP relays are energized, less than 5 ohms between headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.
10	8-LE21 (WH/GN) instrument cluster headlamps ON signal	Approximately 5 volts when the SSP relays are energized, less than 5 ohms between headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.

Multifunction Switch C202



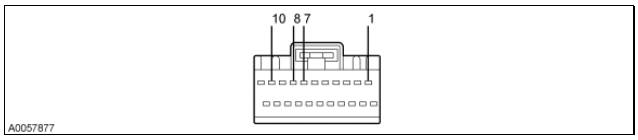
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	9-LG43 (BN/WH) multifunction switch return signal	0 voltage, less than 5 ohms between the multifunction switch and the instrument cluster. Greater than 10,000 ohms between the multifunction switch and ground.
9	8-LE14 (WH/BU) instrument cluster high beam request signal	Approximately 5 volts when the SSP relays are energized, less than 5 ohms between multifunction switch and the instrument cluster. Greater than 10,000 ohms between the multifunction switch and ground.

Instrument Cluster C220b



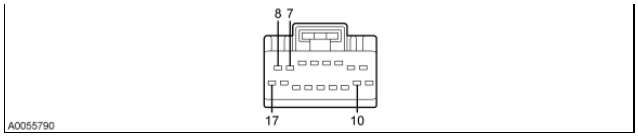
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
9	9-LG43 (BN/WH) multifunction switch return signal	0 voltage, less than 5 ohms between the instrument cluster and the multifunction switch. Greater than 10,000 ohms between the instrument cluster and ground.
19	8-LE14 (WH/BU) instrument cluster high beam request signal	0 voltage, less than 5 ohms between the instrument cluster and the multifunction switch. Greater than 10,000 ohms between the instrument cluster and ground.

Instrument Cluster C220c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	9-LE29 (BN/GN) headlamp switch return signal	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.
7	10-LE21 (GY/OG) instrument cluster headlamps OFF signal	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.
8	8-LF14 (WH/BU) instrument cluster parking lamps ON signal	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.
10	8-LE21 (WH/GN) instrument cluster headlamps ON signal	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.

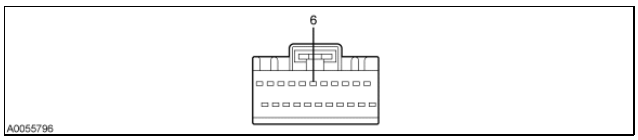
FEM C201a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	31S-LE23 (BK/WH) RH halogen low beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and headlamp. Greater than 10,000

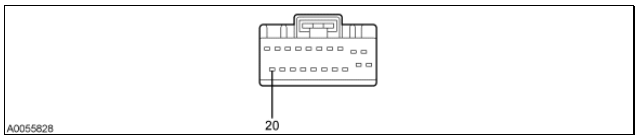
		ohms between the FEM and ground.
8	31S-LE16 (BK/RD) LH halogen low beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and headlamp. Greater than 10,000 ohms between the FEM and ground.
10	31S-LE22 (BK/RD) RH halogen high beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and headlamp. Greater than 10,000 ohms between the FEM and ground.
17	31S-LE15 (BK/GN) LH halogen high beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and headlamp. Greater than 10,000 ohms between the FEM and ground.

FEM C201b



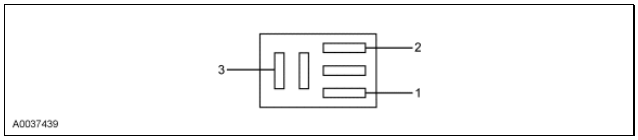
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	91S-LE16 (BN/YE) LH HID low beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and LH HID relay. Greater than 10,000 ohms between the FEM and ground.

FEM C201f



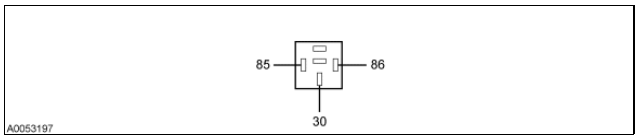
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
20	91S-LE23 (BN/WH) RH HID low beam control ground circuit	Greater than 10 volts with the key ON. Less than 5 ohms between the FEM and RH HID relay. Greater than 10,000 ohms between the FEM and ground.

LH HID Relay C1379, RH HID Relay C1380



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C1379)	29S-LE16 (OG/GN) voltage supply circuit	Greater than 10 volts with the key ON.
2 (C1379)	91S-LE16 (BN/YE) control ground circuit	0 voltage, less than 5 ohms between the HID relay and the FEM.
3 (C1379)	30-LE31 (RD/YE) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
1 (C1380)	29S-LE23 (OG/WH) voltage supply circuit	Greater than 10 volts with the key ON.
2 (C1380)	91S-LE23 (BN/WH) control ground circuit	0 voltage, less than 5 ohms between the HID relay and the FEM.
3 (C1380)	30-LE30 (RD/BU) B+ power supply circuit	Greater than 10 volts with the ignition in any position.

SSP1 Relay, SSP2 Relay, SSP3 Relay, SSP4 Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30 (C441)	30-DG52 (RD/BU) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
85 (C441)	31S-DG51 (BK/YE) relay coil control ground	0 voltage, less than 5 ohms between the relay and the FEM or REM. Less than 5 ohms between the relay and other SSP relays.
86 (C441)	30-DG51 (RD/YE) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
30 (C442)	30-DG54 (RD/GN) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
85 (C442)	31S-DG53 (BK/OG) relay coil control ground	0 voltage, less than 5 ohms between the relay and the FEM or REM. Less than 5 ohms between the relay and other SSP relays.
86 (C442)	30-DG53 (RD/OG) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
30 (C444)	30-DG56 (RD/WH) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
85 (C444)	31S-DG55 (BK/RD) relay coil	0 voltage, less than 5 ohms between the relay and the FEM

	control ground	or REM. Less than 5 ohms between the relay and other SSP relays.
86 (C444)	30-DG55 (RD/BK) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
30 (C445)	30-DG58 (RD/BU) B+ power supply circuit	Greater than 10 volts with the ignition in any position.
85 (C445)	31S-DG57 (BK/YE) relay coil control ground	0 voltage, less than 5 ohms between the relay and the FEM or REM. Less than 5 ohms between the relay and other SSP relays.
86 (C445)	30-DG57 (RD/YE) B+ power supply circuit	Greater than 10 volts with the ignition in any position.

Pinpoint Test A: Both Headlamps Are Inoperative

Normal Operation

The instrument cluster monitors the headlamp switch position by sending out voltage reference signals to the headlamp switch. If a problem is detected with the low beam signal circuit (8-LE21 [GY/OG]), the headlamps off signal circuit (10-LE21 [GY/OG]) or the signal return circuit (9-LE29 [BN/GN]) from the headlamp switch, the instrument cluster will default the headlamps and parking lamps ON. When the headlamp switch is in the headlamps ON position, the instrument cluster sends a signal to the front electronic module (FEM) to illuminate the headlamps.

Possible Causes

- Headlamp switch
- FEM
- Instrument cluster

PINPOINT TEST A: BOTH HEADLAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the knob to the headlamps ON position. • **Does the PID match the headlamp switch position?**	**Yes** GO to A4 . **No** GO to A2 .
A2 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test.	**Yes** GO to A3 . **No** INSTALL a new headlamp switch. REFER to

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	Headlamp Switch in this section. TEST the system for normal operation.
A3 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
A4 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The High Beams Are Inoperative

Normal Operation

The instrument cluster monitors the multifunction switch positions. The instrument cluster sends out a voltage reference signal to the multifunction switch through circuit 8-LE14 (WH/BU). The return signal is sent through circuit 9-LG43 (BN/WH). When the multifunction switch is in the high beam position, the instrument cluster sends a signal to the front electronic module (FEM) to illuminate the high beams. If a problem is detected with the circuits to the multifunction switch, the instrument cluster will not send a signal to the FEM to illuminate the high beams.

Possible Causes

- Circuit 8-LE14 (WH/BU) open, shorted to ground or shorted to power
- Circuit 9-LG43 (BN/WH) open, shorted to ground or shorted to power
- Multifunction switch
- FEM
- Instrument cluster

PINPOINT TEST B: THE HIGH BEAMS ARE INOPERATIVE

Test Step	Result / Action to Take

B1 MONITOR THE INSTRUMENT CLUSTER HIGH BEAM INPUT STATUS PID	
• Key in ON position. • Connect the diagnostic tool. • Monitor the instrument cluster high beam input status PID while moving the multifunction switch from the low beam position to the high beam positions. • **Does the PID agree with the positions of the multifunction switch?**	**Yes** GO to B8 . **No** GO to B2 .
B2 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the multifunction switch OK?**	**Yes** GO to B3 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
B3 CHECK CIRCUIT 8-LE14 (WH/BU) FOR A SHORT TO POWER	
• Disconnect: Instrument Cluster C220b. • Key in ON position. • Measure the voltage between instrument cluster C220b-19, circuit 8-LE14 (WH/BU), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. **No** GO to B4 .
B4 CHECK CIRCUIT 8-LE14 (WH/BU) FOR AN OPEN OR SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between instrument cluster C220b-19, circuit 8-LE14 (WH/BU), harness side and ground; and between instrument cluster C220b-19, circuit 8-LE14 (WH/BU), harness side and multifunction switch C202-9, circuit 8-LE14 (WH/BU), harness side.  • **Is the resistance greater than 10,000 ohms between the instrument cluster and ground; and less than 5 ohms**	**Yes** GO to B5 . **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

between the instrument cluster and the multifunction switch?	
B5 CHECK CIRCUIT 9-LG43 (BN/WH) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between instrument cluster C220b-9, circuit 9-LG43 (BN/WH), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. **No** GO to B6 .
B6 CHECK CIRCUIT 9-LG43 (BN/WH) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between instrument cluster C220b-9, circuit 9-LG43 (BN/WH), harness side and ground; and between instrument cluster C220b-9, circuit 9-LG43 (BN/WH), harness side and multifunction switch C202-8, circuit 9-LG43 (BN/WH), harness side.  • **Is the resistance greater than 10,000 ohms between the instrument cluster and ground; and less than 5 ohms between the instrument cluster and multifunction switch?**	**Yes** GO to B7 . **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.
B7 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
B8 CHECK FEM OPERATION	
• Key in OFF position.	**Yes** INSTALL a new FEM.

• Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: One Low Beam Headlamp Is Inoperative

Normal Operation Standard Headlamps

The LH low beam receives power through circuit 29S-LE16 (OG/GN). Ground for the LH low beam is provided through circuit 31S-LE16 (BK/RD). The RH low beam receives power through circuit 29S-LE23 (OG/WH). Ground for the RH low beam is provided through circuit 31S-LE23 (BK/WH). The front electronic module (FEM) controls the ground for both low beam headlamps.

Normal Operation High Intensity Discharge (HID) Headlamps

The LH HID relay coil receives power through circuit 29S-LE16 (OG/GN). Ground for the LH HID relay coil is provided through circuit 91S-LE16 (BN/YE) and is controlled by the FEM. Battery voltage is supplied to the LH HID relay through circuit 30-LE31 (RD/YE). When the relay is energized, voltage is switched to the LH ballast through circuit 30S-LE16 (OG/GN). Circuit 31-LE16 (BK/RD) supplies ground to the LH ballast. The RH HID relay coil receives power through circuit 29S-LE23 (OG/WH). Ground for the RH HID relay coil is provided through circuit 91S-LE23 (BN/WH) and is controlled by the FEM. Battery voltage is supplied to the RH HID relay through circuit 30-LE30 (RD/BU). When the relay is energized, voltage is switched to the RH ballast through circuit 30S-LE23 (OG/WH). Circuit 31-LE23 (BK/WH) supplies ground to the RH ballast. The FEM controls the ground for both HID relay coils. The ballasts provide the necessary voltage to power the HID bulbs. The ballast and HID bulb are replaced as an assembly.

Possible Causes

- Circuit 29S-LE16 (OG/GN) (LH headlamp) open
- Circuit 29S-LE23 (OG/WH) (RH headlamp) open
- Circuit 31S-LE16 (BK/RD) (LH halogen headlamp) open or shorted to power
- Circuit 31S-LE23 (BK/WH) (RH halogen headlamp) open or shorted to power
- Circuit 91S-LE16 (BN/YE) (LH HID relay) open or shorted to power
- Circuit 91S-LE23 (BN/WH) (RH HID relay) open or shorted to power
- Circuit 30-LE31 (RD/YE) (LH HID relay) open
- Circuit 30-LE30 (RD/BU) (RH HID relay) open
- Circuit 30S-LE16 (OG/GN) (LH HID headlamp) open
- Circuit 30S-LE23 (OG/WH) (RH HID headlamp) open
- Circuit 31-LE16 (BK/RD) (LH HID headlamp) open
- Circuit 31-LE23 (BK/WH) (RH HID headlamp) open
- HID relay
- Ballast and HID bulb
- FEM

PINPOINT TEST C: ONE LOW BEAM HEADLAMP IS INOPERATIVE

Test Step	Result / Action to Take
C1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH HID LIGHTING	
• Check the vehicle for HID headlamps. • **Is the vehicle equipped with HID headlamps?**	**Yes** GO to C7 . **No** GO to C2 .
C2 RETRIEVE THE FEM DIAGNOSTIC TROUBLE CODES (DTCs)	
NOTE: Make sure the headlamp switch is in the OFF position. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Carry out the FEM on-demand self-test. • **Are any DTCs present?**	**Yes** If DTC B1794, GO to C4 . All others, REFER to the FEM Diagnostic Trouble Code (DTC) index for correct diagnostics. **No** GO to C3 .
C3 CHECK CIRCUIT 31S-LE16 (BK/RD) (LH LOW BEAM) OR CIRCUIT 31S-LE23 (BK/WH) (RH LOW BEAM) FOR SHORT TO POWER	
• Key in OFF position. • Disconnect: FEM C201a. • Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Key in ON position. • Measure the voltage between FEM C201a-8, circuit 31S-LE16 (BK/RD) (LH headlamp), harness side and ground; or between FEM C201a-7, circuit 31S-LE23 (BK/WH) (RH headlamp), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to C13 .
C4 CHECK CIRCUIT 29S-LE16 (OG/GN) (LH LOW BEAM) OR CIRCUIT 29S-LE23 (OG/WH) (RH LOW BEAM) FOR AN OPEN (HALOGEN HEADLAMP)	
• Key in OFF position. • Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Key in ON position. • Measure the voltage between LH headlamp C1021-1, circuit 29S-LE16 (OG/GN), harness side and ground; or between RH headlamp C1041-1, circuit 29S-LE23 (OG/WH), harness side and	**Yes** GO to C5 . **No** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal

ground.  • **Is the voltage greater than 10 volts?**	operation.
C5 CHECK CIRCUIT 31S-LE16 (BK/RD) (LH LOW BEAM) OR CIRCUIT 31S-LE23 (BK/WH) (RH LOW BEAM) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201a. • Measure the resistance between FEM C201a-8, circuit 31S-LE16 (BK/RD), harness side and LH headlamp C1021-4, circuit 31S-LE16 (BK/RD), harness side; or between FEM C201a-7, circuit 31S-LE23 (BK/WH), harness side and RH headlamp C1041-4, circuit 31S-LE23 (BK/WH), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C6 . **No** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation.
C6 CHECK THE HEADLAMP ASSEMBLY	
• Connect: LH Headlamp C1021 or RH Headlamp C1041. • Connect a fused (10A) jumper wire between FEM C201a-8, circuit 31S-LE16 (BK/RD) (LH headlamp), harness side and ground; or between FEM C201a-7, circuit 31S-LE23 (BK/WH) (RH headlamp), harness side and ground.  • Key in ON position. • **Does the inoperative low beam now illuminate?**	**Yes** GO to C13 . **No** REPAIR or INSTALL a new headlamp assembly. REFER to Headlamp Assembly in this section. TEST the system for normal operation.
C7 CHECK CIRCUIT 91S-LE16 (BN/YE) (LH LOW BEAM) OR CIRCUIT 91S-LE23 (BN/WH) (RH LOW BEAM) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: FEM C201b or C201f. • Disconnect: LH HID Relay C1379 or RH HID Relay C1380. • Key in ON position.	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No**

• Measure the voltage between FEM C201b-6, circuit 91S-LE16 (BN/YE) (LH headlamp), harness side and ground; or between FEM C201f-20, circuit 91S-LE23 (BN/WH) (RH headlamp), harness side and ground.  A0056739 • **Is any voltage present?**	GO to C8 .
C8 CHECK CIRCUIT 91S-LE16 (BN/YE) (LH LOW BEAM) OR CIRCUIT 91S-LE23 (BN/WH) (RH LOW BEAM) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between FEM C201b-6, circuit 91S-LE16 (BN/YE), harness side and LH HID relay C1379-2, circuit 91S-LE16 (BN/YE), harness side; or between FEM C201f-20, circuit 91S-LE23 (BN/WH), harness side and RH HID relay C1380-2, circuit 91S-LE23 (BN/WH), harness side.  A0056740 • **Is the resistance less than 5 ohms?**	**Yes** GO to C9 . **No** REPAIR the circuit in question. TEST the system for normal operation.
C9 CHECK CIRCUIT 29S-LE16 (OG/GN) (LH LOW BEAM) OR CIRCUIT 29S-LE23 (OG/WH) (RH LOW BEAM) FOR AN OPEN (HID HEADLAMP)	
• Key in ON position. • Measure the voltage between LH HID relay C1379-1, circuit 29S-LE16 (OG/GN), harness side and ground; or between RH HID relay C1380-1, circuit 29S-LE23 (OG/WH), harness side and ground.  GN1458-A • **Is the voltage greater than 10 volts?**	**Yes** GO to C10 . **No** REPAIR the circuit in question. TEST the system for normal operation.
C10 CHECK THE HID RELAY	
• Carry out the HID relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information.	**Yes** GO to C11 . **No** INSTALL a new HID relay.

• **Is the HID relay OK?**	TEST the system for normal operation.
C11 CHECK CIRCUIT 30-LE31 (RD/YE) (LH LOW BEAM) OR CIRCUIT 30-LE30 (RD/BU) (RH LOW BEAM) FOR AN OPEN (HID HEADLAMP)	
• Key in OFF position. • Measure the voltage between LH HID relay C1379-3, circuit 30-LE31 (RD/YE), harness side and ground; or between RH HID relay C1380-3, circuit 30-LE30 (RD/BU), harness side and ground.  GN1456-A • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to C12 .
C12 CHECK THE FEM	
• Connect: LH HID Relay C1379 or RH HID Relay C1380. • Connect a fused (10A) jumper wire between FEM C201b-6, circuit 91S-LE16 (BN/YE) (LH headlamp), harness side and ground; or between FEM C201f-20, circuit 91S-LE23 (BN/WH) (RH headlamp), harness side and ground.  A0056741 • Key in ON position. • **Does the inoperative low beam now illuminate?**	**Yes** REMOVE the jumper wire. GO to C13 . **No** REMOVE the jumper wire. GO to C14 .
C13 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
C14 CHECK CIRCUIT 30S-LE16 (RD/BK) (LH LOW BEAM) OR CIRCUIT 30S-LE23 (RD/WH) (RH LOW BEAM) FOR AN OPEN	

• Key in OFF position. • Connect: FEM C201a. • Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Place the headlamp switch in the headlamps ON position. • Measure the voltage between LH headlamp C1021-1, circuit 30S-LE16 (RD/BK), harness side and ground; or between RH headlamp C1041-1, circuit 30S-LE23 (RD/WH), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** TURN the headlamp switch OFF. GO to C15 . **No** REPAIR the circuit in question. TEST the system for normal operation.
C15 CHECK CIRCUIT 31-LE16 (BK/RD) (LH LOW BEAM) OR CIRCUIT 31-LE23 (BK/WH) (RH LOW BEAM) FOR AN OPEN	
• Measure the resistance between LH headlamp C1021-4, circuit 31-LE16 (BK/RD), harness side and ground; or between RH headlamp C1041-4, circuit 31-LE23 (BK/WH), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new ballast. REFER to Headlamp Assembly in this section. TEST the system for normal operation. **No** REPAIR the circuit in question. TEST the system for normal operation.

Pinpoint Test D: One High Beam Headlamp Is Inoperative

Normal Operation

The LH high beam receives power through circuit 29S-LE15 (OG/BK). Ground for the LH low beam is provided through circuit 31S-LE15 (BK/GN). The RH high beam receives power through circuit 29S-LE22 (OG/GN). Ground for the RH low beam is provided through circuit 31S-LE22 (BK/GN). The front electronic module (FEM) controls the ground for both high beam headlamps.

Possible Causes

- Circuit 29S-LE15 (OG/BK) (LH headlamp) open
- Circuit 29S-LE22 (OG/GN) (RH headlamp) open
- Circuit 31S-LE15 (BK/GN) (LH headlamp) open or short to power
- Circuit 31S-LE22 (BK/RD) (RH headlamp) open or short to power
- FEM

PINPOINT TEST D: ONE HIGH BEAM HEADLAMP IS INOPERATIVE

Test Step	Result / Action to Take
D1 RETRIEVE THE FEM DIAGNOSTIC TROUBLE CODES (DTCs)	
NOTE: Make sure the headlamp switch is in the OFF position. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Carry out the FEM on-demand self-test. • **Are any DTCs present?**	**Yes** If DTC B1567, GO to D3 . All others, REFER to the FEM Diagnostic Trouble Code (DTC) index for correct diagnostics. **No** GO to D2 .
D2 CHECK CIRCUIT 31S-LE15 (BK/GN) OR CIRCUIT 31S-LE22 (BK/GN) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: FEM C201a. • Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Key in ON position. • Measure the voltage between FEM C201a-17, circuit 31S-LE15 (BK/GN) (LH headlamp), harness side and ground; or between FEM C201a-10, circuit 31S-LE22 (BK/RD) (RH headlamp), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to D6 .
D3 CHECK CIRCUIT 29S-LE15 (OG/BK) OR CIRCUIT 29S-LE22 (OG/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Key in ON position. • Measure the voltage between LH headlamp C1021-3, circuit 29S-LE15 (OG/BK), harness side and ground; or between RH headlamp C1041-3, circuit 29S-LE22 (OG/GN), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to D4 . **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

D4 CHECK CIRCUIT 31S-LE15 (BK/GN) OR CIRCUIT 31S-LE22 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201c. • Measure the resistance between LH headlamp C1021-6, circuit 31S-LE15 (BK/GN), harness side and FEM C201a-17, circuit 31S-LE15 (BK/GN), harness side; or RH headlamp C1041-6, circuit 31S-LE22 (BK/RD), harness side and FEM C201a-10, circuit 31S-LE22 (BK/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to D5 . **No** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.
D5 CHECK THE HEADLAMP ASSEMBLY	
• Key in OFF position. • Connect: LH Headlamp C1021 or RH Headlamp C1041. • Key in ON position. • Connect a fused (10A) jumper wire between FEM C201a-17, circuit 31S-LE15 (OG/BK), harness side and ground; or between the FEM C201a-10, circuit 31S-LE22 (OG/GN), harness side and ground.  • **Does the inoperative headlamp now illuminate?**	**Yes** GO to D6 . **No** REPAIR or INSTALL a new headlamp assembly. REFER to Headlamp Assembly in this section. CLEAR the DTCs. TEST the system for normal operation.
D6 CHECK FOR FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: The Headlamps Are ON Continuously

Normal Operation

The instrument cluster monitors the headlamp switch position. When the headlamp switch is in the headlamps ON position, the instrument cluster sends a signal to the front electronic module (FEM) to illuminate the headlamps. If a problem is detected with the circuits to the headlamp switch, the instrument cluster will default the headlamps ON. The FEM controls the ground circuit for each halogen bulb and high intensity discharge (HID) relay (if equipped). If a problem is detected with any of the signal circuits to the headlamp switch, the instrument cluster will default the parking lamps and headlamps ON. The FEM controls the ground for the headlamp bulbs (and the HID relays if equipped).

Possible Causes

- Circuit 31S-LE16 (BK/RD) (LH halogen low beam) short to ground
- Circuit 31S-LE23 (BK/WH) (RH halogen low beam) short to ground
- Circuit 91S-LE16 (BN/YE) (LH HID relay) short to ground
- Circuit 91S-LE23 (BN/WH) (RH HID relay) short to ground
- Circuit 31S-LE15 (BK/GN) (LH halogen high beam) short to ground
- Circuit 31S-LE22 (BK/RD) (RH halogen high beam) short to ground
- Circuit 8-LE21 (WH/GN) open, short to power or short to ground
- Circuit 8-LF14 (WH/BU) open, short to power or short to ground
- Circuit 9-LE29 (BN/GN) open or short to power
- Circuit 10-LE21 (GY/OG) open, short to power or short to ground
- Circuit 10-LE47 (GY/OG) short to ground
- HID relay
- Headlamp switch
- Instrument cluster
- FEM
- Headlamp
- Multifunction switch

PINPOINT TEST E: THE HEADLAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
E1 DETERMINE THE ALWAYS ON HEADLAMP(S)	
NOTE: Make sure the multifunction switch is in the low beam position. • Key in ON position. • Place the headlamp switch in the OFF position. • Observe the headlamps. • **Is only one lamp illuminated?**	**Yes** GO to E2 . **No** GO to E10 .
E2 RETRIEVE THE FEM DIAGNOSTIC TROUBLE CODES (DTCs)	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Carry out the FEM on-demand self-test. • **Are any DTCs present?**	**Yes** If DTC B1567, GO to E3 . If DTC B1794, GO to E5 . All others, REFER to the FEM Diagnostic Trouble Code (DTC) index for correct diagnostics.

	No If not equipped with HID headlamps, GO to E24 . If equipped with HID headlamps, GO to E7 .
E3 CHECK THE FEM (HIGH BEAM)	
• Key in OFF position. • Disconnect: FEM C201a. • **Does the LH or RH high beam continue to illuminate?**	**Yes** GO to E4 . **No** GO to E24 .
E4 CHECK CIRCUIT 31S-LE15 (BK/GN) OR 31S-LE22 (BK/RD) FOR A SHORT TO GROUND	
• Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Measure the resistance between LH headlamp C1021-6, circuit 31S-LE15 (BK/GN), harness side and ground; or between RH headlamp C1041-6, circuit 31S-LE22 (BK/RD), harness side and ground.  A0056747 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation. **No** REPAIR or INSTALL a new headlamp assembly. REFER to Headlamp Assembly in this section. TEST the system for normal operation.
E5 CHECK THE FEM (HALOGEN LOW BEAM)	
• Key in OFF position. • Disconnect: FEM C201a. • **Does the LH or RH low beam continue to illuminate?**	**Yes** GO to E6 . **No** GO to E24 .
E6 CHECK CIRCUIT 31S-LE16 (BK/RD) OR 31S-LE23 (BK/WH) FOR A SHORT TO GROUND	
• Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Measure the resistance between LH headlamp C1021-4, circuit 31S-LE16 (BK/RD), harness side and ground; or between RH headlamp C1041-4, circuit 31S-LE23 (BK/WH), harness side and ground.  A0062681 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation. **No** REPAIR or INSTALL a new headlamp assembly. REFER to Headlamp Assembly in this section. TEST the system for normal operation.
E7 CHECK THE FEM (HID LOW BEAM)	

• Key in OFF position. • Disconnect: FEM C201a. • **Does the LH or RH low beam continue to illuminate?**	**Yes** GO to E8 . **No** GO to E24 .
E8 CHECK CIRCUIT 91S-LE16 (BN/YE) OR CIRCUIT 91S-LE23 (BN/WH) FOR A SHORT TO GROUND	
• Disconnect: LH HID Relay C1379 or RH HID Relay C1380. • Measure the resistance between LH HID relay C1379-2, circuit 91S-LE16 (BN/YE), harness side and ground; or between RH HID relay C1380-2, circuit 91S-LE23 (BN/WH), harness side and ground  GN1455-A • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to E9 .
E9 CHECK THE HID RELAY	
• Carry out the HID relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the HID relay OK?**	**Yes** REPAIR circuit 30S-LE16 (RD/BK) (LH headlamp) or circuit 30S-LE23 (RD/WH) (RH headlamp). TEST the system for normal operation. **No** INSTALL a new HID relay. TEST the system for normal operation.
E10 DETERMINE IF LOW BEAMS OR HIGH BEAMS ARE ILLUMINATED	
• Key in OFF position. • Observe the headlamps. • **Are the high beam headlamps illuminated?**	**Yes** GO to E11 . **No** GO to E12 .
E11 MONITOR THE HIGH BEAM STATUS	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster high beam input status PID while moving the multifunction switch from the low beam to high beam positions. • **Does the PID agree with the positions of the multifunction switch?**	**Yes** GO to E24 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
E12 MONITOR THE HEADLAMP SWITCH STATUS	

• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the knob from the OFF position to the headlamps ON position. • **Does the PID agree with the positions of the headlamp switch?**	**Yes** GO to E24 . **No** GO to E13 .
E13 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to E14 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
E14 CHECK CIRCUIT 8-LE21 (WH/GN) FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between headlamp switch C205-10, circuit 8-LE21 (WH/GN), harness side and instrument cluster C220c-10, circuit 8-LE21 (WH/GN), harness side; and between headlamp switch C205-10, circuit 8-LE21 (WH/GN), harness side and ground.  A0056750 • **Is the resistance less than 5 ohms between the headlamp switch and the instrument cluster; and greater than 10,000 ohms between the headlamp switch and ground?**	**Yes** GO to E15 . **No** REPAIR the circuit. TEST the system for normal operation.
E15 CHECK CIRCUIT 8-LE21 (WH/GN) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between headlamp switch C205-10, circuit 8-LE21 (WH/GN), harness side and ground.  A0057871 • **Is the any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E16 .

E16 CHECK CIRCUIT 8-LF14 (WH/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between headlamp switch C205-5, circuit 8-LF14 (WH/BU), harness side and instrument cluster C220c-8, circuit 8-LF14 (WH/BU), harness side; and between headlamp switch C205-5, circuit 8-LF14 (WH/BU), harness side and ground.  A0057872 • **Is the resistance less than 5 ohms between the headlamp switch and the instrument cluster; and greater than 10,000 ohms between the headlamp switch and ground?**	**Yes** GO to E17 . **No** REPAIR the circuit. TEST the system for normal operation.
E17 CHECK CIRCUIT 8-LF14 (WH/BU) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between headlamp switch C205-5, circuit 8-LF14 (WH/BU), harness side and ground.  A0057873 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E18 .
E18 CHECK CIRCUIT 10-LE21 (GY/OG) FOR AN OPEN OR SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between headlamp switch C205-9, circuit 10-LE21 (GY/OG), harness side and instrument cluster C220c-7, circuit 10-LE21 (GY/OG), harness side; and between headlamp switch C205-9, circuit 10-LE21 (GY/OG), harness side and ground.  A0057874 • **Is the resistance less than 5 ohms between the headlamp switch and the instrument cluster; and greater than 10,000 ohms between the headlamp switch and ground?**	**Yes** GO to E19 . **No** REPAIR the circuit. TEST the system for normal operation.

E19 CHECK CIRCUIT 10-LE21 (GY/OG) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between headlamp switch C205-9, circuit 10-LE21 (GY/OG), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E20 .
E20 CHECK CIRCUIT 10-LE47 (GY/OG) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between headlamp switch C205-4, circuit 10-LE47 (GY/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E21 .
E21 CHECK CIRCUIT 9-LE29 (BN/GN) FOR AN OPEN	
• Measure the resistance between headlamp switch C205-7, circuit 9-LE29 (BN/GN), harness side and instrument cluster C220c-1, circuit 9-LE29 (BN/GN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to E22 . **No** REPAIR the circuit. TEST the system for normal operation.
E22 CHECK CIRCUIT 9-LE29 (BN/GN) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between headlamp switch C205-7, circuit 9-LE29 (BN/GN), harness side ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E23 .

 • **Is any voltage present?**	
E23 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
E24 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Power Supply Relay Is Inoperative All Switched System Power (SSP) Features

Normal Operation

Battery voltage is supplied to the SSP relays through the battery junction box (BJB). Ground for the SSP relay coils is controlled by the front electronic module (FEM) and the rear electronic module (REM) through the following circuits: 31S-DG51 (BK/YE), 31S-DG55 (BK/RD), 31S-DG57 (BK/YE), 31S-DG53 (BK/OG), 31S-DK21 (BK/WH) and 31S-DK30 (BK/OG). All of these circuits are spliced together so that either the FEM or the REM can ground this circuit and energize the SSP relays.

Possible Causes

- Circuit 31S-DG51 (BK/YE) short to power
- Circuit 31S-DG55 (BK/RD) short to power
- Circuit 31S-DG57 (BK/YE) short to power
- Circuit 31S-DG53 (BK/OG) short to power
- Circuit 31S-DK21 (BK/WH) short to power
- Circuit 31S-DK30 (BK/OG) short to power
- SSP relay

- BJB
- FEM
- REM

PINPOINT TEST F: THE POWER SUPPLY RELAY IS INOPERATIVE ALL SWITCHED SYSTEM POWER (SSP) FEATURES

NOTE: The ignition switch must be cycled from OFF to ON to enable the SSP feature.

NOTE: Refer to Principles of Operation and the SSP Relay Index for complete detail of SSP-powered features.

Test Step	Result / Action to Take
F1 CHECK THE BJB	
• Key in OFF position. • Disconnect: SSP1 Relay C441. • Measure the voltage between SSP1 relay C441-86, circuit 30-DG51 (RD/YE), harness side and ground.  A0056752 • **Is the voltage greater than 10 volts?**	**Yes** GO to F2 . **No** REPAIR or INSTALL a new BJB. TEST the system for normal operation.
F2 CHECK THE CONTROL GROUND CIRCUIT FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between SSP1 relay C441-85, circuit 31S-DG51 (BK/YE), harness side and ground.  A0056753 • **Is the voltage greater than 10 volts?**	**Yes** GO to F4 . **No** GO to F3 .
F3 CHECK FOR GROUND ON CIRCUIT 31S-DG51 (BK/YE)	
• Measure the resistance between SSP1 relay C441-85, circuit 31S-DG51 (BK/YE), harness side and ground.	**Yes** INSTALL a new SSP1 relay. TEST the system for normal operation. **No** REPAIR the circuit between the SSP relays

 A0056754 • **Is the resistance less than 5 ohms?**	and the electronic modules. TEST the system for normal operation.
F4 CHECK THE SSP RELAY(S)	
• Disconnect: SSP2 Relay C442. • Disconnect: SSP3 Relay C444. • Disconnect: SSP4 Relay C445. • Carry out the relay component test on each SSP relay; Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does each relay pass the component test?**	**Yes** GO to F5 . **No** INSTALL a new SSP relay. TEST the system for normal operation.
F5 CHECK THE FEM FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: FEM C201b. • Key in ON position. • Measure the voltage between SSP1 relay C441-85, circuit 31S-DG51 (BK/YE), harness side and ground.  A0056753 • **Is the voltage greater than 10 volts?**	**Yes** GO to F6 . **No** GO to F7 .
F6 CHECK THE REM FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: REM C420b. • Key in ON position. • Measure the voltage between SSP1 relay C441-85, circuit 31S-DG51 (BK/YE), harness side and ground.  A0056753 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the SSP ground control circuit. TEST the system for normal operation. **No** GO to F8 .

F7 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
F8 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test G: The Power Supply Relay Is Inoperative Switched System Power (SSP) 1

Normal Operation

Battery voltage is supplied to the SSP1 relay through battery junction box (BJB) fuse 27 (30A). Ground for the relay coil is controlled by the front electronic module (FEM) and the rear electronic module (REM) through circuit 31S-DG51 (BK/YE). When the SSP1 relay is energized, battery voltage is switched from the BJB to circuit 30-DD3 (RD/OG).

Possible Causes

- Circuit 31S-DG51 (BK/YE) open
- Circuit 30-DD3 (RD/OG) open
- BJB
- SSP1 relay

PINPOINT TEST G: THE POWER SUPPLY RELAY IS INOPERATIVE SWITCHED SYSTEM POWER (SSP) 1

NOTE: The ignition switch must be cycled from OFF to ON to enable the SSP feature.

NOTE: Refer to Exterior Lighting and the SSP Relay Index for complete details of SSP1 powered features.

Test Step	Result / Action to Take
G1 CHECK THE BATTERY JUNCTION BOX (BJB)	

• Key in OFF position. • Disconnect: SSP1 Relay C441. • Measure the voltage between SSP1 relay C441-86, circuit 30-DG51 (RD/YE), harness side and ground; and between SSP1 relay C441-30, circuit 30-DG52 (RD/BU), harness side and ground.  A0062031 • **Are the voltages greater than 10 volts?**	**Yes** GO to G2 . **No** REPAIR or INSTALL a new BJB. TEST the system for normal operation.
G2 CHECK CIRCUIT 31S-DG51 (BK/YE) FOR AN OPEN	
• Key in ON position. • Measure the resistance between SSP1 relay C441-85, circuit 31S-DG51 (BK/YE), harness side and ground.  A0056754 • **Is the resistance less than 5 ohms?**	**Yes** GO to G3 . **No** REPAIR the circuit. TEST the system for normal operation.
G3 CHECK THE SSP1 RELAY	
• Carry out the SSP1 relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the SSP1 relay OK?**	**Yes** REPAIR circuit 30-DD3 (RD/OG). **No** INSTALL a new SSP1 relay. TEST the system for normal operation.

Pinpoint Test H: The Power Supply Relay Is Inoperative Switched System Power (SSP) 2

Normal Operation

Battery voltage is supplied to the SSP2 relay through battery junction box (BJB) fuse 32 (30A). Ground for the relay coil is controlled by the front electronic module (FEM) and rear electronic module (REM) through circuit 31S-DG53 (BK/OG). When the SSP2 relay is energized, battery voltage is switched from the BJB to circuit 30-DD2 (RD/BU).

Possible Causes

- Circuit 31S-DG53 (BK/OG) open
- Circuit 30-DD2 (RD/BU) open
- BJB
- SSP2 relay

PINPOINT TEST H: THE POWER SUPPLY RELAY IS INOPERATIVE SWITCHED SYSTEM POWER (SSP) 2

NOTE: The ignition switch must be cycled from OFF to ON to enable the SSP feature.

NOTE: Refer to Exterior Lighting and the SSP Relay Index for complete details of SSP1 powered features.

Test Step	Result / Action to Take
H1 CHECK THE BATTERY JUNCTION BOX (BJB)	
• Key in OFF position. • Disconnect: SSP2 Relay C442. • Measure the voltage between SSP2 relay C442-86, circuit 30-DG53 (RD/OG), harness side and ground; and between SSP2 relay C442-30, circuit 30-DG54 (RD/GN), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to H2 . **No** REPAIR or INSTALL a new BJB. TEST the system for normal operation.
H2 CHECK CIRCUIT 31S-DG53 (BK/OG) FOR AN OPEN	
• Key in ON position. • Measure the resistance between SSP2 relay C442-85, circuit 31S-DG53 (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to H3 . **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK THE SSP2 RELAY	
• Carry out the SSP2 relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the SSP2 relay OK?**	**Yes** REPAIR circuit 30-DD2 (RD/BU). **No** INSTALL a new SSP2 relay. TEST the system for normal operation.

Pinpoint Test I: The Power Supply Relay Is Inoperative Switched System Power (SSP) 3

Normal Operation

Battery voltage is supplied to the SSP3 relay through battery junction box (BJB) fuse 24 (30A). Ground for the relay coil is controlled by the front electronic module (FEM) and rear electronic module (REM) through circuit 31S-DG55 (BK/RD). When the SSP3 relay is energized, battery voltage is switched from the BJB to circuit 30S-DB15 (RD/OG).

Possible Causes

- Circuit 31S-DG55 (BK/RD) open
- Circuit 30S-DB15 (RD/OG) open
- BJB
- SSP3 relay

PINPOINT TEST I: THE POWER SUPPLY RELAY IS INOPERATIVE SWITCHED SYSTEM POWER (SSP) 3

NOTE: The ignition switch must be cycled from OFF to ON to enable the SSP feature.

NOTE: Refer to Exterior Lighting and the SSP Relay Index for complete details of SSP1 powered features.

Test Step	Result / Action to Take
I1 CHECK THE BATTERY JUNCTION BOX (BJB)	
• Key in OFF position. • Disconnect: SSP3 Relay C444. • Measure the voltage between SSP3 relay C444-86, circuit 30-DG55 (RD/BK), harness side and ground; and between SSP3 relay C444-30, circuit 30-DG56 (RD/WH), harness side and ground.  A0062031 • **Are the voltages greater than 10 volts?**	**Yes** GO to I2 . **No** REPAIR or INSTALL a new BJB. TEST the system for normal operation.
I2 CHECK CIRCUIT 31S-DG55 (BK/RD) FOR AN OPEN	
• Key in ON position. • Measure the resistance between SSP3 relay C444-85, circuit 31S-DG55 (BK/RD), harness side and ground.  A0056754 • **Is the resistance less than 5 ohms?**	**Yes** GO to I3 . **No** REPAIR the circuit. TEST the system for normal operation.
I3 CHECK THE SSP3 RELAY	
• Carry out the SSP3 relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the SSP3 relay OK?**	**Yes** REPAIR circuit 30S-DB15 (RD/OG). **No** INSTALL a new SSP3 relay. TEST the system for normal operation.

Pinpoint Test J: The Power Supply Relay Is Inoperative Switched System Power (SSP) 4

Normal Operation

Battery voltage is supplied to the SSP4 relay through battery junction box (BJB) fuse 23 (30A). Ground for the relay coil is controlled by the front electronic module (FEM) and rear electronic module (REM) through circuit 31S-DG57 (BK/YE). When the SSP4 relay is energized, battery voltage is switched from the BJB to circuit 30S-DB16 (RD/GN).

Possible Causes

- Circuit 31S-DG57 (BK/YE) open
- Circuit 30S-DB16 (RD/GN) open
- BJB
- SSP4 relay

PINPOINT TEST J: THE POWER SUPPLY RELAY IS INOPERATIVE SWITCHED SYSTEM POWER (SSP) 4

NOTE: The ignition switch must be cycled from OFF to ON to enable the SSP feature.

NOTE: Refer to Exterior Lighting and the SSP Relay Index for complete details of SSP1 powered features.

Test Step	Result / Action to Take
J1 CHECK THE BATTERY JUNCTION BOX (BJB)	
• Key in OFF position. • Disconnect: SSP4 Relay C445. • Measure the voltage between SSP4 relay C445-86, circuit 30-DG57 (RF/YE), harness side and ground; and between SSP4 relay C445-30, circuit 30-DG58 (RD/BU), harness side and ground.  A0062031 • **Are the voltages greater than 10 volts?**	**Yes** GO to J2 . **No** REPAIR or INSTALL a new BJB. TEST the system for normal operation.
J2 CHECK CIRCUIT 31S-DG57 (BK/YE) FOR AN OPEN	
• Key in ON position. • Measure the resistance between SSP4 relay C445-85, circuit 31S-DG57 (BK/YE), harness side and ground.  A0056754 • **Is the resistance less than 5 ohms?**	**Yes** GO to J3 . **No** REPAIR the circuit. TEST the system for normal operation.

J3 CHECK THE SSP4 RELAY	
• Carry out the SSP4 relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the SSP4 relay OK?**	**Yes** REPAIR circuit 30S-DB16 (RD/GN). **No** INSTALL a new SSP4 relay. TEST the system for normal operation.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Headlamp switch	• Circuitry • Photocell • Instrument cluster

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.
5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.
6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:

- SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
- No response/not equipped for instrument cluster, refer to Section 418-00 .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the instrument cluster.

7. If the DTCs retrieved are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

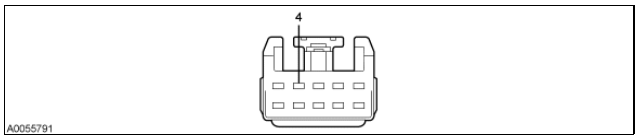
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	Instrument cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01 .
B1470	Lamp Headlamp Input Circuit Failure	Instrument cluster	Go To Pinpoint Test E .

Symptom Chart

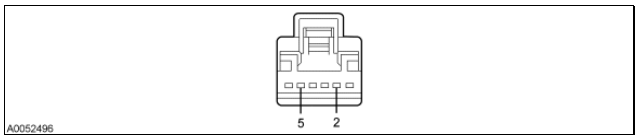
Symptom Chart
Connector Circuit Reference

Headlamp Switch C205



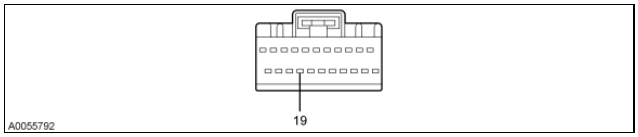
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	10-LE47 (GY/OG) autolamps ON input circuit	Less than 5 ohms between the headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.

Photocell C286



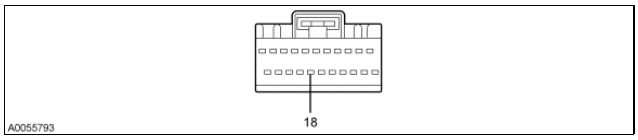
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	8-LE42 (WH/BU) photocell input circuit	Less than 5 ohms between the photocell and the instrument cluster. Greater than 10,000 ohms between the photocell and ground.
5	31-LE42 (BK/OG) photocell ground circuit	0 voltage, less than 5 ohms between the photocell and ground.

Instrument Cluster C220a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
19	8-LE42 (WH/BU) photocell input circuit	0 voltage, less than 5 ohms between the instrument cluster and ground.

Instrument Cluster C220c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
18	10-LE47 (GY/OG) autolamps ON input circuit	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.

Pinpoint Test K: The Autolamps Are Inoperative

Normal Operation

The instrument cluster monitors the autolamps ON signal circuit to the headlamp switch through circuit 10-LE47 (GY/OG). When the headlamp switch is turned to the autolamps ON position, the signal is returned through circuit 9-LE29 (BN/GN). After the signal for the autolamps is received, the instrument cluster then monitors the photocell ambient light conditions by sending a signal to the photocell through circuit 8-LE42 (WH/BU). The photocell is grounded through circuit 31-LE42 (BK/OG). If a problem is detected with any of the voltage reference signals to the headlamp switch, the instrument cluster will default the headlamps and parking lamps ON.

Possible Causes

- Circuit 8-LE42 (WH/BU) open or short to power
- Circuit 10-LE47 (GY/OG) open or short to power
- Circuit 31-LE42 (BK/OG) open
- Photocell
- Headlamp switch
- Instrument cluster

PINPOINT TEST K: THE AUTOLAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK THE HEADLAMPS OPERATION	
• Place the headlamp switch in the headlamps ON position. • **Do the low beams illuminate?**	**Yes** GO to K2 . **No** REFER to Headlamps in this section to continue diagnostics.
K2 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the knob to the autolamps ON position. • **Does the PID match with the headlamp switch position?**	**Yes** GO to K6 . **No** GO to K3 .
K3 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to K4 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
K4 CHECK CIRCUIT 10-LE47 (GY/OG) FOR AN OPEN	

• Disconnect: Instrument Cluster C220c. • Measure the resistance between instrument cluster C220c-18, circuit 10-LE47 (GY/OG), harness side and headlamp switch C205-4, circuit 10-LE47 (GY/OG), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to K5 . **No** REPAIR the circuit. TEST the system for normal operation.
K5 CHECK CIRCUIT 10-LE47 (GY/OG) FOR A SHORT TO POWER	
• Measure the voltage between instrument cluster C220c-18, circuit 10-LE47 (GY/OG), harness side and ground.  • **Is voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to K11 .
K6 CHECK PHOTOCELL INPUT	
• Monitor the instrument cluster photocell status PID while covering and then illuminating the photocell. • **Does the PID percentage change with the sensor covered and then illuminated?**	**Yes** GO to K11 . **No** GO to K7 .
K7 CHECK THE PHOTOCELL	
• Key in OFF position. • Disconnect: Photocell C286. • Key in ON position. • Monitor the instrument cluster photocell status PID while connecting and then disconnecting a fused (5A) jumper wire between photocell C286-2, circuit 8-LE42 (WH/BU), harness side and photocell C286-5, circuit 31-LE42 (BK/OG), harness side.  • **Does the PID percentage change with the jumper wire connected and then disconnected?**	**Yes** INSTALL a new photocell. REFER to Light Sensor in this section. TEST the system for normal operation. **No** GO to K8 .
K8 CHECK CIRCUIT 31-LE42 (BK/OG) FOR AN OPEN	

• Key in OFF position. • Measure the resistance between photocell C286-5, circuit 31-LE42 (BK/OG), harness side and ground.  A0056759 • **Is the resistance less than 5 ohms?**	**Yes** GO to K9 . **No** REPAIR the circuit. TEST the system for normal operation.
K9 CHECK CIRCUIT 8-LE42 (WH/BU) FOR AN OPEN	
• Disconnect: Instrument Cluster C220a. • Measure the resistance between instrument cluster C220a-19, circuit 8-LE42 (WH/BU), harness side and photocell C286-2, circuit 8-LE42 (WH/BU), harness side.  A0056760 • **Is the resistance less than 5 ohms?**	**Yes** GO to K10 . **No** REPAIR the circuit. TEST the system for normal operation.
K10 CHECK CIRCUIT 8-LE42 (WH/BU) FOR A SHORT TO POWER	
• Key in ON position. • Measure the voltage between instrument cluster C220a-19, circuit 8-LE42 (WH/BU), harness side and ground.  A0057524 • **Is voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to K11 .
K11 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the

	self-test.

Pinpoint Test L: The Autolamps Are ON Continuously

Normal Operation

The instrument cluster monitors a signal to the headlamp switch through circuit 10-LE47 (GY/OG). When the headlamp switch is turned to the autolamps ON position, the signal is returned through circuit 9-LE29 (BN/GN). After the signal for the autolamps is received, the instrument cluster monitors the photocell ambient light conditions by sending a signal to the photocell through circuit 8-LE42 (WH/BU).

Possible Causes

- Circuit 8-LE42 (WH/BU) short to ground
- Circuit 10-LE47 (GY/OG) short to ground
- Photocell
- Headlamp switch
- Instrument cluster

PINPOINT TEST L: THE AUTOLAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
L1 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the headlamp switch knob from the autolamps ON to OFF positions. • **Does the PID match the headlamp switch position?**	**Yes** GO to L4 . **No** GO to L2 .
L2 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to L3 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
L3 CHECK CIRCUIT 10-LE47 (GY/OG) FOR A SHORT TO GROUND	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between instrument cluster C220c-18, circuit 10-LE47 (GY/OG), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to L7 .

 A0057525 • **Is the resistance less than 5 ohms?**	
L4 CHECK THE OPERATION OF THE PHOTOCELL SENSOR	
• Monitor the instrument cluster photocell status PID while covering and then illuminating the photocell. • **Does the PID percentage change with the sensor covered and then illuminated?**	**Yes** GO to L7 . **No** GO to L5 .
L5 CHECK THE PHOTOCELL	
• Key in OFF position. • Disconnect: Photocell C286. • Key in ON position. • Monitor the instrument cluster photocell status PID while connecting and then disconnecting a fused (5A) jumper wire between photocell C286-2, circuit 8-LE42 (WH/BU), harness side and photocell C286-5, circuit 31-LE42 (BK/OG), harness side.  A0056758 • **Does the PID percentage change with the jumper wire connected and then disconnected?**	**Yes** INSTALL a new photocell. REFER to Light Sensor in this section. TEST the system for normal operation **No** GO to L6 .
L6 CHECK CIRCUIT 8-LE42 (WH/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Measure the resistance between instrument cluster C220a-19, circuit 8-LE42 (WH/BU), harness side and ground.  A0057526 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to L7 .
L7 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.

• Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Stoplamps

Refer to Wiring Diagrams Cell 90 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Brake pedal position (BPP) switch	• Battery junction box (BJB) fuses: ♦ 3 (5A) (LH stoplamp) ♦ 7 (5A) (RH stoplamp) ♦ 8 (5A) (high-mounted stoplamp) • Central junction box (CJB) fuses 35 (5A) (brake pedal position [BPP] switch) • Circuitry • Rear electronic module (REM) • Interactive vehicle dynamics (IVD) module • Anti-lock brake system (ABS) module • Electric parking brake module • Bulbs

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.

- check the connections to the vehicle.
- check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for REM, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM.

7. If the DTCs retrieved are related to the concern, go to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

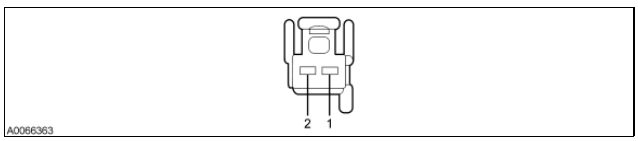
Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	REM	CLEAR and DOCUMENT the DTCs. CARRY OUT the REM self-test. INSTALL a new REM if DTC B1342 is retrieved again. REFER to Section 418-00 .
B1483	Brake Pedal Input Circuit Failure	REM	Go To Pinpoint Test O .

Symptom Chart

Symptom Chart
Connector Circuit Reference

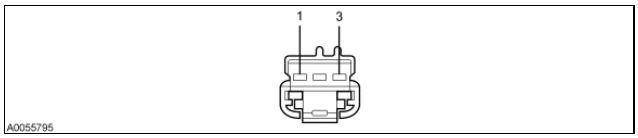
BPP Switch C278



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1		Greater than 10 volts with the ignition in any position.

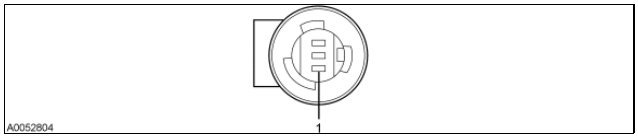
	29-CF58 (OG/GN) B+ power supply circuit	
2	29S-CF1 (OG/YE) switched power supply circuit to REM or IVD module	0 voltage, less than 5 ohms between the BPP switch and the REM (if not equipped with IVD) or less than 5 ohms between the BPP switch and the IVD module (if equipped).

High-Mounted Stoplamp C302



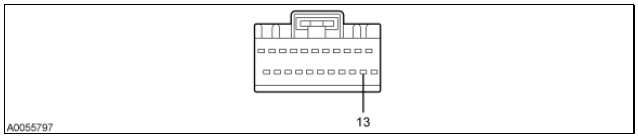
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31S-LG6A (BK/YE) high-mounted stoplamp control ground circuit	0 voltage, less than 5 ohms between the high-mounted stoplamp and the REM.
3	29S-LG6A (OG/YE) switched power supply circuit	Greater than 10 volts with the ignition switch ON.

LH Combination Lamp C414, RH Combination Lamp C417



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-LF23 (OG) rear lamp switched power supply circuit	Greater than 10 volts with the ignition ON.

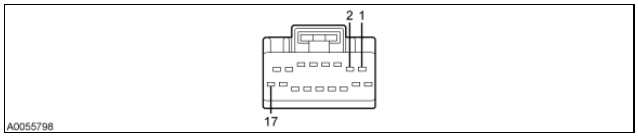
REM C420b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

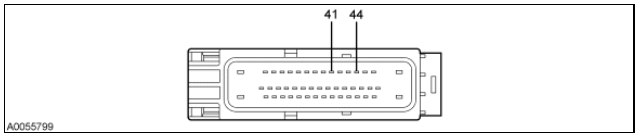
13	29S-DK30 (OG) BPP switch output circuit	0 voltage, Greater than 10 volts when the brake pedal is applied. Less than 5 ohms between the REM and the BPP switch (if equipped without IVD). Less than 5 ohms between the REM and the IVD module (if equipped with IVD). Greater than 10,000 ohms between the REM and ground.

REM C420e



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31S-LG21 (BK/GN) RH rear stoplamp control ground circuit	0 voltage, less than 5 ohms between the REM and the RH rear stoplamp. Greater than 10 volts when the ignition switch is ON.
2	31S-LG14 (BK/OG) LH rear stoplamp control ground circuit	0 voltage, less than 5 ohms between the REM and the LH rear stoplamp. Greater than 10 volts when the ignition switch is ON.
17	31S-LG6 (BK/YE) high-mounted stoplamp control ground circuit	0 voltage, less than 5 ohms between the REM and the high-mounted stoplamp. Greater than 10 volts when the ignition switch is ON.

IVD Module C155



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
41	29S-CF1 (OG/YE) BPP switch input circuit	0 voltage, less than 5 ohms between the IVD module and the BPP switch. Greater than 10 volts when the brake pedal is applied.
44	29S-CF2 (OG/BU) IVD module brakes applied output circuit	0 voltage, less than 5 ohms between the IVD module and the REM. Greater than 10,000 ohms between the IVD module and ground.

Pinpoint Test M: The Stoplamps Are Inoperative

Normal Operation Vehicles Without Interactive Vehicle Dynamics (IVD)

The stoplamp ground circuits are independently controlled by the rear electronic module (REM). The brake pedal position switch (BPP) is supplied battery voltage through circuit 29-CF58 (OG/GN). When the brake pedal is pressed, the BPP switch allows voltage to flow through to circuit 29S-CF1 (OG/YE). Circuit 29S-CF1 (OG/YE) is spliced to carry the voltage to the anti-lock brake system (ABS) module, the powertrain control module (PCM) and the rear electronic module (REM). Voltage to the REM (from the BPP switch) after the splice is carried through circuit 29S-DK30 (OG). When the REM receives voltage from the BPP switch, the REM illuminates the stoplamps.

Normal Operation Vehicles With IVD

The stoplamp ground circuits are independently controlled by the rear electronic module (REM). The brake pedal position switch (BPP) is supplied battery voltage through circuit 29-CF58 (OG/GN). When the brake pedal is pressed, the BPP switch allows voltage to flow through circuit 29S-CF1 (OG/YE) to the IVD module. The IVD module then sends voltage through circuit 29S-CF2 (OG/BU), which is spliced to carry the voltage to the powertrain control module (PCM) and the rear electronic module (REM). Voltage to the REM (from the IVD module) after the splice is carried through circuit 29S-DK30 (OG). When the REM receives voltage from the IVD module, the REM illuminates the stoplamps.

Possible Causes

- Circuit 29-CF58 (OG/GN) open
- Circuit 29S-CF1 (OG/YE) open
- Circuit 29S-CF2 (OG/BU) open or shorted to ground
- Circuit 29S-DK30 (OG) open or shorted to ground
- BPP switch
- REM
- IVD module

PINPOINT TEST M: THE STOPLAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE BPP SWITCH INPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the REM BPP switch status PID while pressing and releasing the brake pedal. • **Does the PID indicate active with the brake pedal pressed and inactive with the brake pedal released?**	**Yes** GO to M8 . **No** GO to M2 .
M2 CHECK CIRCUIT 29-CF58 (OG/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: BPP Switch C278. • Measure the voltage between BPP switch C278-1, circuit 29-CF58 (OG/GN), harness side and ground.	**Yes** GO to M3 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0057527 • **Is the voltage greater than 10 volts?**	
M3 CHECK THE BPP SWITCH	
• Connect a fused (5A) jumper wire between BPP switch C278-1, circuit 29-CF58 (OG/GN), harness side and BPP switch C278-2, circuit 29S-CF1 (OG/YE), harness side.  A0057528 • **Do the stoplamps illuminate?**	**Yes** INSTALL a new BPP switch. REFER to Stoplamp Switch in this section. TEST the system for normal operation. **No** If not equipped with IVD, GO to M4 . If equipped with IVD, GO to M5 .
M4 CHECK THE BPP SWITCH INPUT CIRCUIT TO THE REM	
• Connect: BPP Switch C278. • Disconnect: REM C420b. • Measure the voltage between REM C420b-13, circuit 29S-DK30 (OG), harness side and ground while pressing the brake pedal.  A0057529 • **Is the voltage greater than 10 volts?**	**Yes** GO to M8 . **No** REPAIR the BPP input circuit between the REM and the BPP switch. TEST the system for normal operation.
M5 CHECK THE BPP SWITCH OUTPUT CIRCUIT TO THE IVD MODULE	
• Disconnect: IVD Module C155. • Measure the voltage between IVD module C155-41, circuit 29S-CF1 (OG/YE), harness side and ground while pressing the brake pedal.  A0057530 • **Is the voltage greater than 10 volts?**	**Yes** GO to M6 . **No** REPAIR the BPP input circuit between the IVD module and the BPP switch. TEST the system for normal operation.
M6 CHECK THE IVD MODULE	

• Connect a fused (5A) jumper wire between IVD module C155-41, circuit 29S-CF1 (OG/YE), harness side and IVD module C155-44, circuit 29S-CF2 (OG/BU), harness side.  A0057531 • Press the brake pedal and observe the stoplamps. • **Do the stoplamps illuminate?**	**Yes** GO to M9 . **No** LEAVE the jumper wire connected. GO to M7 .
M7 CHECK THE IVD MODULE OUTPUT CIRCUIT TO THE REM	
• Disconnect: REM C420b. • Measure the voltage between REM C420b-13, circuit 29S-DK30 (OG), harness side and ground while pressing the brake pedal.  A0057529 • **Is the voltage greater than 10 volts?**	**Yes** GO to M8 . **No** REPAIR circuit 29S-CF2 (OG/BU) or 29S-DK30 (OG). TEST the system for normal operation.
M8 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
M9 CHECK IVD MODULE OPERATION	
• Key in OFF position. • Disconnect the IVD module connector. • Check for: ♦ corrosion ♦ pushed-out pins • Connect the IVD module connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new IVD module. REFER to Section 206-09 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test N: One Or More Stoplamps Are Inoperative

Normal Operation

Each stoplamp is supplied battery voltage independently. Power from the battery junction box (BJB) flows through circuit 29S-LG6 (OG/YE) to circuit 29S-LG6A (OG/YE) and then on to the high-mounted stoplamp. Power from the BJB flows through circuit 29S-LF23 (OG) to the LH stoplamp. Power from the BJB flows through circuit 29S-LF24 (OG/BK) to circuit 29S-LF23 (OG) and then on to the RH stoplamp. The stoplamp ground circuits are independently controlled by the rear electronic module (REM). When the REM receives voltage from the BPP switch (or IVD module if equipped), the REM grounds circuits 31S-LG6 (BK/YE) (high-mounted stoplamp), 31S-LG14 (BK/OG) (LH stoplamp) and 31S-LG21 (BK/GN) (RH stoplamp) to illuminate the stoplamps.

Possible Causes

- Circuit 29S-LG6 (OG/YE) open
- Circuit 29S-LG6A (OG/YE) open
- Circuit 29S-LF23 (OG) open
- Circuit 29S-LF24 (OG/BK) open
- Circuit 31S-LG6 (BK/YE) open or short to power
- Circuit 31S-LG6A (BK/YE) open or short to power
- Circuit 31S-LG14 (BK/OG) open or short to power
- Circuit 31S-LG21 (BK/GN) open or short to power
- High-mounted stoplamp
- REM

PINPOINT TEST N: ONE OR MORE STOPLAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
N1 DETERMINE THE INOPERATIVE STOPLAMP(S)	
• Key in ON position. • Press the brake pedal and observe the stoplamps. • **Are all the stoplamps inoperative?**	**Yes** Go To Pinpoint Test M . **No** If the LH or RH stoplamp is inoperative, GO to N2 . If the high-mounted stoplamp is inoperative, GO to N4 .
N2 CHECK THE VOLTAGE TO THE INOPERATIVE STOPLAMP	
• Key in OFF position. • Disconnect: LH Combination Lamp C414 or RH Combination Lamp C417. • Key in ON position. • Measure the voltage between LH combination lamp C414-1, circuit 29S-LF23 (OG), harness side and ground; or between RH combination lamp C417-1, circuit 29S-LF23 (OG), harness side and ground.	**Yes** RECONNECT the combination lamp. GO to N3 . **No** REPAIR circuit 29S-LF23 (OG) or circuit 29S-LF24 (OG/BK) as necessary. TEST the system for normal operation.

 A0057532 • **Is the voltage greater than 10 volts?**	
N3 CHECK THE REM	
• Disconnect: REM C420e. • **NOTE:** If the fuse in the jumper wire fails, repair the circuit for short to power. • Connect a fused (5A) jumper wire between REM C420e-2 (LH stoplamp), circuit 31S-LG14 (BK/OG), harness side and ground; or between REM C420e-1 (RH stoplamp), circuit 31S-LG21 (BK/GN), harness side and ground.  A0057533 • **Does the inoperative stoplamp now illuminate?**	**Yes** GO to N7 . **No** REPAIR circuit 31S-LG14 (BK/OG) or 31S-LG21 (BK/GN) as necessary. TEST the system for normal operation.
N4 CHECK FOR POWER TO THE HIGH MOUNTED STOPLAMP	
• Key in OFF position. • Disconnect: High-Mounted Stoplamp C302. • Measure the voltage between high-mounted stoplamp C302-3, circuit 29S-LG6A (OG/YE), harness side and ground.  A0057534 • **Is the voltage greater than 10 volts?**	**Yes** RECONNECT the high-mounted stoplamp. GO to N5 . **No** REPAIR circuit 29S-LG6A (OG/YE) or 29S-LG6 (OG/YE) as necessary. TEST the system for normal operation.
N5 CHECK THE REAR ELECTRONIC MODULE (REM) (HIGH-MOUNTED STOPLAMP)	
• Disconnect: REM C420e. • **NOTE:** If the fuse in the jumper wire fails, repair the circuit for short to power. • Connect a fused (5A) jumper wire between REM C420e-17 (high-mounted stoplamp), circuit 31S-LG6 (BK/YE), harness side and ground.	**Yes** GO to N7 . **No** LEAVE the jumper wire connected. GO to N6 .

 A0057535 • **Does the high-mounted stoplamp now illuminate?**	
N6 CHECK CIRCUITS 31S-LG6 (BK/YE) AND 31S-LG6A (BK/YE) FOR AN OPEN	
• Disconnect: High-Mounted Stoplamp C302. • Measure the resistance between high-mounted stoplamp C302-1, circuit 31S-LG6A (BK/YE), harness side and ground.  A0057536 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new high-mounted stoplamp. REFER to High Mounted Stoplamp in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
N7 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test O: The Stoplamps Are ON Continuously

Normal Operation Vehicles Equipped Without Interactive Vehicle Dynamics (IVD)

Each stoplamp is supplied battery voltage independently. The stoplamp ground circuits are independently controlled by the rear electronic module (REM). When the brake pedal is pressed, the BPP switch allows voltage to flow through to circuit 29S-CF1 (OG/YE). Circuit 29S-CF1 (OG/YE) is spliced to carry the voltage to the anti-lock brake system (ABS) module, the powertrain control module (PCM) and the rear electronic module (REM). Voltage to the REM (from the BPP switch) after the splice is carried through circuit 29S-DK30 (OG). When the REM receives voltage from the BPP switch, the REM grounds circuits 31S-LG6 (BK/YE) (high-mounted stoplamp), 31S-LG14 (BK/OG) (LH stoplamp) and 31S-LG21 (BK/GN) (RH stoplamp) to illuminate the stoplamps. The electric parking brake can also trigger the stoplamps by communicating to the REM (via the SCP link) that the parking brake has been actuated while the vehicle is moving.

Normal Operation Vehicles Equipped With IVD

Each stoplamp is supplied battery voltage independently. The stoplamp ground circuits are independently controlled by the rear electronic module (REM). When the brake pedal is pressed, the BPP switch allows voltage to flow through circuit 29S-CF1 (OG/YE) to the IVD module. The IVD module then sends voltage

through circuit 29S-CF2 (OG/BU), which is spliced to carry the voltage to the powertrain control module (PCM) and the rear electronic module (REM). Voltage to the REM (from the IVD module) after the splice is carried through circuit 29S-DK30 (OG). When the REM receives voltage from the IVD module, the REM grounds circuits 31S-LG6 (BK/YE) (high-mounted stoplamp), 31S-LG14 (BK/OG) (LH stoplamp) and 31S-LG21 (BK/GN) (RH stoplamp) to illuminate the stoplamps. The electric parking brake can also trigger the stoplamps by communicating to the REM (via the SCP link) that the parking brake has been actuated while the vehicle is moving.

Possible Causes

- Circuit 29S-CF1 (OG/YE) short to power
- Circuit 29S-CF2 (OG/BU) short to power
- Circuit 29S-CF58 (OG/GN) short to power
- Circuit 29S-DK30 (OG) short to power
- Circuit 29S-RE13 (OG) short to power
- Circuit 31S-LG6 (BK/YE) short to ground
- Circuit 31S-LG6A (BK/YE) short to ground
- Circuit 31S-LG14 (BK/OG) short to ground
- Circuit 31S-LG21 (BK/GN) short to ground
- BPP switch
- IVD module
- ABS module
- PCM
- REM
- Electric parking brake module

PINPOINT TEST O: THE STOPLAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
O1 DETERMINE THE ALWAYS ON STOPLAMPS	
• Observe the stoplamps. • **Are all the stoplamps illuminated?**	**Yes** GO to O3 . **No** GO to O2 .
O2 CHECK THE CONTROL GROUND CIRCUIT FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: REM C420e. • **Does the lamp continue to illuminate?**	**Yes** For the high-mounted stoplamp, REPAIR circuit 31S-LG6 (BK/YE) or 31S-LG6A (BK/YE) as necessary. TEST the system for normal operation. For the LH stoplamp, REPAIR circuit 31S-LG14 (BK/OG). TEST the system for normal operation. For the RH stoplamp, REPAIR circuit 31S-LG21 (BK/GN) or 31S-LG14 (BK/OG) as necessary. TEST the system for normal operation.

	No GO to O10 .
O3 CHECK THE BPP SWITCH	
• Key in OFF position. • Disconnect: BPP Switch C278. • **Do the stoplamps continue to illuminate?**	**Yes** If equipped with IVD, GO to O4 . If not equipped with IVD, GO to O6 . **No** INSTALL a new BPP switch. REFER to Stoplamp Switch in this section. TEST the system for normal operation.
O4 CHECK THE IVD MODULE	
• Disconnect: IVD Module C155. • **Do the stoplamps continue to illuminate?**	**Yes** GO to O6 . **No** GO to O5 .
O5 CHECK CIRCUIT 29S-CF1 (OG/YE) FOR A SHORT TO POWER	
• Measure the voltage between BPP switch C278-2, circuit 29S-CF1 (OG/YE), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. **No** GO to O11 .
O6 CHECK THE ABS MODULE	
• Disconnect: ABS Module C135. • **Do the stoplamps continue to illuminate?**	**Yes** GO to O7 . **No** GO to O12 .
O7 CHECK THE ELECTRIC PARKING BRAKE MODULE	
• Disconnect: Electric Parking Brake Module C4206. • **Do the stoplamps continue to illuminate?**	**Yes** GO to O8 . **No** GO to O13 .
O8 CHECK THE PCM	
• Disconnect: PCM C175a. • **Do the stoplamps continue to illuminate?**	**Yes** GO to O9 . **No** GO to O14 .
O9 CHECK THE REM	

• Disconnect: REM C420b. • **Do the stoplamps continue to illuminate?**	**Yes** REPAIR circuit 29S-DK30 (OG), 29S-CF1 (OG/YE), 29S-CF2 (OG/BU), 29S-CF58 (OG/GN) or 29S-RE13 (OG) as necessary. CLEAR the DTCs. TEST the system for normal operation. **No** GO to O10 .
O10 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
O11 CHECK IVD MODULE OPERATION	
• Key in OFF position. • Disconnect all IVD module connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all IVD module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new IVD module. REFER to Section 206-09 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
O12 CHECK ABS MODULE OPERATION	
• Key in OFF position. • Disconnect all ABS module connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all ABS module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new ABS module. REFER to Section 206-09 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
O13 CHECK ELECTRIC PARKING BRAKE MODULE OPERATION	
• Key in OFF position.	**Yes** INSTALL a new electric parking brake module. REFER to

• Disconnect all electric parking brake module connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all electric parking brake module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	Section 206-05 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
O14 CHECK PCM OPERATION	
• Key in OFF position. • Disconnect all PCM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all PCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Turn Signal and Hazard Lamps

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Multifunction switch	• Battery junction box (BJB) fuses: ♦ 2 (10A) (RH rear turn signal lamp) ♦ 6 (10A) (LH rear turn signal lamp) • Central junction box (CJB) fuses: ♦ 8 (5A) (RH front parking/turn lamp) ♦ 10 (5A) (LH front parking/turn lamp) • Circuitry • Bulbs • Front electronic module (FEM) • Rear electronic module (REM) • Instrument cluster

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for FEM, refer to Section 418-00 .
   - No response/not equipped for REM, refer to Section 418-00 .
   - No response/not equipped for instrument cluster, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index or Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 .
B1499	Lamp Turn Signal Left Circuit Failure	FEM	If inoperative, Go To Pinpoint Test Q . If always on, Go To Pinpoint Test R .
B1501	Lamp Turn Signal Left Circuit Short to Battery	FEM	Go To Pinpoint Test Q .
B1503	Lamp Turn Signal Right Circuit Failure	FEM	If inoperative, Go To Pinpoint Test Q . If always on, Go To Pinpoint Test R .
B1505	Lamp Turn Signal Right Circuit Short to Battery	FEM	Go To Pinpoint Test Q .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	REM	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new REM if DTC B1342 is retrieved again. REFER to Section 419-10 .
B1499	Lamp Turn Signal Left Circuit Failure	REM	If inoperative, Go To Pinpoint Test Q . If always on, Go To Pinpoint Test R .
B1501	Lamp Turn Signal Left Circuit Short to Battery	REM	Go To Pinpoint Test Q .
B1503	Lamp Turn Signal Right Circuit Failure	REM	If inoperative, Go To Pinpoint Test Q . If always on, Go To Pinpoint Test R .
B1505	Lamp Turn Signal Right Circuit Short to Battery	REM	Go To Pinpoint Test Q .

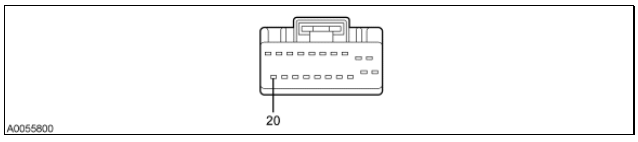
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	Instrument cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster Self-Test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01 .
B1875	Turn Signal/Hazard Switch Signal Circuit Failure	Instrument cluster	Go To Pinpoint Test S .

Symptom Chart

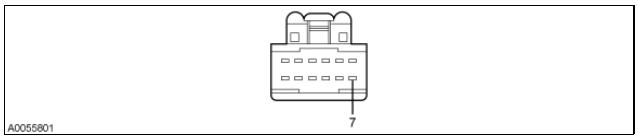
Symptom Chart
Connector Circuit Reference

Instrument Cluster C220b



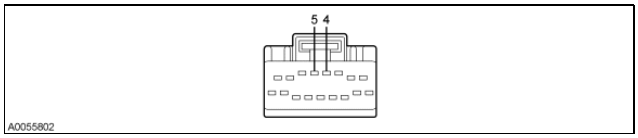
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
20	8-LG43 (WH/VT) multifunction switch signal output circuit	0 voltage, less than 5 ohms between the instrument cluster and the multifunction switch. Greater than 10,000 ohms between the instrument cluster and ground.

Multifunction Switch C202



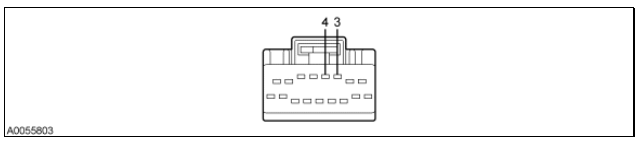
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	8-LG43 (WH/VT) multifunction switch signal output circuit	Less than 5 ohms between the multifunction switch and the instrument cluster. Greater than 10,000 ohms between the instrument cluster and ground.

FEM C201a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	31S-LG18 (BK/YE) RH front turn signal lamp control ground circuit	Less than 5 ohms between the FEM and the RH front turn signal lamp. Greater than 10 volts with the ignition switch ON.
5	31S-LG11 (BK/WH) LH front turn signal lamp control ground circuit	Less than 5 ohms between the FEM and the LH front turn signal lamp. Greater than 10 volts with the ignition switch ON.

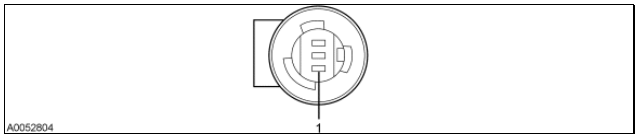
REM C420e



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31S-LG12 (BK/YE) LH rear turn signal lamp control ground circuit	Less than 5 ohms between the REM and the LH rear turn signal lamp. Greater than 10 volts with the ignition switch ON.

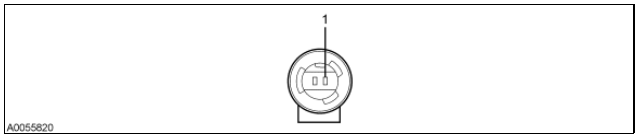
4	31S-LG19 (BK/BU) RH rear turn signal lamp control ground circuit	Less than 5 ohms between the REM and the RH rear turn signal lamp. Greater than 10 volts with the ignition switch ON.

LH Front Turn Signal Lamp C1023, RH Front Turn Signal Lamp C1043



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-LF16 (OG/GN) switched B+ circuit	Greater than 10 volts with the ignition switch ON.

LH Rear Turn Signal Lamp C413, RH Rear Turn Signal Lamp C416



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-LG12 (OG/YE) switched B+ circuit	Greater than 10 volts with the ignition switch ON.

Pinpoint Test P: The Turn Signal Lamps Are Inoperative

Normal Operation

The instrument cluster sends out a voltage reference signal through circuit 8-LG43 (WH/VT) to the multifunction switch. The return signal is carried through circuit 9-LG43 (BN/WH) (shared with the high beam circuit) back to the instrument cluster. When the multifunction switch is placed in the RH or LH turn positions, the voltage signal sent by the instrument cluster passes through a resistor within the multifunction switch (specific to LH and RH turn positions) before returning to instrument cluster.

Possible Causes

- Circuit 8-LG43 (WH/VT) open or short to power
- Multifunction switch
- Instrument cluster

PINPOINT TEST P: THE TURN SIGNAL LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
P1 CHECK THE HIGH BEAM OPERATION	
• Key in ON position. • Turn the headlamp switch to the headlamps ON position. • Place the multifunction switch in the high beam position. • **Do the high beams operate correctly?**	**Yes** TURN the headlamp switch OFF. GO to P2 . **No** Go To Pinpoint Test B to diagnose the high beams.
P2 CHECK THE MULTIFUNCTION SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster turn signal status PID while placing the multifunction switch in the RH and then LH turn positions. • **Does the PID match the multifunction switch positions?**	**Yes** GO to P6 . **No** GO to P3 .
P3 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the multifunction switch OK?**	**Yes** GO to P4 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
P4 CHECK CIRCUIT 8-LG43 (WH/VT) FOR AN OPEN	
• Disconnect: Instrument Cluster C220b. • Measure the resistance between instrument cluster C220b-20, circuit 8-LG43 (WH/VT), harness side and multifunction switch C202-7, circuit 8-LG43 (WH/VT), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to P5 . **No** REPAIR the circuit. TEST the system for normal operation.
P5 CHECK CIRCUIT 8-LG43 (WH/VT) FOR A SHORT TO POWER	

• Key in ON position. • Measure the voltage between instrument cluster C220b-20, circuit 8-LG43 (WH/VT), harness side and ground.  • **Is any voltage present?**	**Yes** GO to P6 . **No** REPAIR the circuit. TEST the system for normal operation.
P6 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test Q: One Turn Signal Lamp Is Inoperative

Normal Operation

Power is supplied from the central junction box (CJB) to the LH front turn signal lamp through circuits 29S-LF3 (OG/YE) and 29S-LF7 (OG/BU). The ground for the LH front turn signal lamp is passed through circuit 31S-LG18 (BK/YE) and then through circuit 31S-LG11 (BK/WH) to the front electronic module (FEM). Power is supplied from the CJB to the RH front turn signal lamp through circuits 29S-LF4 (OG/BU) and 29S-LF16 (OG/GN). The ground for the RH front turn signal lamp is passed through circuit 31S-LG18 (BK/YE) to the FEM. Power is supplied from the battery junction box (BJB) to the LH rear turn signal lamp through circuits 29S-LG1 (OG/YE) and 29S-LG12 (OG/YE). The ground for the LH rear turn signal lamp is passed through circuit 31S-LG12 (BK/YE) to the rear electronic module (REM). Power is supplied from the BJB to the RH rear turn signal lamp through circuits 29S-LG2 (OG/BU), 29S-LG19 (OG/BU) and 29S-LG12 (OG/YE). The ground for the RH rear turn signal lamp is passed through circuit 31S-LG12 (BK/YE) and then through circuit 31S-LG19 (BK/BU) to the REM. The FEM and REM individually control the ground circuits for the turn signal lamps. The timed ON/OFF cycle is determined in the instrument cluster programming and is set to flash approximately 80 times per minute if both the front and rear turn signal lamps are good. If only one turn signal lamp is good, the instrument cluster will flash the remaining working turn signal lamp(s) approximately 160 times per minute.

Possible Causes

- Circuit 29S-LF3 (OG/YE) open
- Circuit 29S-LF7 (OG/BU) open
- Circuit 31S-LG18 (BK/YE) open or short to power
- Circuit 31S-LG11 (BK/WH) open or short to power
- Circuit 29S-LF4 (OG/BU) open
- Circuit 29S-LF16 (OG/GN) open
- Circuit 29S-LG1 (OG/YE) open
- Circuit 29S-LG12 (OG/YE) open

- Circuit 31S-LG12 (BK/YE) open or short to power
- Circuit 29S-LG2 (OG/BU) open
- Circuit 29S-LG19 (OG/BU) open
- Circuit 31S-LG19 (BK/BU) open or short to power
- FEM
- REM

PINPOINT TEST Q: ONE TURN SIGNAL LAMP IS INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>Q1 CHECK THE POWER SUPPLY TO THE TURN SIGNAL LAMP</td><td></td></tr>
<tr><td>
• Key in OFF position.
• Disconnect: Inoperative Turn Signal Lamp.
• Key in ON position.
• Measure the voltage between the inoperative lamp and ground as follows:
<table>
<tr><th>Inoperative Turn Signal Lamp Connector-Pin</th><th>Circuit</th></tr>
<tr><td>LH front parking/turn signal lamp C1023-1</td><td>29S-LF16 (OG/GN)</td></tr>

RH rear turn signal lamp	REM C420e-4	31S-LG19 (BK/BU)

Yes
For the front turn signal lamp, GO to Q4 .

For the rear turn signal lamp, GO to Q5 .

No
REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation.

 A0057542 • **Does the inoperative lamp now illuminate?**	
Q4 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
Q5 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test R: One Turn Signal Lamp Is Always ON

Normal Operation

Power is supplied from the central junction box (CJB) to the LH front turn signal lamp through circuits 29S-LF3 (OG/YE) and 29S-LF7 (OG/BU). The ground for the LH front turn signal lamp is passed through circuit 31S-LG18 (BK/YE) and then through circuit 31S-LG11 (BK/WH) to the front electronic module (FEM). Power is supplied from the CJB to the RF turn signal lamp through circuits 29S-LF4 (OG/BU) and 29S-LF16 (OG/GN). The ground for the RH front turn signal lamp is passed through circuit 31S-LG18 (BK/YE) to the FEM. Power is supplied from the battery junction box (BJB) to the LH rear turn signal lamp through circuits 29S-LG1 (OG/YE) and 29S-LG12 (OG/YE). The ground for the LH rear turn signal lamp is passed through circuit 31S-LG12 (BK/YE) to the rear electronic module (REM). Power is supplied from the BJB to the RH rear turn signal lamp through circuits 29S-LG2 (OG/BU), 29S-LG19 (OG/BU) and 29S-LG12 (OG/YE). The ground for the RH rear turn signal lamp is passed through circuit 31S-LG12 (BK/YE) and then through circuit 31S-LG19 (BK/BU) to the REM. The FEM and REM individually control the ground circuits for the turn signal lamps. The timed ON/OFF cycle is determined in the instrument cluster programming and is set to flash approximately 80 times per minute if both the front and rear turn signal lamps are good. If only one turn signal lamp is good, the instrument cluster will flash the remaining working turn signal lamp(s) approximately 160 times per minute.

Possible Causes

- Circuit 31S-LG18 (BK/YE) short to ground
- Circuit 31S-LG11 (BK/WH) short to ground
- Circuit 31S-LG12 (BK/YE) short to ground
- Circuit 31S-LG19 (BK/BU) short to ground
- FEM
- REM

PINPOINT TEST R: ONE TURN SIGNAL LAMP IS ALWAYS ON

Test Step	Result / Action to Take
R1 CHECK THE CONTROL GROUND CIRCUIT FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201a or REM C420e. • Key in ON position. • Observe the turn signal lamp after disconnecting the FEM (front turn signal lamp always on) or REM (rear turn signal lamp always on). • **Does the lamp continue to illuminate?**	**Yes** REPAIR the control ground circuit in question. CLEAR the DTCs. TEST the system for normal operation. **No** If front turn signal lamp, GO to R2 . If rear turn signal lamp, GO to R3 .
R2 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
R3 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test S: The Hazard Lamps Are Always On

Normal Operation

The instrument cluster sends out a voltage reference signal through circuit 8-LG43 (WH/VT) to the multifunction switch. The return signal is carried through circuit 9-LG43 (BN/WH) (shared with the high

beam circuit) back to the instrument cluster. When the hazard switch is engaged, the voltage signal sent by the instrument cluster passes directly through the multifunction switch and returns to the instrument cluster.

Possible Causes

- Circuit 8-LG43 (WH/VT) short to ground
- Multifunction switch
- Instrument cluster

PINPOINT TEST S: THE HAZARD LAMPS ARE ALWAYS ON

Test Step	Result / Action to Take
S1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the multifunction switch OK?**	**Yes** GO to S2 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . CLEAR the DTCs. TEST the system for normal operation.
S2 CHECK CIRCUIT 8-LG43 (WH/VT) FOR A SHORT TO GROUND	
• Disconnect: Instrument Cluster C220b. • Measure the resistance between multifunction switch C202-7, circuit 8-LG43 (WH/VT), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. **No** GO to S3 .
S3 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly.	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

• Operate the system and verify the concern is still present. • **Is the concern still present?**	

Parking, Rear and License Lamps

Refer to Wiring Diagrams Cell 92 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Headlamp switch	• Battery junction box (BJB) fuses: ♦ 2 (10A) (license plate lamps) ♦ 3 (5A) (LH rear parking lamp) ♦ 7 (5A) (RH rear parking lamp) • Central junction box (CJB) fuses: ♦ 8 (5A) (RH front side marker and parking lamp) ♦ 10 (5A) (LH front side marker and parking lamp) • Circuitry • Bulbs • Front electronic module (FEM) • Rear electronic module (REM) • Instrument cluster

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for FEM, refer to Section 418-00 .
   - No reponse/not equipped for REM, refer to Section 418-00 .
   - No response/not equipped for instrument cluster, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.

7. If the DTCs retrieved are related to the concern, go to Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index or Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	REM	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new REM if DTC B1342 is retrieved again. REFER to Section 419-10 .

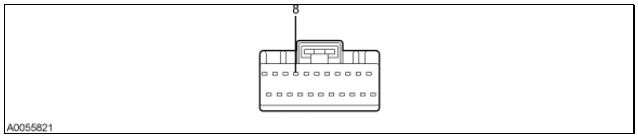
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	Instrument cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster Self-Test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01 .
B1470	Lamp Headlamp Input Circuit Failure	Instrument cluster	Go To Pinpoint Test E .

Symptom Chart

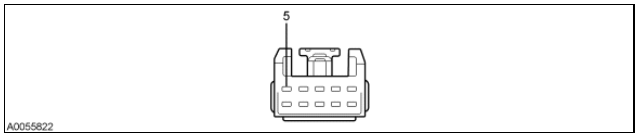
Symptom Chart
Connector Circuit Reference

Instrument Cluster C220c



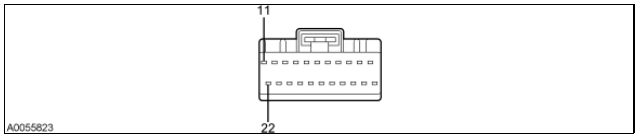
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	8-LF14 (WH/BU) instrument cluster parking lamps input signal	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch.

Headlamp Switch C205



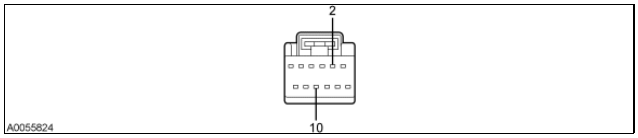
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	8-LF14 (WH/BU) instrument cluster parking lamps input signal	Less than 5 ohms between the headlamp switch and headlamp switch. Greater than 10,000 ohms between the headlamp switch and ground

FEM C201b



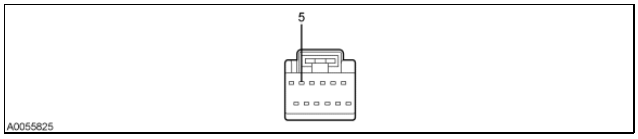
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	31S-LF17 (BK/WH) RH front side marker lamp control ground circuit	Less than 5 ohms between the FEM and the RH front side marker lamp. Greater than 10 volts with the ignition ON.
22	31S-LF8 (BK/OG) LH front side marker lamp control ground circuit	Less than 5 ohms between the FEM and the LH front side marker lamp. Greater than 10 volts with the ignition ON.

FEM C201c



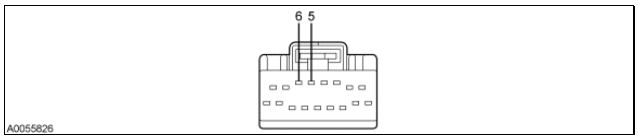
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31S-LF7 (BK/BU) LH front parking lamp control ground circuit	Less than 5 ohms between the FEM and the LH parking marker lamp. Greater than 10 volts with the ignition ON.
10	31S-LF16 (BK/RD) RH front parking lamp control ground circuit	Less than 5 ohms between the FEM and the RH front parking lamp. Greater than 10 volts with the ignition ON.

REM C420a



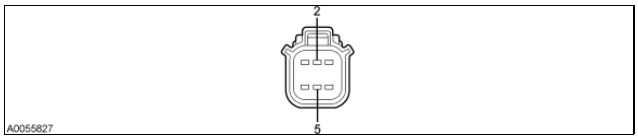
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31S-LF12 (BK/GN) license lamps control ground circuit	Less than 5 ohms between the REM and the license lamps. Greater than 10 volts with the ignition ON.

REM C420e



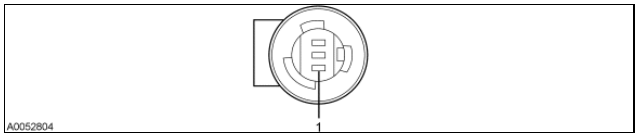
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31S-LF20 (BK/OG) RH rear parking lamp control ground circuit	Less than 5 ohms between the FEM and the RH rear parking lamp. Greater than 10 volts with the ignition ON.
6	31S-LF11 (BK/WH) LH rear parking lamp control ground circuit	Less than 5 ohms between the FEM and the LH rear parking lamp. Greater than 10 volts with the ignition ON.

LH Headlamp C1021, RH Headlamp C1041



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2 (C1021)	29S-LF8 (OG) switched B+ supply circuit	Greater than 10 volts with the ignition ON.
5 (C1021)	31S-LF8 (BK/OG) side marker control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM. Greater than 10,000 ohms between the headlamp and ground.
2 (C1041)	29S-LF17 (OG/WH) switched B+ supply circuit	Greater than 10 volts with the ignition ON.
5 (C1041)	31S-LF17 (BK/WH) side marker control ground circuit	0 voltage, less than 5 ohms between the headlamp and the FEM. Greater than 10,000 ohms between the headlamp and ground.

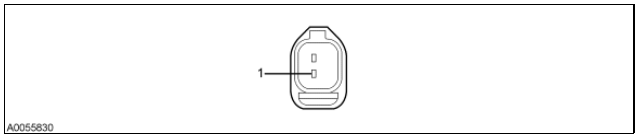
LH Front Parking/Turn Lamp C1023, RH Front Parking/Turn Lamp C1043, LH Rear Parking Lamp C414, RH Rear Parking Lamp C417



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

1 (C1023, C1043)	29S-LF16 (OG/GN) switched B+ supply circuit	Greater than 10 volts with the ignition ON.
1 (C414, C417)	29S-LF23 (OG) switched B+ supply circuit	Greater than 10 volts with the ignition ON.

LH License Lamp C452, RH License Lamp C462



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C452)	29S-LF21 (OG/BK) switched B+ supply circuit	Greater than 10 volts with the ignition switch ON.
1 (C462)	29S-LF22 (OG/BK) switched B+ supply circuit	Greater than 10 volts with the ignition switch ON.

Pinpoint Test T: The Exterior Lamps Are Inoperative

Normal Operation

The instrument cluster monitors the headlamp switch position by sending out voltage reference signals to the headlamp switch. If a problem is detected with the circuits to the headlamp switch, the instrument cluster will default the headlamps and parking lamps on. When the headlamp switch is in the parking lamps ON position, the instrument cluster sends a signal to the front electronic module (FEM) and the rear electronic module (REM) to illuminate the parking lamps.

Possible Causes

- Circuit 8-LF14 (WH/BU) open
- Headlamp switch
- Instrument cluster

PINPOINT TEST T: THE EXTERIOR LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
T1 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the knob to the parking lamps ON position.	**Yes** GO to T4 . **No** GO to T2 .

• **Does the PID match with the headlamp switch position?**	
T2 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to T3 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
T3 CHECK CIRCUIT 8-LF14 (WH/BU) FOR AN OPEN	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between instrument cluster C220c-8, circuit 8-LF14 (WH/BU), harness side and headlamp switch C205-5, circuit 8-LF14 (WH/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to T4 . **No** REPAIR the circuit. TEST the system for normal operation.
T4 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test U: One Or More Parking, Rear Or License Lamp Is Inoperative

Normal Operation

Power is supplied to the LH front side marker and parking lamp through circuits 29S-LF3 (OG/YE), 29S-LF7 (OG/BU), 29S-LF8 (OG) and 29S-LF16 (OG/GN). Ground for the LH front side marker flows through circuit 31S-LF8 (BK/OG) to the front electronic module (FEM). Ground for the LH front parking lamp flows through circuit 31S-LF16 (BK/RD) and then through circuit 31S-LF7 (BK/BU) to the FEM. Power is supplied to the RH front side marker and parking lamp through circuits 29S-LF4 (OG/BU), 29S-LF17 (OG/WH) and 29S-LF16 (OG/GN). Ground for the RH front side marker flows through circuit 31S-LF17 (BK/WH) to the FEM. Ground for the RH front parking lamp flows through circuit 31S-LF16 (BK/RD) to the FEM. Power is supplied to the LH rear parking lamp through circuit 29S-LF23 (OG). Ground for the LH rear parking lamp flows through circuit 31S-LF11 (BK/WH) to the rear electronic module (REM). Power is supplied to the RH rear parking lamp through circuits 29S-LF24 (OG/BK), and 29S-LF23 (OG). Ground for the RH rear parking

lamp flows through circuit 31S-LF11 (BK/WH) and then circuit 31S-LF20 (BK/OG) to the REM. Power is supplied to the license lamps through circuits 29S-LG2 (OG/BU), 29S-LF12 (OG/BK), 29S-LF21 (OG/BK) and 29S-LF22 (OG/BK). Ground for the license lamps flows through circuits 31S-LF21 (BK/GN) and 31S-LF22 (BK/GN) and then through circuit 31S-LF12 (BK/GN) to the REM. The FEM and REM control the ground circuits individually for the lamps (the license lamps share a common ground controlled circuit at the REM).

Possible Causes

- Circuit 29S-LF8 (OG) open
- Circuit 29S-LF16 (OG/GN) open
- Circuit 31S-LF8 (BK/OG) open or short to power
- Circuit 31S-LF16 (BK/RD) open or short to power
- Circuit 31S-LF7 (BK/BU) open or short to power
- Circuit 29S-LF17 (OG/WH) open
- Circuit 31S-LF17 (BK/WH) open or short to power
- Circuit 29S-LF23 (OG) open
- Circuit 31S-LF11 (BK/WH) open or short to power
- Circuit 31S-LF20 (BK/OG) open or short to power
- Circuit 29S-LF21 (OG/BK) open
- Circuit 29S-LF22 (OG/BK) open
- Circuit 31S-LF12 (BK/GN) open or short to power
- REM
- FEM
- Headlamp

PINPOINT TEST U: ONE OR MORE PARKING, REAR OR LICENSE LAMPS ARE INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>U1 CHECK FOR VOLTAGE TO THE INOPERATIVE LAMP(S)</td><td></td></tr>
<tr><td>• Key in OFF position.
• Disconnect: Inoperative Lamp.
• Key in ON position.
• Measure the voltage between the inoperative lamp and ground as follows:

<table><tr><th>Inoperative Lamp</th><th>Connector-Pin</th><th>Circuit</th></tr><tr><td>LH front side marker</td><td>Headlamp C1021-2</td><td>29S-LF8 (OG)</td></tr><tr><td>RH front side marker</td><td>Headlamp C1041-2</td><td>29S-LF17 (OG/WH)</td></tr><tr><td>LH front parking/turn signal lamp</td><td>C1023-1</td><td>29S-LF16 (OG/GN)</td></tr><tr><td>RH front parking/turn signal lamp</td><td>C1043-1</td><td>29S-LF16 (OG/GN)</td></tr><tr><td>LH rear combination lamp</td><td>C414-1</td><td>29S-LF23 (OG)</td></tr></table></td><td>Yes

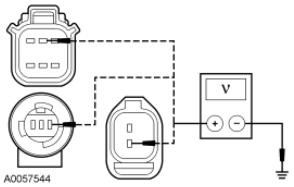
RH rear combination lamp	C417-1	29S-LF23 (OG)
LH license plate lamp	C452-1	29S-LF21 (OG/BK)
RH license plate lamp	C462-1	29S-LF22 (OG/BK)



- **Is the voltage greater than 10 volts?**

U2 CHECK THE CONTROL GROUND CIRCUIT FOR A SHORT TO POWER

- Key in OFF position.
- Disconnect: FEM C201b or C201c.
- Disconnect: REM C420a or C420e.
- Key in ON position.
- Measure the voltage between the FEM or REM as follows:

Inoperative Lamp	Connector-Pin	Circuit
LH front side marker	FEM C201b-22	31S-LF8 (BK/OG)
RH front side marker	FEM C201b-11	31S-LF17 (BK/WH)
LH front parking/turn signal lamp	FEM C201c-2	31S-LF7 (BK/BU)
RH front parking/turn signal lamp	FEM C201c-10	31S-LF16 (BK/RD)
LH rear combination lamp	REM C420e-6	31S-LF11 (BK/WH)
RH rear combination lamp	REM C420e-5	31S-LF20 (BK/OG)
NOTE: Both license lamps must be disconnected for correct test results. LH and RH license plate lamp	REM C420a-5	31S-LF12 (BK/GN)

- **Is any voltage present?**

Yes
REPAIR the control ground circuit as necessary. TEST the system for normal operation.

No
GO to U3 .

U3 CHECK THE CONTROL GROUND CIRCUIT FOR AN OPEN

• Connect: Inoperative Lamp(s). • Connect a fused (5A) jumper wire between the FEM or REM and ground as follows: • **Does the inoperative lamp now illuminate?**	**Yes** For the front parking or side marker lamp, GO to U5 . For the rear parking lamp, GO to U6 . **No** For the front side marker, LEAVE the jumper wire connected. GO to U4 . All others, REPAIR the control ground circuit as necessary. TEST the system for normal operation.

Inoperative Lamp	Connector-Pin	Circuit
LH front side marker	FEM C201b-22	31S-LF8 (BK/OG)
RH front side marker	FEM C201b-11	31S-LF17 (BK/WH)
LH front parking/turn signal lamp	FEM C201c-2	31S-LF7 (BK/BU)
RH front parking/turn signal lamp	FEM C201c-10	31S-LF16 (BK/RD)

RH rear combination lamp	REM C420e-5	31S-LF20 (BK/OG)
LH and RH license plate lamp	REM C420a-5	31S-LF12 (BK/GN)

U4 CHECK THE SIDE MARKER LAMP	
• Disconnect: LH Headlamp C1021 or RH Headlamp C1041. • Measure the voltage between LH headlamp C1021-2, circuit 29S-LF8 (OG), harness side and LH headlamp C1021-5, circuit 31S-LF8 (BK/OG), harness side; or between RH headlamp C1041-2, circuit 29S-LF17 (OG/WH), harness side and RH headlamp C1041-5, circuit 31S-LF17 (BK/WH), harness side  • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new front side marker module. REFER to Headlamp Assembly in this section. TEST the system for normal operation. **No** REPAIR circuit 31S-LF8 (BK/OG) (LH side marker) or 31S-LF17 (BK/WH) (RH side marker) as necessary. TEST the system for normal operation.
U5 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been

	caused by a loose or corroded connector. REPEAT the self-test.
U6 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test V: The Parking, Rear Or License Lamps Are On Continuously

Normal Operation

The instrument cluster monitors the headlamp switch position by sending out voltage reference signals to the headlamp switch. If a problem is detected with the circuits to the headlamp switch, the instrument cluster will default the headlamps and parking lamps on. When the headlamp switch is in the parking lamps ON position, the instrument cluster sends a signal to the front electronic module (FEM) and the rear electronic module (REM) to illuminate the parking lamps. Power is supplied to the LH front side marker and parking lamp through circuits 29S-LF3 (OG/YE), 29S-LF7 (OG/BU), 29S-LF8 (OG) and 29S-LF16 (OG/GN). Ground for the LH front side marker flows through circuit 31S-LF8 (BK/OG) to the FEM. Ground for the LH front parking lamp flows through circuit 31S-LF16 (BK/RD) and then through circuit 31S-LF7 (BK/BU) to the FEM. Power is supplied to the RH front side marker and parking lamp through circuits 29S-LF4 (OG/BU), 29S-LF17 (OG/WH) and 29S-LF16 (OG/GN). Ground for the RH front side marker flows through circuit 31S-LF17 (BK/WH) to the FEM. Ground for the RH front parking lamp flows through circuit 31S-LF16 (BK/RD) to the FEM. Power is supplied to the LH rear parking lamp through circuit 29S-LF23 (OG). Ground for the LH rear parking lamp flows through circuit 31S-LF11 (BK/WH) to the rear electronic module (REM). Power is supplied to the RH rear parking lamp through circuits 29S-LF24 (OG/BK), and 29S-LF23 (OG). Ground for the RH rear parking lamp flows through circuit 31S-LF11 (BK/WH) and then circuit 31S-LF20 (BK/OG) to the REM. Power is supplied to the license lamps through circuits 29S-LG2 (OG/BU), 29S-LF12 (OG/BK), 29S-LF21 (OG/BK) and 29S-LF22 (OG/BK). Ground for the license lamps flows through circuits 31S-LF21 (BK/GN) and 31S-LF22 (BK/GN) and then through circuit 31S-LF12 (BK/GN) to the REM. The FEM and REM control the ground circuits individually for the lamps (the license lamps share a common ground controlled circuit at the REM).

Possible Causes

- Circuit 31S-LF8 (BK/OG) short to ground
- Circuit 31S-LF16 (BK/RD) short to ground
- Circuit 31S-LF7 (BK/BU) short to ground
- Circuit 31S-LF17 (BK/WH) short to ground
- Circuit 31S-LF11 (BK/WH) short to ground
- Circuit 31S-LF20 (BK/OG) short to ground
- Circuit 31S-LF21 (BK/GN) short to ground
- Circuit 31S-LF22 (BK/GN) short to ground
- Circuit 31S-LF12 (BK/GN) short to ground
- Circuit 8-LF14 (WH/BU) short to ground

- Headlamp switch
- Instrument cluster
- FEM
- REM

PINPOINT TEST V: THE PARKING, REAR OR LICENSE LAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
V1 CHECK THE EXTERIOR LAMPS	
• Observe the exterior parking lamps. • **Are all the parking lamps illuminated?**	**Yes** GO to V2 . **No** GO to V6 .
V2 CHECK THE HEADLAMP SWITCH INPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster headlamp switch status PID while rotating the knob to the parking lamps ON and then OFF positions. • **Does the PID match the headlamp switch position?**	**Yes** GO to V5 . **No** GO to V3 .
V3 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to V4 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
V4 CHECK CIRCUIT 8-LF14 (WH/BU) FOR A SHORT TO GROUND	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between headlamp switch C205-5, circuit 8-LF14 (WH/BU), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to V5 .
V5 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position.	**Yes** INSTALL a new instrument cluster.

• Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
V6 CHECK THE CONTROL GROUND CIRCUIT FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: REM C420a and C420e. • Disconnect: FEM C201b and C201c. • Key in ON position. • **Does the parking, rear or license lamps continue to illuminate?**	**Yes** REPAIR the control ground circuit as necessary. TEST the system for normal operation. **No** For the front lamp, GO to V7 . For the rear or license lamp, GO to V8 .
V7 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
V8 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Fog Lamps

Printable View (101 KB)

Refer to Wiring Diagrams Cell 86 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Headlamp switch	• Underhood auxiliary junction box (AJB) fuse 3 (15A) • Fog lamp relay • Circuitry • Front electronic module (FEM) • Instrument cluster

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for FEM, refer to Section 418-00 .
   - No response/not equipped for instrument cluster, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.

7. If the DTCs retrieved are related to the concern, go to Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index or Instrument Cluster Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 .

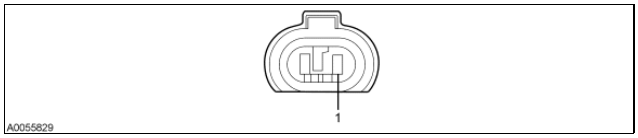
Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	Instrument cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster Self-Test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01 .
B2472	Fog Lamp Switch Failure	Instrument cluster	Go To Pinpoint Test X .

Symptom Chart

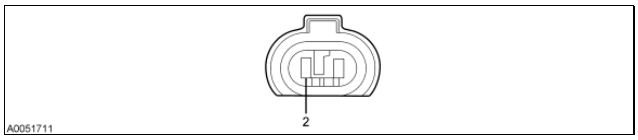
Symptom Chart
Connector Circuit Reference

LH Fog Lamp C152



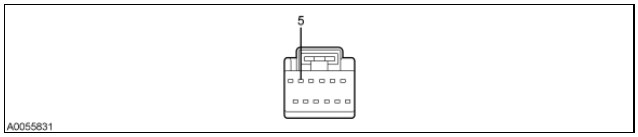
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-LD11 (BK/WH) fog lamp ground circuit	0 voltage, less than 5 ohms between the fog lamp and ground.

RH Fog Lamp C162



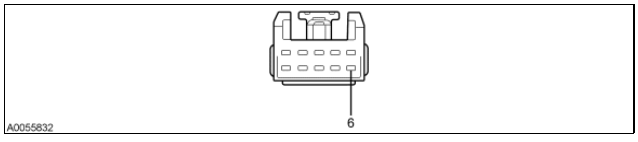
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-LD17 (BK/WH) fog lamp ground circuit	0 voltage, less than 5 ohms between the fog lamp and ground.

FEM C201c



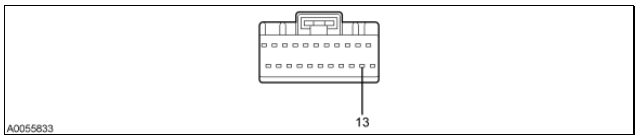
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31S-LD9 (BK/GN) fog lamp relay control ground circuit	Greater than 10 volts with the ignition switch in any position, less than 5 ohms between the FEM and the fog lamp relay.

Headlamp Switch C205



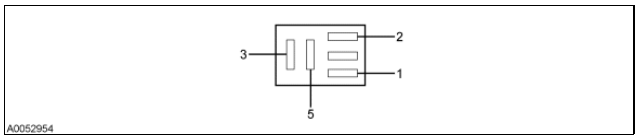
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	8-LD10 (WH/BK) fog lamp switch input circuit	Less than 5 ohms between the headlamp switch and the instrument cluster. Greater than 10,000 ohms between the headlamp switch and ground.

Instrument Cluster C220c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
13	8-LD10 (WH/BK) fog lamp switch input circuit	0 voltage, less than 5 ohms between the instrument cluster and the headlamp switch. Greater than 10,000 ohms between the instrument cluster and ground.

Fog Lamp Relay C1007



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30S-LD8B (RD) B+ power supply circuit	Greater than 10 volts with the ignition switch in any position.
2	31S-LD9 (BK/GN) fog lamp relay control ground circuit	0 voltage, less than 5 ohms between the fog lamp relay and the FEM. Greater than 10,000 ohms between the fog lamp relay and ground.
3	30S-LD8A (RD) B+ power supply circuit	Greater than 10 volts with the ignition switch in any position.
5	30S-LD2 (RD/BU) fog lamps switched power supply circuit	0 voltage, less than 5 ohms between the fog lamp relay and the fog lamps.

Pinpoint Test W: The Fog Lamps Are Inoperative

Normal Operation

The instrument cluster sends a voltage signal to the headlamp switch through circuit 8-LD10 (WH/BK). When the fog lamp switch is engaged, the signal is allowed to return to the instrument cluster. When the instrument

cluster detects that the fog lamp switch is engaged, a signal is sent to the front electronic module (FEM) via the SCP network to command the fog lamps ON. The fog lamp relay receives power from circuits 30S-LD8A (RD) and 30S-LD8B (RD). The fog lamp relay coil is grounded through circuit 31S-LD9 (BK/GN) to the FEM. When the FEM grounds circuit 31S-LD9 (BK/GN), the fog lamp relay is energized, switching power to circuit 30S-LD2 (RD/BU). Voltage then flows through circuits 30S-LD11 (RD/WH) and 30S-LD17 (RD/WH) to the LH and RH fog lamps, respectively. Ground for the LH fog lamp is through circuit 31-LD11 (BK/WH). Ground for the RH fog lamp is through circuit 31-LD17 (BK/WH).

Possible Causes

- Circuit 8-LD10 (WH/BK) open
- Circuit 31S-LD9 (BK/GN) open or short to power
- Circuit 30S-LD8A (RD) open
- Circuit 30S-LD8B (RD) open
- Circuit 30S-LD2 (RD/BU) open
- Fog lamp relay
- Headlamp switch
- Instrument cluster
- FEM

PINPOINT TEST W: THE FOG LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
W1 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster fog lamp switch status PID while rotating the knob to the parking lamps ON position and then engaging the fog lamp switch. • **Does the PID match the headlamp switch position?**	**Yes** GO to W5 . **No** GO to W2 .
W2 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to W3 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
W3 CHECK CIRCUIT 8-LD10 (WH/BK) FOR AN OPEN	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between instrument cluster C220c-13, circuit 8-LD10 (WH/BK), harness side and headlamp switch C205-6, circuit 8-LD10 (WH/BK), harness side.	**Yes** GO to W4 . **No** REPAIR the circuit. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms?**	
W4 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
W5 CHECK THE FOG LAMP RELAY	
• Key in OFF position. • Disconnect: Fog Lamp Relay C1007. • Carry out the fog lamp relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the fog lamp relay OK?**	**Yes** GO to W6 . **No** INSTALL a new fog lamp relay. TEST the system for normal operation.
W6 CHECK CIRCUITS 30S-LD8A (RD) AND 30S-LD8B (RD) FOR AN OPEN	
• Measure the voltage between fog lamp relay C1007-3, circuit 30S-LD8A (RD), harness side and ground; and between fog lamp relay C1007-1, circuit 30S-LD8B (RD), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to W7 . **No** REPAIR the circuit in question. TEST the system for normal operation.
W7 CHECK CIRCUIT 30S-LD2 (RD/BU) FOR AN OPEN	
• Connect a fused (15A) jumper wire between fog lamp relay C1007-3, circuit 30S-LD8A (RD), harness side and fog lamp relay C1007-5, circuit 30S-LD2 (RD/BU), harness side.	**Yes** REMOVE the jumper wire. GO to W8 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0057550 • **Do the fog lamps illuminate?**	
W8 CHECK CIRCUIT 31S-LD9 (BK/GN) FOR A SHORT TO POWER	
• Disconnect: FEM C201c. • Key in ON position. • Measure the voltage between fog lamp relay C1007-2, circuit 31S-LD9 (BK/GN), harness side and ground.  GN1460-A • **Is any voltage present?**	**Yes** GO to W9 . **No** REPAIR the circuit. TEST the system for normal operation.
W9 CHECK CIRCUIT 31S-LD9 (BK/GN) FOR AN OPEN	
• Key in OFF position. • Connect: Fog Lamp Relay C1007. • Connect a fused (10A) jumper wire between FEM C201c-5, circuit 31S-LD9 (BK/GN), harness side and ground.  A0057551 • **Do the fog lamps illuminate?**	**Yes** GO to W10 . **No** REPAIR the circuit. TEST the system for normal operation.
W10 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test X: The Fog Lamps Are On Continuously

Normal Operation

The instrument cluster sends a voltage signal to the headlamp switch through circuit 8-LD10 (WH/BK). When the fog lamp switch is engaged, the signal is allowed to return to the instrument cluster. When the instrument cluster detects that the fog lamp switch is engaged, a signal is sent to the front electronic module (FEM) via the SCP network to command the fog lamps ON. The fog lamp relay receives power from circuits 30-LD8A (RD) and 30-LD8B (RD). The fog lamp relay coil is ground through circuit 31S-LD9 (BK/GN) to the FEM. When the FEM grounds circuit 31S-LD9 (BK/GN), the fog lamp relay is energized, switching power to circuit 30S-LD2 (RD/BU). Voltage then flows through circuits 30S-LD11 (RD/WH) and 30S-LD17 (RD/WH) to the LH and RH fog lamps, respectively.

Possible Causes

- Circuit 8-LD10 (WH/BK) short to ground
- Circuit 31S-LD9 (BK/GN) short to ground
- Circuit 30S-LD11 (RD/WH) short to power
- Circuit 30S-LD17 (RD/WH) short to power
- Circuit 30S-LD2 (RD/BU) short to power
- Fog lamp relay
- Headlamp switch
- Instrument cluster
- FEM

PINPOINT TEST X: THE FOG LAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
X1 CHECK THE HEADLAMP SWITCH OUTPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Monitor the instrument cluster fog lamp switch status PID while rotating the knob to the parking lamps ON position and then engaging the fog lamp switch. • **Does the PID match the headlamp switch position?**	**Yes** GO to X5 . **No** GO to X2 .
X2 CHECK THE HEADLAMP SWITCH	
• Key in OFF position. • Disconnect: Headlamp Switch C205. • Carry out the headlamp switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the headlamp switch OK?**	**Yes** GO to X3 . **No** INSTALL a new headlamp switch. REFER to Headlamp Switch in this section. TEST the system for normal operation.
X3 CHECK CIRCUIT 8-LD10 (WH/BK) FOR A SHORT TO GROUND	
• Disconnect: Instrument Cluster C220c. • Measure the resistance between instrument cluster C220c-13, circuit 8-LD10 (WH/BK), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No**

 • **Is the resistance less than 5 ohms?**	GO to X4 .
X4 CHECK INSTRUMENT CLUSTER OPERATION	
• Key in OFF position. • Disconnect all instrument cluster connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
X5 CHECK THE FEM	
• Key in OFF position. • Disconnect: FEM C201c. • Key in ON position. • **Do the fog lamps continue to illuminate?**	**Yes** GO to X7 . **No** GO to X6 .
X6 CHECK FEM OPERATION	
• Key in OFF position. • Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
X7 CHECK CIRCUIT 30S-LD2 (RD/BU), 30S-LD11 (RD/WH) AND 30S-LD17 (RD/WH) FOR A SHORT TO POWER	
• Disconnect: Fog Lamp Relay C1007. • **Do the fog lamps continue to illuminate?**	**Yes** REPAIR the circuit as necessary. TEST the system for normal operation. **No** GO to X8 .
X8 CHECK THE FOG LAMP RELAY	
• Carry out the fog lamp relay component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information.	**Yes** REPAIR circuit 31S-LD9 (BK/GN). TEST the system for normal operation. **No**

• **Is the fog lamp relay OK?**	INSTALL a new fog lamp relay. TEST the system for normal operation.

Reversing Lamps

Printable View (67 KB)

Refer to Wiring Diagrams Cell 93 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Digital transmission range (TR) sensor	• Battery junction box (BJB) fuse 6 (10A) (reversing lamps) • Circuitry • Bulbs • Rear electronic module (REM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for REM, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM.

7. If the DTCs retrieved are related to the concern, go to Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index.

8. If multiple symptoms exist, check the Switched System Power (SSP) Relay Index before proceeding to the next step. Refer to Headlamps in this section.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

NOTE: For a complete master list of DTCs, refer to Section 418-00 .

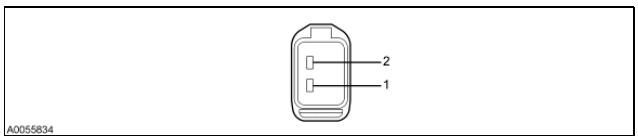
Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	REM	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new REM if DTC B1342 is retrieved again. REFER to Section 419-10 .

Symptom Chart

Symptom Chart
Connector Circuit Reference

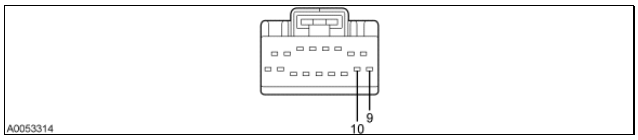
LH Reversing Lamp C451, RH Reversing Lamp C461



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C451)	31S-LG9 (BK/GN) reversing lamp control ground circuit	0 voltage, less than 5 ohms between the reversing lamp and the REM. Greater than 10,000 ohms between the reversing lamp and ground.
2 (C451)	29S-LG9 (OG/BK) reversing lamp power supply circuit	Greater than 10 volts with the ignition ON.
1 (C461)		

	31S-LG16 (BK/RD) reversing lamp control ground circuit	0 voltage, less than 5 ohms between the reversing lamp and the REM. Greater than 10,000 ohms between the reversing lamp and ground.
2 (C461)	29S-LG16 (OG/GN) reversing lamp power supply circuit	Greater than 10 volts with the ignition ON.

REM C420e



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
9	31S-LG9 (BK/GN) LH reversing lamp control ground circuit	Greater than 10 volts with the ignition ON. Greater than 10,000 ohms between the REM and ground.
10	31S-LG16 (BK/RD) RH reversing lamp control ground circuit	Greater than 10 volts with the ignition ON. Greater than 10,000 ohms between the REM and ground.

Pinpoint Test Y: The Reversing Lamps Are Inoperative

Normal Operation

The powertrain control module (PCM) monitors the digital transmission range (TR) sensor. When the PCM detects the transmission in REVERSE, a signal is sent to the rear electronic module (REM) to illuminate the reversing lamps. Power from the battery junction box (BJB) is sent through circuit 29S-LG1 (OG/YE) to circuits 29S-LG9 (OG/BK) and 29S-LG16 (OG/GN) to the LH and RH reversing lamps respectively. Ground for the LH reversing lamp is sent through circuit 31S-LG9 (BK/GN) to the REM. Ground for the RH reversing lamp is sent through circuit 31S-LG16 (BK/RD) to the REM. The REM individually controls the ground circuits for the reversing lamps.

Possible Causes

- REM
- PCM

PINPOINT TEST Y: THE REVERSING LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
Y1 CHECK THE VOLTAGE SUPPLY TO THE REVERSING LAMPS	
• Key in ON position. • Place the multifunction switch in the LH turn position and observe the LH rear turn signal.	**Yes** GO to Y2 . **No**

• **Does the LR turn signal operate correctly?**	REFER to Turn Signal and Hazard Lamps to continue diagnostics.
Y2 CHECK THE PCM	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Engage the parking brake. • Monitor the PCM transmission gear status PID while placing the transmission in reverse and then neutral. • **Does the PID match the transmission gear selected?**	**Yes** GO to Y4 . **No** GO to Y3 .
Y3 CHECK FOR PCM OPERATION	
• Key in OFF position. • Disconnect all PCM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all PCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
Y4 CHECK REAR ELECTRONIC MODULE (REM) OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test Z: The Individual Reversing Lamp Is Inoperative

Normal Operation

When the powertrain control module (PCM) detects the transmission in REVERSE, a signal is sent to the rear electronic module (REM) to illuminate the reversing lamps. Power from the battery junction box (BJB) is sent through circuit 29S-LG1 (OG/YE) to circuits 29S-LG9 (OG/BK) and 29S-LG16 (OG/GN) to the LH and RH reversing lamps, respectively. Ground for the LH reversing lamp is sent through circuit 31S-LG9 (BK/GN) to the REM. Ground for the RH reversing lamp is sent through circuit 31S-LG16 (BK/RD) to the REM. The REM individually controls the ground circuits for the reversing lamps.

Possible Causes

- Circuit 29S-LG9 (OG/BK) open
- Circuit 29S-LG16 (OG/GN) open

- Circuit 31S-LG9 (BK/GN) open or short to power
- Circuit 31S-LG16 (BK/RD) open or short to power
- REM

PINPOINT TEST Z: THE INDIVIDUAL REVERSING LAMP IS INOPERATIVE

Test Step	Result / Action to Take
Z1 CHECK THE CIRCUIT 29S-LG9 (OG/BK) OR 29S-LG16 (OG/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: Inoperative Reversing Lamp. • Key in ON position. • Measure the voltage between LH reversing lamp C451-2, circuit 29S-LG9 (OG/BK), harness side and ground; or between RH reversing lamp C461-2, circuit 29S-LG16 (OG/GN), harness side and ground.  A0057553 • **Is the voltage greater than 10 volts?**	**Yes** GO to Z2 . **No** REPAIR the circuit in question. TEST the system for normal operation.
Z2 CHECK THE CIRCUIT 31S-LG9 (BK/GN) OR 31S-LG16 (BK/RD) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: REM C420e. • Key in ON position. • Measure the voltage between LH reversing lamp C451-1, circuit 31S-LG9 (BK/GN), harness side and ground; or between RH reversing lamp C461-1, circuit 31S-LG16 (BK/RD), harness side and ground.  A0057554 • **Is any voltage present?**	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to Z3 .
Z3 CHECK THE CIRCUIT 31S-LG9 (BK/GN) OR 31S-LG16 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between LH reversing lamp C451-1, circuit 31S-LG9 (BK/GN), harness side and REM C420e-9, circuit 31S-LG9 (BK/GN), harness side; or between RH reversing lamp C461-1, circuit 31S-LG16 (BK/RD), harness side and REM	**Yes** GO to Z4 . **No** REPAIR the circuit in question. TEST the

C420e-10, circuit 31S-LG16 (BK/RD), harness side.  • **Is the resistance less than 5 ohms?**	system for normal operation.
Z4 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test AA: The Reversing Lamp Are On Continuously

Normal Operation

The powertrain control module (PCM) monitors the digital transmission range (TR) sensor. When the PCM detects the transmission in REVERSE, a signal is sent to the rear electronic module (REM) to illuminate the reversing lamps. Ground for the LH reversing lamp is sent through circuit 31S-LG9 (BK/GN) to the REM. Ground for the RH reversing lamp is sent through circuit 31S-LG16 (BK/RD) to the REM. The REM individually controls the ground circuits for the reversing lamps.

Possible Causes

- Circuit 31S-LG9 (BK/GN) short to ground
- Circuit 31S-LG16 (BK/RD) short to ground
- REM
- PCM

PINPOINT TEST AA: THE REVERSING LAMPS ARE ON CONTINUOUSLY

Test Step	Result / Action to Take
AA1 CHECK THE REVERSING LAMPS	
• Key in ON position. • Observe the reversing lamps. • **Are both reversing lamps illuminated?**	**Yes** GO to AA2 . **No** GO to AA4 .
AA2 CHECK THE PCM	

• Key in OFF position. • Disconnect: PCM C175a. • Key in ON position. • **Do the reversing lamps continue to illuminate?**	**Yes** GO to AA5 . **No** GO to AA3 .
AA3 CHECK PCM OPERATION	
• Key in OFF position. • Disconnect all PCM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all PCM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.
AA4 CHECK THE REM	
• Key in OFF position. • Disconnect: REM C420e. • Key in ON position. • **Does the reversing lamp continue to illuminate?**	**Yes** REPAIR circuit 31S-LG9 (BK/GN) (LH reversing lamp) or 31S-LG16 (BK/RD) (RH reversing lamp) as necessary. TEST the system for normal operation. **No** GO to AA5 .
AA5 CHECK REM OPERATION	
• Key in OFF position. • Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Headlamp Adjustment

Printable View (60 KB)

Headlamp Aiming

1. The headlamp aiming procedure depends on what type of beam pattern the headlamp is equipped with. Vehicles may come equipped with visual optical left (VOL), visual optical right (VOR) or SAE only (includes sealed beam type) headlamps. To identify the headlamp beam pattern, look on the headlamp lens. Molded in small letters on the headlamp lens is one of the following:
    - SAE
    - VOL and SAE
    - VOR and SAE

2. Once the headlamp beam pattern is identified, aim the headlamps using one of the following methods as applicable.
    - Photometric aimers can aim VOL-, VOR- and SAE-type headlamps only. This is the preferred method of headlamp aiming.
    - Visual or screen method aiming can be used to aim VOL-, VOR- and SAE-type headlamps only.
    - Mechanical aimers cannot be used with VOR- or VOL-type headlamps. Aerodynamic lamps that can be aimed mechanically have 3 nibs molded into the lens of the lamp.

Photometric Aiming

1. For the photometric aiming procedure, refer to the appropriate photometric headlamp aimer instruction manual.

Screen Method Aiming

All headlamp types

NOTE: Horizontal aim is not necessary for VOL or VOR headlamps.

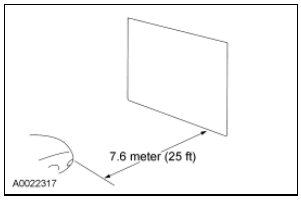
NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

NOTE: The sight shield may need to be positioned or removed for access to the adjusters.

1. Before starting headlamp adjustment:
    - check the tire inflation.
    - check that no other load is in the vehicle other than a half tank of fuel.
    - check that the headlamps are clean.
    - check for correct headlamp operation.
    - check that the vehicle is on level ground.
    - if the vehicle is equipped with air suspension, make sure that the switch is on.

2. **NOTE:** The vertical wall or screen must be a minimum of 2.4 m (8 ft) wide.

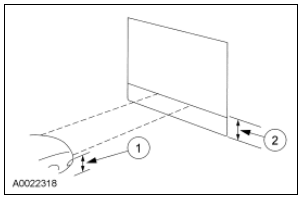
   Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.



3. **NOTE:** The center of the lamp is marked either on the lens (circle, crosshair or other mark) or on the bulb shield internal to the lamp (crosshair or other mark).

   Mark a horizontal reference line on the vertical wall or screen.

   1. Measure the center of the headlamp height to ground and record the measurement.
   2. Make a 2.4-meter (8-ft) horizontal mark (using masking tape) on the vertical wall or screen at the same distance from the ground as previously recorded.



4. **NOTE:** This procedure should be done in a dark environment to effectively see the headlamp beam pattern.

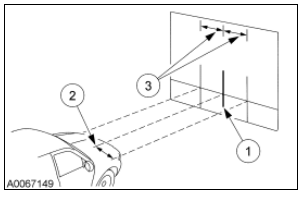
   Turn on the low beam headlamps to illuminate the wall or screen and open the hood.

5. **NOTE:** For SAE-type headlamps, the appearance of the beam pattern may vary between vehicles.

   On the wall or screen, locate the high intensity area of the beam pattern. Place the top edge of the high intensity zone even with the horizontal reference line.

SAE-type headlamps only

6. In addition to the horizontal line marked in Step 3, a pair of vertical lines must be marked at the center line of the headlamps on the wall or screen.
   1. Mark the center line of the vehicle on the wall or screen.
   2. Measure from the center of the headlamp to the center line of the vehicle.
   3. Make two 1.5-meter (5-ft) vertical marks (using masking tape) on the wall or screen at the same distance from the vehicle center line as previously recorded.

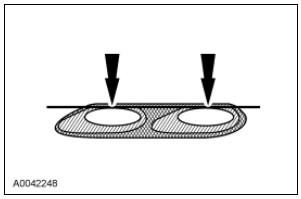


7. On the wall or screen, locate the high intensity area of the beam pattern. Place the left edge of the high intensity zone even with the vertical line corresponding to the headlamp being adjusted.

VOR-type headlamps

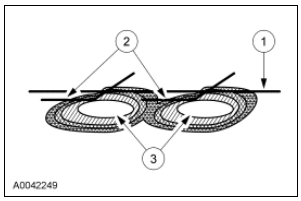
8. **NOTE:** The appearance of the VOR beam pattern may vary between vehicles.

Identify at the top edge of this high intensity area a distinct horizontal cutoff in the beam pattern. If the top edge of this cutoff is not even with the horizontal reference line, the headlamp beam needs to be adjusted.



VOL-type headlamps

9. For VOL-type headlamps, there is a distinct cutoff in the left portion of the beam pattern. The edge of this cutoff should be positioned 50.2 mm (2 in) below the horizontal reference line.
    1. Horizontal reference line.
    2. Top edge of the beam pattern.
    3. High intensity zone.



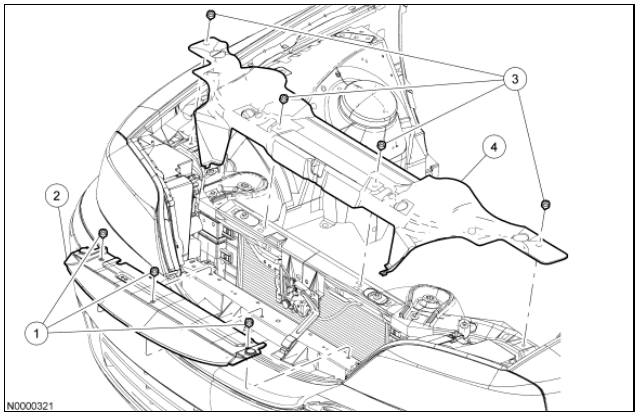
Mechanical Aiming

1. For the mechanical aiming procedure, refer to the appropriate mechanical headlamp aimer instruction manual.

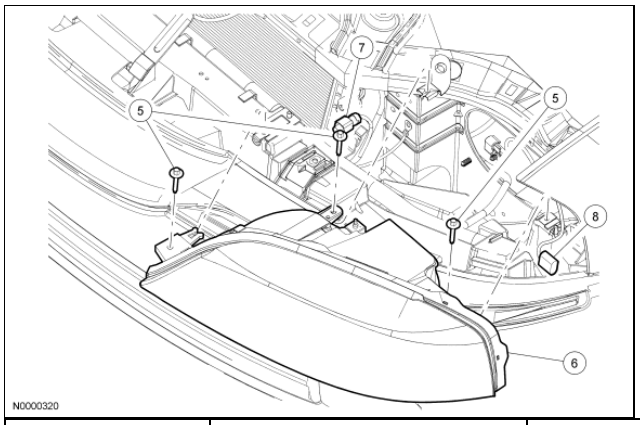
Headlamp Assembly

Printable View (324 KB)

NOTE: Make sure the headlamp switch and ignition switch are in the OFF position.



Item	Part Number	Description
1		Pin-type retainers
2	8C300	Radiator grille opening cover
3		Pin-type retainers
4	8C291	Radiator sight shield

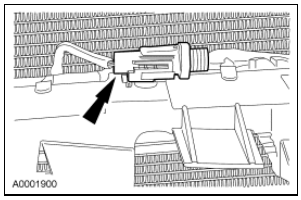


Item	Part Number	Description
5	N606679-S	Headlamp bolts
6	13008	Headlamp assembly
7	14290	Electrical connector
8	13411	Parking/turn lamp

Removal and Installation

1. Remove the 3 radiator grille opening cover pin-type retainers.

2. Position the ambient air temperature sensor aside.



3. Remove the radiator grille opening cover.

4. Remove the 4 radiator sight shield pin-type retainers.

5. Remove the radiator sight shield.

6. Remove the 3 headlamp bolts.

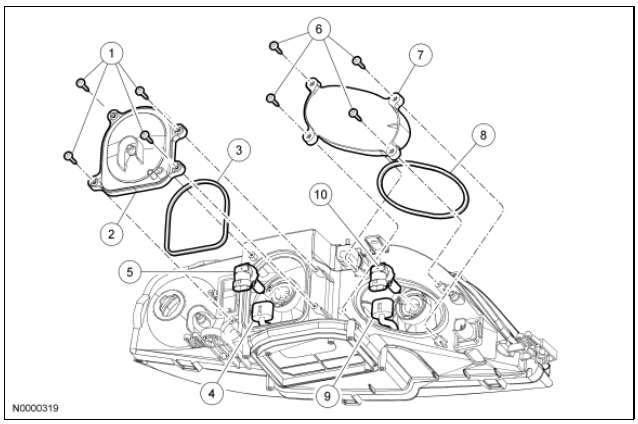
7. Remove the headlamp assembly.

8. Disconnect the electrical connector.

9. To install, reverse the removal procedure.

Headlamp Bulb

Printable View (124 KB)



Item	Part Number	Description
1	13378	Low beam access cover screws (4 required)
2	13071	Low beam access cover
3	13022	Low beam access cover seal
4		Electrical connector (part of 13008)
5	13N021	Low beam bulb
6	13378	High beam access cover screws (4 required)
7	13071	High beam access cover
8	13022	High beam access cover seal
9		Electrical connector (part of 13008)
10	13N021	High beam bulb

Removal and Installation

High and low beam bulbs

1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.

Low beam bulb only

2. Remove the 4 low beam access cover screws.

3. Remove the low beam access cover and seal.

4. Disconnect the electrical connector.

⚠ WARNING: The headlamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp with the bulb removed from the headlamp.

5. Remove the bulb.

6. To install, reverse the removal procedure.

High beam bulb only

7. Remove the 4 high beam access cover screws.

8. Remove the high beam access cover and seal.

9. Disconnect the electrical connector.

⚠ **WARNING: The headlamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.**

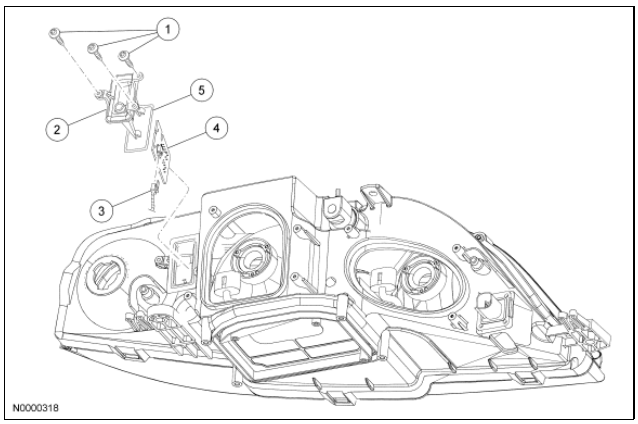
NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp with the bulb removed from the headlamp.

10. Remove the bulb.

11. To install, reverse the removal procedure.

Side Lamp/Front Turn Signal Lamp Bulb

Printable View (117 KB)



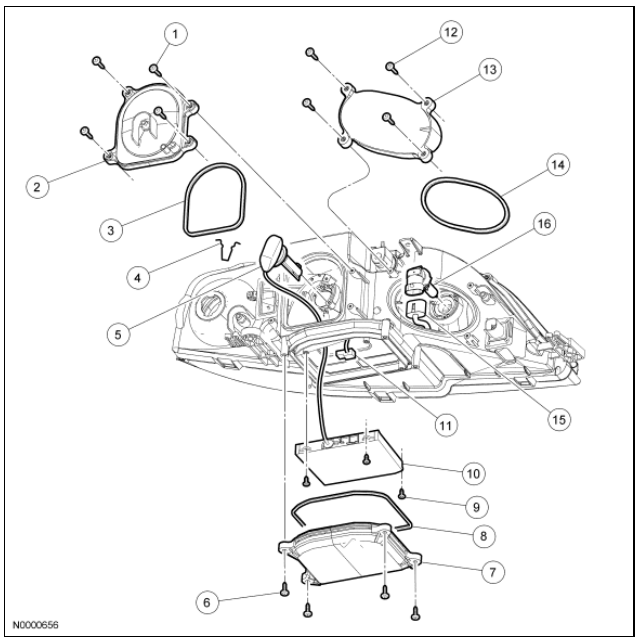
Item	Part Number	Description
1		Side marker module screw (part of 13008)
2		Side marker module bracket (part of 13008)
3		Electrical connector (part of 13008)
4		Side marker module (part of 13008)
5		Side marker module seal (part of 13008)

Removal and Installation

1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.
2. Remove the 3 side marker module screws.
3. Remove side marker module bracket and seal.
4. Disconnect the electrical connector.
5. Remove the side marker module.
6. To install, reverse the removal procedure.

Headlamp Bulb High Intensity Discharge (HID)

Printable View (143 KB)



Item	Part Number	Description
1	13378	Low beam access cover screws (4 required)
2	13071	Low beam access cover
3	13022	Low beam access cover seal
4		High intensity discharge (HID) lamp retainer (part of 13008)
5	13D109	HID low beam bulb
6	13378	Ballast access cover screws (4 required)
7	13180	Ballast access cover
8	13160	Ballast access cover seal
9		Ballast screws (3 required)
10	13C170	Ballast and bulb assembly
11		Electrical connector (part of 13008)
12	13378	Screws (4 required)
13	13071	High beam access cover
14	13160	High beam access cover seal
15		Electrical connector (part of 13008)
16	13N021	High beam bulb

Removal and Installation

High and low beam bulbs

1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.

Low beam bulb only

2. Remove the 4 low beam access cover screws.
3. Remove the low beam access cover and seal.
4. Remove the 4 ballast access cover screws.
5. Remove the ballast access cover and seal.
6. Remove the 3 ballast screws.
7. Disconnect the electrical connector.
8. Remove the ballast.

⚠ WARNING: The headlamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp with the bulb removed from the headlamp.

9. Remove the bulb.
10. To install, reverse the removal procedure.

High beam bulb only

11. Remove the 4 high beam access cover screws.
12. Remove the high beam access cover and seal.
13. Disconnect the electrical connector.

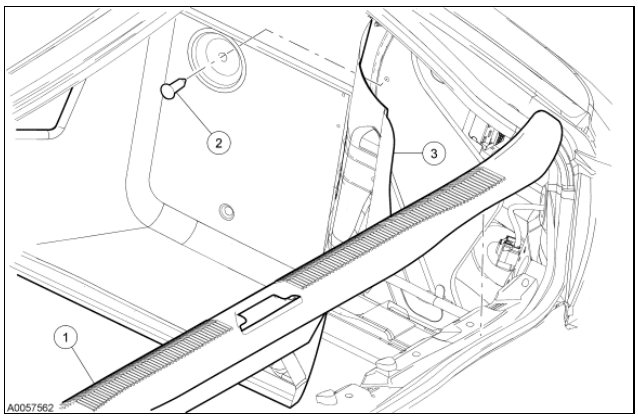
⚠ WARNING: The headlamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp with the bulb removed from the headlamp.

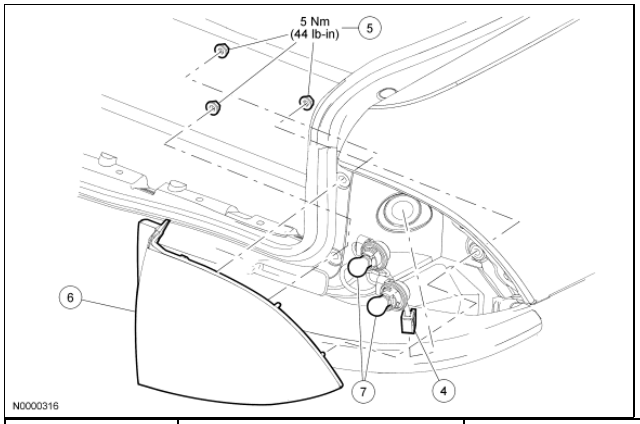
14. Remove the bulb.
15. To install, reverse the removal procedure.

Rear Lamp Assembly

Printable View (195 KB)



Item	Part Number	Description
1	54406A64	Luggage compartment scuff plate
2		Pin type retainer
3	5445422	Luggage compartment side trim panel



Item	Part Number	Description
4	13A409	Electrical connector
5	N621925-S	Rear lamp nuts (3 required)
6	13B504	Rear lamp assembly
7	13A409	Rear lamp bulb sockets

Removal and Installation

1. Remove the luggage compartment scuff plate.

2. Remove the luggage compartment side trim panel pin type-retainer.

3. Position aside the luggage compartment side trim panel.

4. Remove the 3 rear lamp nuts.
   - To install, tighten to 5 Nm (44 lb-in).

5. Disconnect the electrical connector.

6. Remove the rear lamp bulb sockets.

7. To install, reverse the removal procedure.

Rear Lamp Bulb

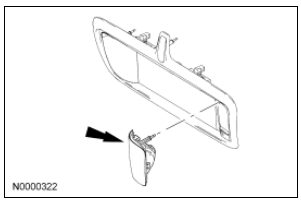
Printable View (7 KB)

Removal and Installation

1. Remove the rear lamp assembly. For additional information, refer to Rear Lamp Assembly in this section.
2. Remove the rear lamp bulb.
3. To install, reverse the removal procedure.

Reversing Lamp Assembly

Printable View (21 KB)



Item	Part Number	Description
1	15500	Reversing lamp assembly

Removal and Installation

1. Remove the license plate housing. For additional information, refer to Section 501-00 .
2. Remove the reversing lamp assembly.
3. To install, reverse the removal procedure.

Reversing Lamp Bulb

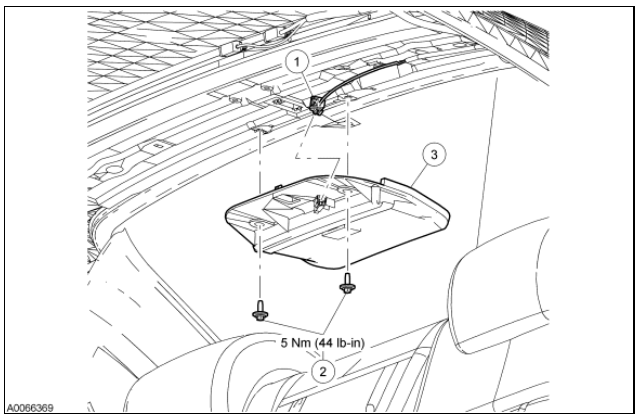
Printable View (7 KB)

Removal and Installation

1. Remove the reversing lamp assembly. For additional information, refer to Reversing Lamp Assembly in this section.
2. Remove the bulb.
3. To install, reverse the removal procedure.

High Mounted Stoplamp

Printable View (92 KB)



Item	Part Number	Description
1	14A005	Electrical connector
2	W706681-S900	High-mounted stoplamp screws (2 required)
3	13A613	High-mounted stoplamp

Removal and Installation

1. Remove the rear seat bolsters. For additional information, refer to Section 501-10 .
2. Position the rear quarter trim panels aside.
3. Remove the rear passenger assist handles.

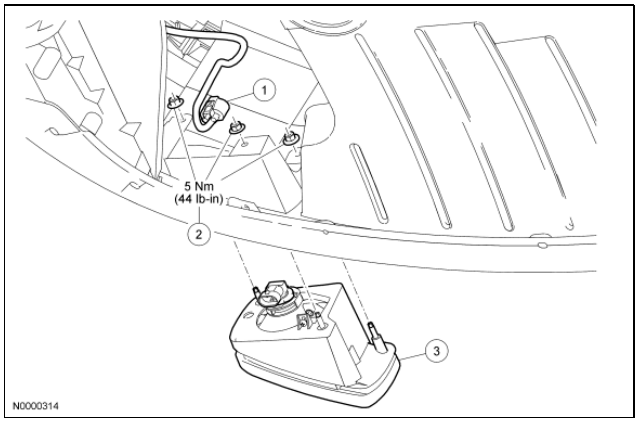
⚠ CAUTION: Do not excessively lower the rear portion of the headliner. This can create creases or kinks in the headliner.

4. Position the headliner aside.
5. Disconnect the electrical connector.
6. Remove both the high-mounted stoplamp screws.
   - To install, tighten to 5 Nm (44 lb-in).
7. Remove the high-mounted stoplamp.
8. To install, reverse the removal procedure.

Fog Lamp

Printable View (78 KB)

NOTE: Make sure the headlamp switch and ignition switch are in the OFF position.



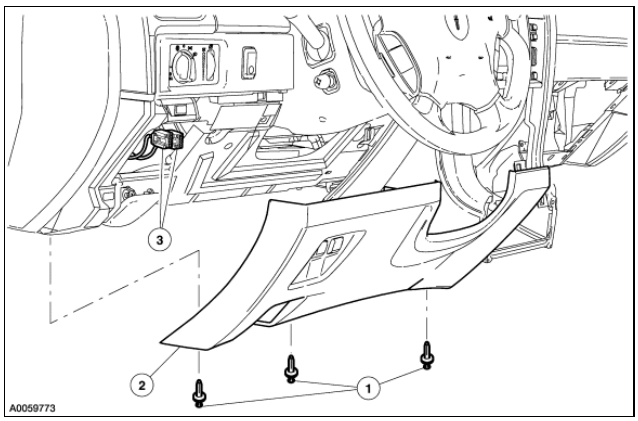
Item	Part Number	Description
1	14290	Electrical connector
2	N621906-S	Fog lamp nuts (3 required)
3	15A255	Fog lamp assembly

Removal and Installation

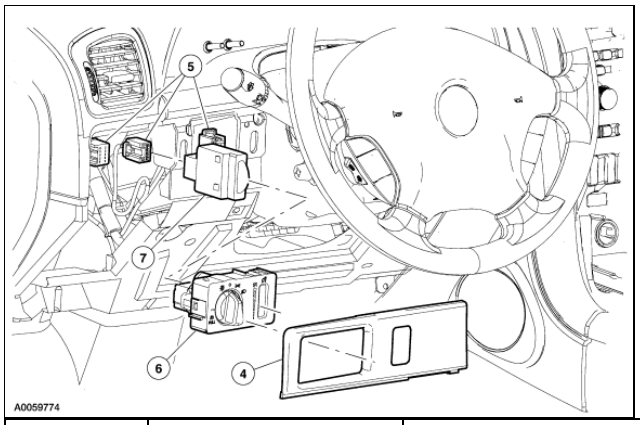
1. Remove the 3 fog lamp nuts.
   - To install, tighten to 5 Nm (44 lb-in).
2. Disconnect the electrical connector.
3. Remove the fog lamp assembly.
4. To install, reverse the removal procedure.

Headlamp Switch

Printable View (214 KB)



Item	Part Number	Description
1		Instrument panel steering column cover pin-type retainers
2	04459	Instrument panel steering column cover
3	14401	Electrical connectors



Item	Part Number	Description
4	54044B89	Outer instrument panel finish panel
5	14401	Electrical connectors
6	13K196	Headlamp switch
7	13K196	Dimmer switch

Removal and Installation

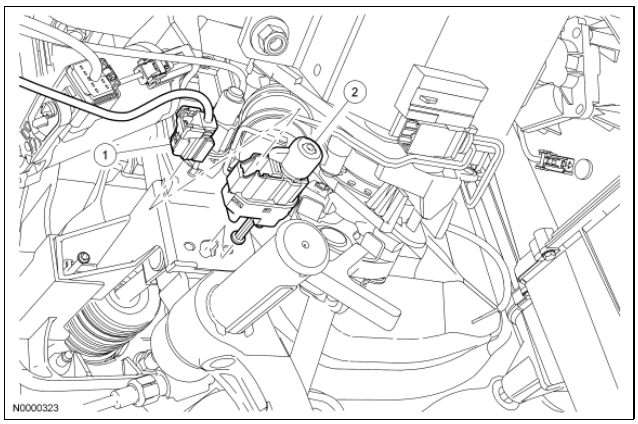
1. Remove the 3 instrument panel steering column cover pin-type retainers.
2. Remove the instrument panel steering column cover.
3. Disconnect the electrical connectors.
4. Remove the outer instrument panel finish panel.
5. Disconnect the electrical connectors.

6. Remove the headlamp switch.

7. To install, reverse the removal procedure.

Stoplamp Switch

Printable View (184 KB)



Item	Part Number	Description
1	14A005	Electrical connector
2	13480	Brake pedal position (BPP) switch

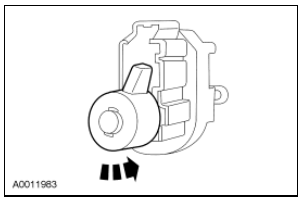
Removal

1. Disconnect the electrical connector.
2. Remove the BPP switch.

Installation

⚠ CAUTION: Initial installation of the BPP switch allows for one adjustment. If additional adjustments are required, install a new BPP switch.

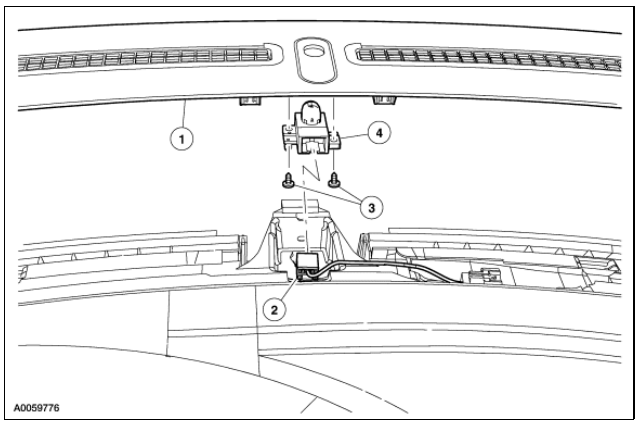
1. To unlock, rotate the knob counterclockwise to the stop.



2. With the engine running, fully depress the brake pedal.
3. Install the BPP switch and slowly release the brake pedal.

Light Sensor

Printable View (52 KB)



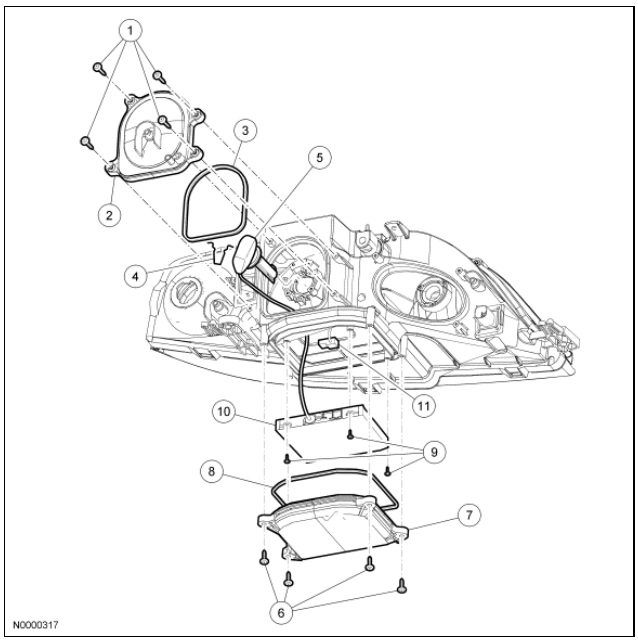
Item	Part Number	Description
1	54044E82	Instrument panel defroster grille
2	19A657	Electrical connector
3	A2906	Photocell screws (2 required)
4	14A597	Photocell

Removal and Installation

1. Remove the LH and RH windshield side garnish mouldings. For additional information, refer to Section 501-05 .
2. Remove the instrument panel defroster grille.
3. Disconnect the electrical connector.
4. Remove both photocell screws.
5. Remove the photocell.
6. To install, reverse the removal procedure.

Ballast

Printable View (134 KB)



Item	Part Number	Description
1	13378	Low beam access cover screws (4 required)
2	13071	Low beam access cover
3	13022	Low beam access cover seal
4		High intensity discharge (HID) lamp retainer (part of 13008)
5	13D109	HID low beam bulb
6	13378	Ballast access cover screws (4 required)
7	13180	Ballast access cover
8	13160	Ballast access cover seal
9		Ballast screws (3 required)
10	13C170	Ballast and bulb assembly
11		Electrical connector (part of 13008)

Removal and Installation

1. Remove the headlamp assembly. For additional information, refer to Headlamp Assembly in this section.
2. Remove the 4 low beam access cover screws.
3. Remove the low beam access cover and seal.
4. Remove the 4 ballast access cover screws.
5. Remove the ballast access cover and seal.

6. Remove the 3 ballast screws.
7. Disconnect the electrical connector.
8. Remove the ballast

⚠ WARNING: The headlamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.

NOTE: The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp with the bulb removed from the headlamp.

9. Remove the bulb.
10. To install, reverse the removal procedure.

Interior Lighting

Printable View (12 KB)

The interior lighting system consists of two subsystems: The interior lamps and the demand lamps.

The interior lamps are controlled by the front electronics module (FEM). The interior lamp subsystem consists of the left and right puddle lamps, footwell lamps, map lamps and the grab handle lamps. The FEM controls the interior lamps by providing the ground circuit when a door ajar is detected.

The demand lamps subsystem consists of the glove compartment lamp, luggage compartment lamp, front map lamps, left and right vanity mirror lamps and the rear grab handle reading lamps. Each of these lamps are switched individually and share a common ground circuit.

Both subsystems use the same power supply circuit through switched system power (SSP) relay 3, with the exception of the luggage compartment lamp which is powered through SSP relay 4.

Principles of Operation

NOTE: A new front electronic module (FEM) or rear electronic module (REM) must be reconfigured before installing. REFER to Section 418-01 .

The electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician, it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- whether the module which received the input (message) controls the output of the feature, or whether it outputs a message over the SCP communication network to another module.
- which module controls the output of the feature.

FEM Operation

This system is unique in that many of the inputs the FEM receives are delivered via the SCP communication network. These input messages come from other modules connected to the network, such as the rear electronics module (REM), driver door module (DDM), and instrument cluster. The FEM interprets the inputs and, in turn, commands the correct output. The FEM also receives inputs which come directly from components hardwired to the module, such as the front door ajar switches.

Interior Lighting

The FEM controls the outputs to all interior lighting. The lamps are illuminated if any door is ajar. The front door switches are hardwired to the FEM. When either of the two doors is opened, the FEM commands the interior lamps on by supplying the ground circuit. The rear door ajar switches are hardwired to the REM. When any of these doors are ajar, the REM sends a command through the SCP network to the FEM. The FEM then commands the appropriate interior lamps on.

Fault management of the interior lamps provides limited functionality in the event of certain dome or lighting mode inputs, vehicle speed or ignition switch failures. All interior lighting is powered by the switched system

power (SSP) feature (see below). A failure of any or all of the SSP feature(s) could cause inoperative interior lighting. When diagnosing the interior lighting, it is essential to determine if all relative symptoms and DTCs are controlled by the SSP feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in the sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (inputs) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. Each relay, when energized, will supply power to multiple features/functions. For additional information, refer to the SSP Relay Index for diagnosis and testing of SSP-related issues.

Interior Lighting

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Wiring harness • Loose or corroded connections • Battery junction box (BJB) fuses: ♦ 4 (10A) ♦ 5 (10A) ♦ 23 (30A) ♦ 24 (30A) ♦ 25 (40A) ♦ 27 (30A) ♦ 32 (30A) • Central junction box (CJB) fuse 20 (10A) • Lamp(s) • Relay(s) • Headlamp switch • Instrument cluster • Dimmer switch • FEM • REM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
    - SCP+, SCP-, ISO, CAN or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
    - No response/not equipped for FEM, REFER to Section 419-10 .
    - No response/not equipped for REM, REFER to Section 419-10 .
    - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM and REM.

7. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index or REM Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	Go To Pinpoint Test C .
B1327	Passenger Door Ajar Circuit Failure	FEM	Go To Pinpoint Test C .
B1342	ECU Is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 .
B2477	Module Configuration Failure	FEM	REFER to Section 418-01 .

REM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B2245	Passenger Rear Door Ajar Circuit Open	REM	Go To Pinpoint Test C .
B1331	Luggage Compartment Ajar Rear Door Circuit Failure	REM	Go To Pinpoint Test E .
B1342	ECU Is Defective	REM	CLEAR the DTC. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new REM. REFER to Section 419-10

			.
B2243	Diver Rear Door Ajar Circuit Open	REM	Go To Pinpoint Test C .
B2477	Module Configuration Failure	REM	REFER to Section 418-01 .

SSP Relay Index

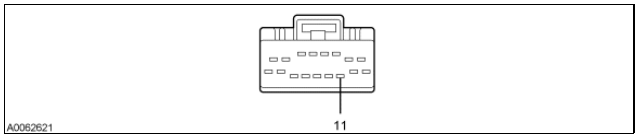
Relay	Fuse	Controlled System(s)
SSP1	BJB fuse 27 (30A)	• Driver power door lock (FEM) • LH high beam headlamps (FEM) • RH front park/turn/side marker lamps (FEM) • RH low beam headlamp • Driver exterior rear view mirror • LH front park/turn/side marker lamps (FEM)
SSP2	BJB fuse 32 (30A)	• LH low beam headlamp (FEM) • RH high beam headlamps (FEM) • Passenger exterior rear view mirror (FEM) • Switch illumination backlighting
SSP3	BJB fuse 24 (30A)	• High mounted stop lamp (REM) • RH rear park/stop lamps (REM) • Reversing lamps (REM) • LH rear turn signals (REM) • interior and demand lighting (FEM)
SSP4	BJB fuse 23 (30A)	• LH rear park/stop lamps (REM) • RH rear turn signals (REM) • All passenger door locks (REM) • License lamps • Luggage compartment release solenoid/switch • Fuel door release solenoid/switch • Luggage compartment lamp

When diagnosing an SSP relay, check that all systems for that relay are inoperative. Refer to Section 417-01 .

Symptom Chart

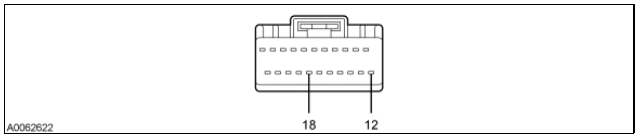
Symptom Chart
Connector Circuit Reference

FEM C201a



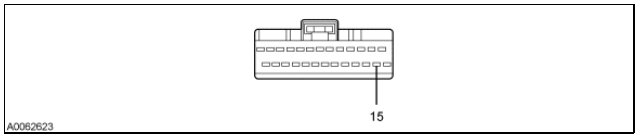
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	31-DK20 (BK/RD) FEM power ground	Less than 5 ohms between FEM and ground with FEM disconnected.

FEM C201b



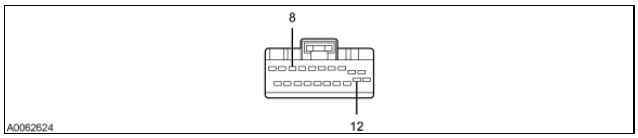
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	9-LC36 (BN) RH front puddle lamp ground circuit	Greater than 10 volts between FEM and ground with FEM disconnected. Less than 5 ohms between FEM and RH front puddle lamp.
18	9-LC34 (BN) LH front puddle lamp ground circuit	Greater than 10 volts between FEM and ground with FEM disconnected. Less than 5 ohms between FEM and LH front puddle lamp.

FEM C201e



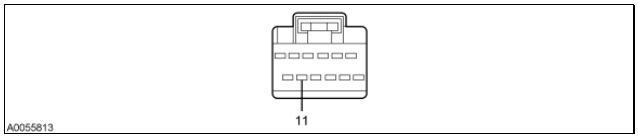
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15	31S-GL47 (BK/BU) Passenger door ajar switch power circuit	Less than 5 ohms between FEM and ground with passenger door open. Greater than 10,000 ohms between FEM and ground with passenger door closed.

FEM C201f



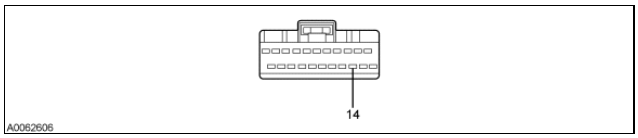
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	31S-GL46 (BK/YE) Driver door ajar switch power circuit	Less than 5 ohms between FEM and ground with driver door open. Greater than 10,000 ohms between FEM and ground with driver door closed.
12	31S-LC3 (BK/BU) Interior lamp ground circuit between auxiliary junction box and FEM	Greater than 10 volts between FEM and ground. Greater than 10,000 ohms between FEM and ground.

REM C420a



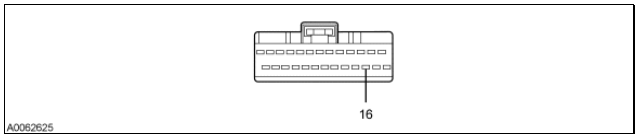
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	31S-LB25 (BK/BU) Luggage compartment lamp power circuit	Greater than 10 volts between REM and ground. Greater than 10,000 ohms between REM and ground.

REM C420b



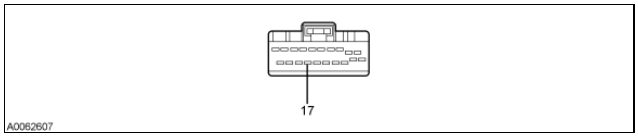
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
14	8-GL20 (WH/BK) Luggage compartment lid ajar switch power circuit	Less than 5 ohms between REM and ground with luggage compartment lid open. Greater than 10,000 ohms between REM and ground with luggage compartment lid closed.

REM C420c



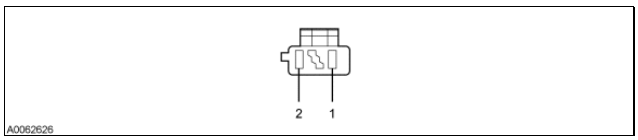
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
16	31S-GL12 (BK/OG) LH rear door ajar switch power circuit	Greater than 10,000 ohms between REM and ground with LH rear door closed. Less than 5 ohms between REM and ground with LH rear door open.

REM C420d



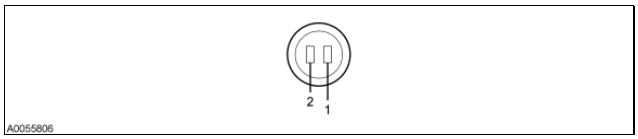
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
17	31S-GL19 (BK/GN) RH rear door ajar switch power circuit	Greater than 10,000 ohms between REM and ground with RH rear door closed. Less than 5 ohms between REM and ground with RH rear door open.

Glove Compartment Lamp C254



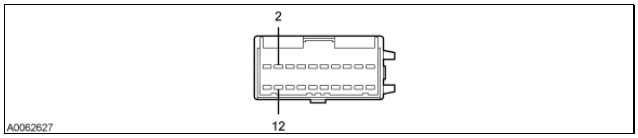
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-LB8 (OG) glove compartment lamp power circuit	Greater than 10 volts between glove compartment lamp and ground. Greater than 10,000 ohms between glove compartment lamp and ground with lamp connector disconnected.
2	31-LB8 (BK/OG) glove compartment lamp ground circuit	Less than 5 ohms between glove compartment lamp and ground.

Footwell Lamps C266 and C209



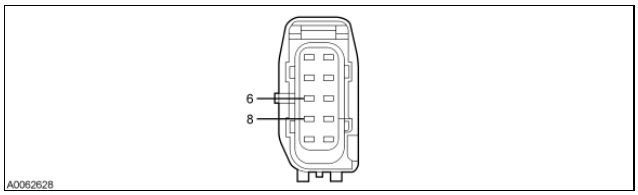
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C266)	31S-LC23 (BK/WH) RH footwell lamp ground circuit	Greater than 10,000 ohms between footwell lamp and ground with FEM disconnected. Less than 5 ohms between footwell lamp and FEM.
1 (C209)	31S-LC11 (BK/WH) LH footwell lamp ground circuit	Greater than 10,000 ohms between footwell lamp and ground with FEM disconnected. Less than 5 ohms between footwell lamp and FEM.
2 (C266)	29S-LC23 (OG/WH) RH footwell lamp power supply circuit	Greater than 10 volts between RH footwell lamp and ground. Greater than 10,000 ohms between RH footwell lamp and ground with footwell lamp disconnected.
2 (C209)	29S-LC11 (OG/WH) LH footwell lamp power supply circuit	Greater than 10 volts between LH footwell lamp and ground. Greater than 10,000 ohms between LH footwell lamp and ground with footwell lamp disconnected.

Puddle Lamps C520, C601



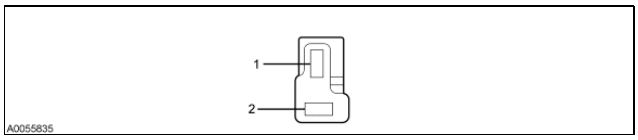
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2 (C520)	29S-LC34 (OG/YE) LH puddle lamp power supply circuit	Greater than 10 volts between LH puddle lamp and ground. Greater than 10,000 ohms between LH puddle lamp and ground.
2 (C601)	29S-LC36 (OG/YE) RH puddle lamp power circuit	Greater than 10 volts between RH puddle lamp and ground. Greater than 10,000 ohms between RH puddle lamp and ground.
12 (C520)	9-LC34 (BN) LH puddle lamp ground circuit	Greater than 10,000 ohms between puddle lamp and ground with FEM disconnected. Less than 5 ohms between puddle lamp and FEM.
12 (C601)	9-LC36 (BN) RH puddle lamp ground circuit	Greater than 10,000 ohms between puddle lamp and ground with FEM disconnected. Less than 5 ohms between puddle lamp and FEM.

Door Ajar Switches C525, C609, C704, C804



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6 (C525)	31-AA58 (BK) Driver door ajar switch ground circuit	Less than 5 ohms between door ajar switch and ground.
6 (C609)	31-AA58 (BK) Passenger door ajar switch ground circuit	Less than 5 ohms between door ajar switch and ground.
6 (C704)	31-AA58 (BK) LH rear door ajar switch ground circuit	Less than 5 ohms between door ajar switch and ground.
6 (C804)	31-AA58 (BK) RH rear door ajar switch ground circuit	Less than 5 ohms between door ajar switch and ground.
8 (C525)	31S-GL46 (BK/YE) Driver door ajar switch power circuit	Greater than 10,000 ohms between door ajar switch and ground with door ajar switch and FEM disconnected. Less than 5 ohms between door ajar switch and FEM.
8 (C609)	31S-GL47 (BK/BU) Passenger door ajar switch power circuit	Greater than 10,000 ohms between door ajar switch and ground with door ajar switch and FEM disconnected. Less than 5 ohms between door ajar switch and FEM.
8 (C704)	31S-GL12 (BK/OG) LH rear door ajar switch power circuit	Greater than 10,000 ohms between door ajar switch and ground with door ajar switch and REM disconnected. Less than 5 ohms between door ajar switch and REM.
8 (C804)	31S-GL19 (BK/GN) RH rear door ajar switch power circuit	Greater than 10,000 ohms between door ajar switch and ground with door ajar switch and REM disconnected. Less than 5 ohms between door ajar switch and REM.

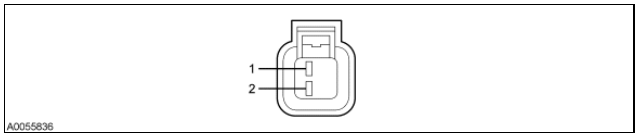
Luggage Compartment Lamp C428



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-LB25 (OG/BU) Luggage compartment lamp power circuit	Greater than 10 volts between luggage compartment lamp and ground. Greater than 10,000 ohms between luggage compartment lamp and ground.
2	31S-LB25 (BK/BU) Luggage compartment lamp ground circuit	Greater than 10,000 ohms between luggage compartment lamp and ground with REM disconnected. Less than 5

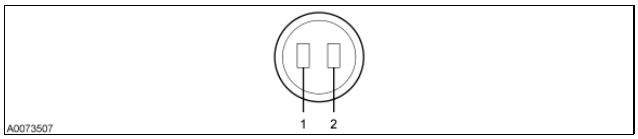
		ohms between luggage compartment lamp and REM.

Luggage Compartment Lid Ajar Switch C429



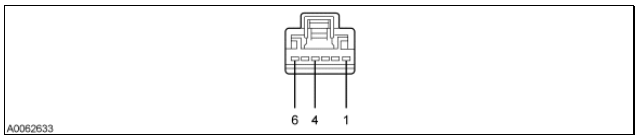
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-GL20 (WH/BK) Luggage compartment lid ajar switch power circuit	Greater than 10,000 ohms between luggage compartment lid ajar switch and ground with luggage compartment lid ajar switch disconnected. Less than 5 ohms between luggage compartment lid ajar switch and REM.
2	31-GL20 (BK/RD) Luggage compartment lid ajar switch ground circuit	Less than 5 ohms between luggage compartment lid ajar switch and ground.

Map Lamps C903, C908



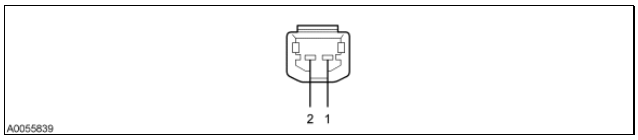
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C903)	31S-LB19 (BK/BU) RH map lamp ground circuit	Greater than 10,000 ohms between map lamp and ground with RH map lamp switch disconnected. Less than 5 ohms between RH map lamp and RH map lamp switch.
1 (C908)	31S-LB12 (BK/YE) LH map lamp ground circuit	Greater than 10,000 ohms between map lamp and ground with LH map lamp switch disconnected. Less than 5 ohms between LH map lamp and LH map lamp switch.
2 (C903)	29S-LB19 (OG/BU) RH map lamp power circuit	Greater than 10 volts between RH map lamp and ground. Greater than 10,000 ohms between RH map lamp and ground.
2 (C908)	29S-LB12 (OG/YE) LH map lamp power circuit	Greater than 10 volts between LH map lamp and ground. Greater than 10,000 ohms between LH map lamp and ground.

Map Lamps Switches C905, C910



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C905)	31S-LB19 (BK/BU) RH map lamp switch power circuit	Greater than 10,000 ohms between RH map lamp switch and ground with RH map lamp switch and RH map lamp disconnected. Less than 5 ohms between RH map lamp and RH map lamp switch.
1 (C910)	31S-LB12 (BK/YE) LH map lamp switch power circuit	Greater than 10,000 ohms between LH map lamp switch and ground with LH map lamp switch and LH map lamp disconnected. Less than 5 ohms between LH map lamp and LH map lamp switch.
4 (C905)	31-LB20 (BK/OG) RH map lamp, demand lamp function, circuit ground	Less than 5 ohms between map lamp switch and ground.
4 (C910)	31-LB13 (BK/BU) LH map lamp, demand lamp function, circuit ground	Less than 5 ohms between map lamp switch and ground.
6 (C905)	9-LB20 (BN/BU) RH map lamp, interior lamp function, circuit ground	Greater than 10,000 ohms between RH map lamp switch and ground with FEM disconnected. Less than 5 ohms between RH map lamp switch and FEM.
6 (C910)	9-LB13 (BN/RD) LH map lamp, interior lamp function, circuit ground	Greater than 10,000 ohms between LH map lamp switch and ground with FEM disconnected. Less than 5 ohms between LH map lamp switch and FEM.

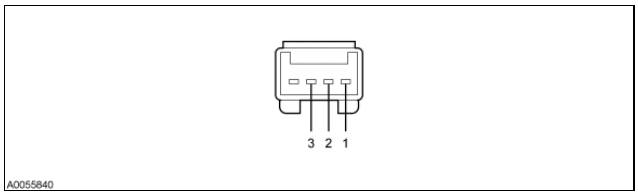
Vanity Mirror Lamps C906, C907



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C906)	31-LB23 (BK/WH) RH vanity mirror lamp ground circuit	Less than 5 ohms between RH vanity mirror lamp and ground.
1 (C907)	31-LB16 (BK/RD) LH vanity mirror lamp ground circuit.	Less than 5 ohms between LH vanity mirror lamp and ground.
2 (C906)	29S-LB23 (OG/WH) RH vanity mirror lamp power circuit	Greater than 10 volts between RH vanity mirror lamp and ground. Greater than 10,000 ohms between RH vanity mirror lamp and ground.
2 (C907)	29S-LB16 (OG/GN) LH vanity mirror lamp power circuit	Greater than 10 volts between LH vanity mirror lamp and ground. Greater than

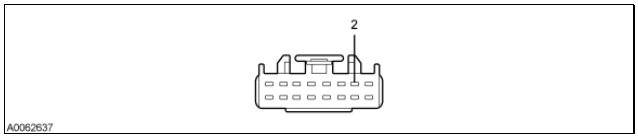
		10,000 ohms between LH vanity mirror lamp and ground.

Rear Grab Handle Lamps C9009, C9010



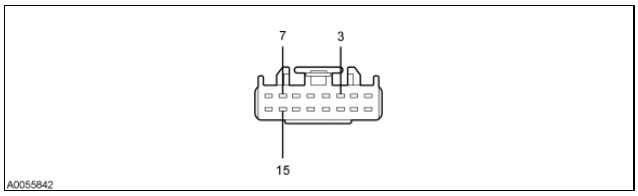
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C9009)	29S-LB14 (OG) LH rear grab handle lamp power supply circuit	Greater than 10 volts between LH rear grab handle lamp and ground. Greater than 10,000 ohms between LH rear grab handle lamp and ground.
1 (C9010)	29S-LB21 (OG/BK) RH rear grab handle lamp power supply circuit	Greater than 10 volts between RH rear grab handle lamp and ground. Greater than 10,000 ohms between RH rear grab handle lamp and ground.
2 (C9009)	31-LB14 (BK) LH rear grab handle lamp, demand lamp function, ground circuit	Less than 5 ohms to ground.
2 (C9010)	31-LB21 (BK) RH rear grab handle lamp, demand lamp function, ground circuit	Less than 5 ohms to ground.
3 (C9009)	9-LB14 (BN/BU) LH rear grab handle lamp, interior lamp function, ground circuit	Greater than 10,000 ohms between LH rear grab handle lamp and ground with FEM disconnected. Less than 5 ohms between LH rear grab handle lamp and FEM.
3 (C9010)	9-LB21 (BN/GN) RH rear grab handle lamp, interior lamp function, ground circuit	Greater than 10,000 ohms between RH rear grab handle lamp and ground with FEM disconnected. Less than 5 ohms between RH rear grab handle lamp and FEM.

Auxiliary Junction Box C283a



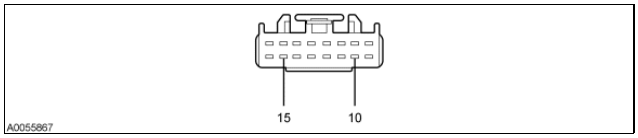
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	9-LB1 (BN) interior lamp ground circuit	Greater than 10 volts between auxiliary junction box and ground. Greater than 10,000 ohms between auxiliary junction box and ground.

Auxiliary Junction Box C283b



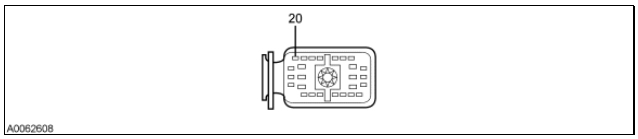
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31S-LC3 (BK/BU) interior lamp ground circuit between auxiliary junction box and FEM	Greater than 10,000 ohms between auxiliary junction box and ground with FEM disconnected. Less than 5 ohms between auxiliary junction box and FEM.
7	29S-LC34 (OG/YE) LH puddle lamp power supply circuit	Greater than 10,000 ohms between auxiliary junction box and ground with LH front puddle lamp disconnected. Less than 5 ohms between auxiliary junction box and LH front puddle lamp.
15	29S-LC5 (OG/GN) LH footwell lamp and LH front puddle lamp power supply circuit	Greater than 10 volts between auxiliary junction box and ground. Greater than 10,000 ohms between auxiliary junction box and ground. Less than 5 ohms between auxiliary junction box and CJB.

Interior Junction Box C283d



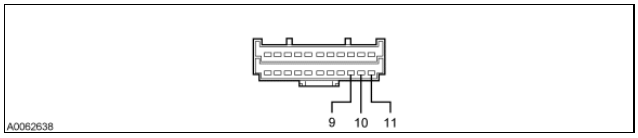
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	31S-LC4 (BK/BU) LH and RH footwell lamps ground circuit between LH instrument panel junction block and interior junction box	Greater than 10 volts between interior junction box and ground. Greater than 10,000 ohms between interior junction box and ground with LH instrument panel junction block disconnected. Less than 5 ohms between auxiliary junction box and LH instrument panel junction block.
15	29S-LC11 (OG/WH) LH footwell lamp power supply circuit	Greater than 10,000 ohms between auxiliary junction box and ground with LH footwell lamp disconnected. Less than 5 ohms between auxiliary junction box and LH footwell lamp.

CJB C270d



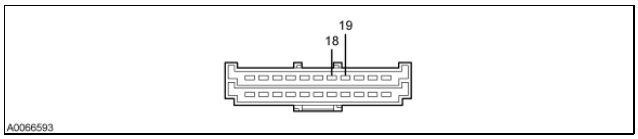
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
20	29S-LC36 (OG/YE) RH front puddle lamp power supply circuit	Greater than 10,000 ohms to ground with RH front puddle lamp disconnected. Less than 5 ohms between CJB and RH front puddle lamp.

LH Instrument Panel Junction Block C224



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
9	31S-LC4 (BK/BU) LH and RH footwell lamp ground circuit between LH instrument panel junction block and auxiliary junction box	Greater than 10,000 ohms between LH instrument panel junction box and ground with auxiliary junction box disconnected. Less than 5 ohms between LH instrument panel junction box and auxiliary junction box.
10	31S-LC23 (BK/WH) RH footwell lamp ground circuit	Greater than 10,000 ohms between LH instrument panel junction block and ground with RH footwell lamp disconnected. Less than 5 ohms between LH instrument panel junction block and RH footwell lamp.
11	31S-LC11 (BK/WH) LH footwell lamp ground circuit	Greater than 10,000 ohms between LH instrument panel junction block and ground with LH footwell lamp disconnected. Less than 5 ohms between LH instrument panel junction block and LH footwell lamp.

RH Instrument Panel Junction Block C261



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
18	29S-LC23 (OG/WH) RH footwell lamp power supply circuit	Greater than 10,000 ohms between RH instrument panel junction block and ground with RH footwell lamp disconnected. Less than 5 ohms between RH instrument panel junction block and RH footwell lamp.
19	29S-LC1 (OG/BU) glove compartment lamp and RH footwell lamp power supply circuit between the CBJ and RH instrument panel junction block	Greater than 10 volts between RH instrument panel junction block and ground. Greater than 10,000 ohms between RH instrument panel junction block and ground. Less than 5 ohms between RH instrument panel junction block and CJB.

Pinpoint Tests

Pinpoint Test A: The Interior Lamps Are Inoperative

Normal Operation

The interior lighting feature provides interior lighting whenever a door is ajar. The interior lamps are controlled through the FEM. The FEM provides the ground circuit for the front dome/map lamps, rear grab handle lamps, RH and LH footwell lamps and the RH and LH puddle lamps through common circuit 31S-LC3 (BK/BU). Power for the interior lamps is supplied through common circuit 29S-LB2 (OG/BU) from switched system power (SSP) relay 3.

Possible Causes

- Battery junction box (BJB)
- Circuit 29S-LC23 (OG/WH) open
- Circuit 31S-LC3 (BK/BU) short to power
- Circuit 31-DK20 (BK/RD) open
- FEM

PINPOINT TEST A: THE INTERIOR LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK CIRCUIT 30S-DB16 (RD/GN) FOR OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Remove BJB fuse 5 (10A). • Measure the voltage between BJB fuse 5 (10A) pin 1, circuit 30S-DB16 (RD/GN), and ground.	**Yes** INSTALL fuse 5 (10A). GO to A2 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 • **Is the voltage greater than 10 volts?**	
A2 CHECK CIRCUIT 29S-LC23 (OG/WH) FOR AN OPEN	
• Disconnect: RH Footwell Lamp C266. • Measure the voltage between the RH footwell lamp, C266-2, circuit 29S-LC23 (OG/WH), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** RECONNECT C266. GO to A3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A3 CHECK CIRCUIT 31S-LC3 (BK/BU) FOR SHORT TO POWER	
• Key in OFF position. • Remove BJB fuse 5 (10A). • Disconnect: FEM C201F. • Measure the voltage between FEM C201f-12, circuit 31S-LC3 (BK/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to A4 .
A4 CHECK FEM FOR OPENS	
• Install BJB fuse 5 (10A). • Key in ON position. • Connect a 30A fused jumper between FEM C201f-12, circuit 31S-LC3 (BK/BU), harness side and ground.  • **Did the interior lamps illuminate?**	**Yes** GO to A5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

A5 CHECK CIRCUIT 31-DK20 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201a • Measure the resistance between FEM C201a-11, circuit 31-DK20 (BK/RD) harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to A6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A6 CHECK FOR CORRECT FEM OPERATION	
• Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The Interior Lamps Do Not Turn On With One Door Open

Normal Operation

The interior lighting feature provides interior lighting whenever a door is ajar. The interior lamps are controlled through the FEM. The FEM provides the ground circuit for the front dome/map lamps, rear grab handle lamps, RH and LH footwell lamps and the RH and LH puddle lamps through common circuit 31S-LC3 (BK/BU). Power for the interior lamps is supplied through common circuit 29S-LB2 (OG/BU) from switched system power (SSP) relay 3. The LH and RH dome/map lamps and LH and RH grab handle lamps share a common power supply splice from circuit 29S-LB2 (OG/BU) and a common ground circuit splice to circuit 9-LB1 (BN/RD). The LH and RH puddle lamps and LH and RH footwell lamps are supplied power from circuit 29S-LB2 (OG/BU) through the central junction box (CJB). All interior lamp ground circuits connect at the auxiliary junction box and combine into one common ground circuit 29S-LC3 (BK/OG).

Possible Causes

- Individual interior lamp
- LH map lamp switch
- RH map lamp switch
- LH rear grab handle lamp assembly
- RH rear grab handle lamp assembly
- LH instrument panel junction block
- RH instrument panel junction block
- Auxiliary junction box
- Central junction box (CJB)
- FEM
- Circuit 29S-LC34 (OG/YE) open
- Circuit 9-LC34 (BN) open
- Circuit 29S-LC36 (OG/YE) open

- Circuit 9-LC36 (BN) open
- Circuit 9-LB13 (BN/RD) open
- Circuit 29S-LB12 (OG/YE) open
- Circuit 31S-LB12 (BK/YE) open
- Circuit 9-LB20 (BN/BU) open
- Circuit 29S-LB19 (OG/BU) open
- Circuit 31S-LB19 (BK/BU) open
- Circuit 29S-LB14 (OG) open
- Circuit 9-LB14 (BN/BU) open
- Circuit 29S-LB21 (OG/BK) open
- Circuit 9-LB21 (BN/GN) open
- Circuit 29S-LC11 (OG/WH) open
- Circuit 31S-LC11 (BK/WH) open
- Circuit 29S-LC23 (OG/WH) open
- Circuit 31S-LC23 (BK/WH) open
- Circuit 31S-LC4 (BK/GN) open
- Circuit 29S-LC1 (OG/YE) open
- Circuit 29S-LC5 (OG/GN) open
- Circuit 9-LB1 (BN) open
- Circuit 31-DK20 (BK/RD) open

PINPOINT TEST B: THE INTERIOR LAMPS DO NOT TURN ON WITH ONE DOOR OPEN

Test Step	Result / Action to Take
B1 VERIFY INTERIOR LAMP SYMPTOM	
• Verify the interior lamp symptom. • **Is more than one lamp inoperative?**	**Yes** GO to B28 . **No** If a puddle lamp is inoperative, GO to B2 . If a map lamp is inoperative, GO to B9 . If a rear grab handle lamp is inoperative, GO to B16 . If a footwell lamp is inoperative, GO to B21 .
B2 VERIFY PUDDLE LAMP SYMPTOM	
• Verify the area of the puddle lamp symptom. • **Is the driver side puddle lamp inoperative?**	**Yes** GO to B3 . **No** GO to B6 .
B3 CHECK CIRCUIT 29S-LC34 (OG/YE) FOR VOLTAGE	

NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after the ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in ON position. • Disconnect: Driver Side Puddle Lamp C520. • Measure the voltage between the driver side puddle lamp C520-2, circuit 29S-LC34 (OG/YE), harness side and ground.  A0056612 • **Is the voltage greater than 10 volts?**	**Yes** GO to B5 . **No** GO to B4 .
B4 CHECK CIRCUIT 29S-L34 (OG/YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: Auxiliary Junction Box C283b. • Measure the resistance between auxiliary junction box C283b-7, circuit 29S-LC34 (OG/YE), harness side and driver side puddle lamp C520-2, circuit 29S-LC34 (OG/YE) harness side.  A0056613 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK CIRCUIT 9-LC34 (BN) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201b. • Measure the resistance between FEM C201b-18, circuit 9-LC34 (BN), harness side and driver side puddle lamp C520-12, circuit 9-LC34 (BN) harness side.  A0056614 • **Is the resistance less than 5 ohms?**	**Yes** GO to B38 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B6 CHECK CIRCUIT 29S-LC36 (OG/YE) FOR VOLTAGE	

NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in ON position. • Disconnect: Passenger Side Puddle Lamp C601. • Measure the voltage between the passenger side puddle lamp C601-2, circuit 29S-LC36 (OG/YE), harness side and ground.  A0056612 • **Is the voltage greater than 10 volts?**	**Yes** GO to B8 . **No** GO to B7 .
B7 CHECK CIRCUIT 29S-LC36 (OG/YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: CJB C270d. • Measure the resistance between CJB C270d-20, circuit 29S-LC36 (OG/YE), harness side and passenger side puddle lamp C601-2, circuit 29S-LC36 (OG/YE) harness side.  A0056615 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new CJB. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B8 CHECK CIRCUIT 9-LC36 (BN) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201b. • Measure the resistance between FEM C201b-12, circuit 9-LC36 (BN), harness side and passenger side puddle lamp C601-12, circuit 9-LC36 (BN), harness side.  A0056616 • **Is the resistance less than 5 ohms?**	**Yes** GO to B38 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B9 VERIFY INTERIOR MAP LAMP SYMPTOM	
• Verify the area of the interior map lamp symptom.	**Yes** GO to B10 .

• **Is the LH map lamp inoperative?**	**No** GO to B13 .
B10 CHECK LH MAP LAMP SWITCH FOR VOLTAGE	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in ON position. • Disconnect: LH Front Map Reading Lamp Switch C910. • Measure the voltage between the LH front map reading lamp switch C910-1, circuit 31S-LB12 (BK/YE), harness side and ground.  A0066592 • **Is the voltage greater than 10 volts?**	**Yes** GO to B11 . **No** GO to B12 .
B11 CHECK CIRCUIT 9-LB13 (BN/RD) FOR AN OPEN	
• Measure the resistance between LH map lamp switch C910-6, circuit 9-LB13 (BN/RD), harness side and ground.  A0004317 • Open the driver door. • **When the driver door is opened, does resistance drop to less than 5 ohms?**	**Yes** INSTALL a new front map lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B12 CHECK CIRCUITS 29S-LB12 (OG/YE) AND 31S-LB12 (BK/YE) FOR AN OPEN	
• Disconnect: LH Front Map Lamp C908. • Measure the voltage between LH front map lamp bulb C908-2, circuit 29S-LB12 (OG/YE), harness side and ground.  A0062610	**Yes** REPAIR circuit 31S-LB12 (BK/YE). CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 29S-LB12 (OG/YE). CLEAR the DTCs. REPEAT the self-test.

• **Is the voltage greater than 10 volts?**	
B13 CHECK THE RH MAP LAMP SWITCH FOR VOLTAGE	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: RH Front Map Lamp Switch C905. • Key in ON position. • Measure the voltage between the RH front map lamp switch C905-1, circuit 31S-LB19 (BK/BU), harness side and ground.  A0066592 • **Is the voltage greater than 10 volts?**	**Yes** GO to B14 . **No** GO to B15 .
B14 CHECK CIRCUIT 9-LB20 (BN/BU) FOR AN OPEN	
• Measure the resistance between RH front map lamp switch C905-6, circuit 9-LB20 (BN/BU), harness side and ground.  A0004317 • Open the driver door. • **When the driver door is opened, does resistance drop to less than 5 ohms?**	**Yes** INSTALL a new front map lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B15 CHECK CIRCUITS 29S-LB19 (OG/BU) AND 31S-LB19 (BK/BU) FOR AN OPEN	
• Disconnect: RH Front Map Lamp C903. • Measure the voltage between RH front map lamp C903-2, circuit 29S-LB19 (OG/BU), harness side and ground.  A0062610 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 31S-LB19 (BK/BU). CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 29S-LB19 (OG/BU). CLEAR the DTCs. REPEAT the self-test.

B16 VERIFY GRAB HANDLE INTERIOR LAMP SYMPTOM	
• Verify the area of the rear grab handle interior lamp symptom. • **Is the LH rear grab handle interior lamp inoperative?**	**Yes** GO to B17 . **No** GO to B19 .
B17 CHECK CIRCUIT 29S-LB14 (OG)	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: LH Rear Grab Handle Lamp C9009. • Key in ON position. • Measure the voltage between the LH rear grab handle lamp C9009-1, circuit 29S-LB14 (OG) harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B18 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B18 CHECK CIRCUIT 9-LB14 (BN/BU) FOR AN OPEN	
• Measure the resistance between the LH rear grab handle lamp C9009-3, circuit 9-LB14 (BN/BU) harness side and ground.  • Open the driver door. • **When the driver door is opened, does the resistance drop to less than 5 ohms?**	**Yes** INSTALL a new LH rear grab handle lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 9-LB14 (BN/BU). CLEAR the DTCs. REPEAT the self-test.
B19 CHECK CIRCUIT 29S-LB21 (OG/BK)	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: RH Rear Grab Handle Lamp C9010. • Key in ON position.	**Yes** GO to B20 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

• Measure the voltage between the RH rear grab handle lamp C9010-1, circuit 29S-LB21 (OG/BK) harness side and ground.  • **Is the voltage greater than 10 volts?**	
B20 CHECK CIRCUIT 9-LB21 (BN/GN) FOR AN OPEN	
• Measure the resistance between the RH rear grab handle lamp C9010-3, circuit 9-LB21 (BN/GN) harness side and ground.  • Open the driver door. • **When the driver door is opened, does the resistance drop to less than 5 ohms?**	**Yes** INSTALL a new RH rear grab handle lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 9-LB21 (BN/GN). CLEAR the DTCs. REPEAT the self-test.
B21 VERIFY INTERIOR FRONT FOOTWELL LAMP SYMPTOM	
• Verify the area of the front footwell interior lamp symptom. • **Are both front footwell lamps inoperative?**	**Yes** GO to B28 . **No** If the LH footwell lamp is inoperative, GO to B22 . If the RH footwell lamp is inoperative, GO to B25 .
B22 CHECK CIRCUIT 29S-LC11 (OG/WH) FOR VOLTAGE	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in ON position. • Disconnect: LH Front Footwell Lamp C209. • Measure the voltage between the LH front footwell lamp C209-2, circuit 29S-LC11 (OG/WH), harness side and ground.	**Yes** GO to B24 . **No** GO to B23 .

 A0004309 • **Is the voltage greater than 10 volts?**	
B23 CHECK CIRCUIT 29S-LC11 (OG/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: Auxiliary Junction Box C283d. • Measure the resistance between the LH front footwell lamp C209-2, circuit 29S-LC11 (OG/WH), harness side and auxiliary junction box C283d-15, circuit 29S-LC11 (OG/WH), harness side.  A0004319 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B24 CHECK CIRCUIT 31S-LC11 (BK/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Instrument Panel Junction Block C224. • Measure the resistance between LH instrument panel junction block, C224-11, circuit 31S-LC11 (BK/WH), harness side and LH front footwell lamp C209-1, circuit 31S-LC11 (BK/WH), harness side.  A0056619 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR LH instrument panel junction block, C224. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B25 CHECK CIRCUIT 29S-LC23 (OG/WH) FOR VOLTAGE	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in ON position. • Disconnect: RH Front Footwell Lamp Bulb C266. • Measure the voltage between the RH front footwell lamp C266-2, circuit 29S-LC23 (OG/WH), harness side and ground.	**Yes** GO to B27 . **No** GO to B26 .

 A0004309 • **Is the voltage greater than 10 volts?**	
B26 CHECK CIRCUIT 29S-LC23 (OG/WH) FOR AN OPEN	
• Key on OFF position. • Disconnect: RH Instrument Panel Junction Block C261. • Measure the resistance between the RH front footwell lamp C266-2, circuit 29S-LC23 (OG/WH), harness side and RH instrument panel junction block, C261-18, circuit 29S-LC23 (OG/WH) harness side.  A0056620 • **Is the resistance less than 5 ohms?**	**Yes** Verify if the glove box lamp is operating correctly. If it is OK, REPAIR RH instrument panel junction block, C261. CLEAR the DTCs. REPEAT the self-test. If the glove box lamp is not operating correctly, GO to B28 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B27 CHECK CIRCUIT 31S-LC23 (BK/WH) FOR AN OPEN	
• Key on OFF position. • Disconnect: LH Instrument Panel Junction Block C224. • Measure the resistance between the LH instrument panel junction block, C224-10, circuit 31S-LC23 (BK/WH), harness side and RH front footwell lamp C266-1, circuit 31S-LC23 (BK/WH), harness side.  A0056621 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR LH instrument panel junction block, C224. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B28 CHECK LH AND RH PUDDLE LAMPS	
• Verify the symptom. • **Are both puddle lamps inoperative?**	**Yes** INSTALL a new CJB. CLEAR the DTCs. REPEAT the self-test. **No** GO to B29 .
B29 CHECK LH AND RH FRONT FOOTWELL LAMPS	
• Verify the symptom. • **Are both front footwell interior lamps inoperative?**	**Yes** GO to B30 . **No** GO to B32 .

B30 CHECK VOLTAGE TO AUXILIARY JUNCTION BOX	
• Disconnect: Auxiliary Junction Box 283d. • Measure the voltage between the auxiliary junction box C283d-10, circuit 31S-LC4 (BK/BU), harness side and ground.  A0004323 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** GO to B31 .
B31 CHECK CIRCUIT 31S-LC4 (BK/GN) FOR AN OPEN	
• Disconnect: LH Instrument Panel Junction Block C224. • Measure the resistance between the LH instrument panel junction block, C224-9, circuit 31S-LC4 (BK/BU), harness side and auxiliary junction box C283d-10, circuit 31S-LC4 (BK/BU), harness side.  A0056622 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR LH instrument panel junction block. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B32 CHECK RH FRONT FOOTWELL LAMP AND GLOVE BOX LAMP	
• Verify the symptom. • **Are the RH front footwell and glove box lamps the only lamps that are inoperative?**	**Yes** GO to B33 . **No** GO to B34 .
B33 CHECK CIRCUIT 29S-LC1 (OG/YE)	
• Disconnect: RH Instrument Panel Junction Block C261. • Key in ON position. • Measure the voltage between RH instrument panel junction block, C261-19, circuit 29S-LC1 (OG/BU), harness side and ground.  A0056623 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR RH instrument panel junction block. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 29S-LC1 (OG/YE). CLEAR the DTCs. REPEAT the self-test.

B34 CHECK LH FOOTWELL LAMP AND LH PUDDLE LAMP	
• Verify the symptom. • **Are the LH footwell and LH puddle lamps the only lamps that are inoperative?**	**Yes** GO to B35 . **No** GO to B36 .
B35 CHECK CIRCUIT 29S-LC5 (OG/GN)	
• Disconnect: Auxiliary Junction Box C283b. • Key in ON position. • Measure the voltage between the auxiliary junction box C283b-15, circuit 29S-LC5 (OG/GN), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B36 CHECK BOTH MAP AND BOTH GRAB HANDLE LAMPS OPERATION AT THE AUXILIARY JUNCTION BOX	
• Disconnect: Auxiliary Junction Box C283a. • Connect a 10A fused jumper between auxiliary junction box C283a-2, circuit 9-LB1 (BN), harness side and ground.  • **Do both map and both rear grab handle lamps illuminate?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** GO to B37 .
B37 CHECK CIRCUIT 9-LB1 (BN) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Rear Grab Handle Lamp C9009. • Measure the resistance between the LH rear grab handle lamp, C9009-3, circuit 9-LB14 (BN/BU), harness side and auxiliary junction box C283a-2, circuit 9-LB1 (BN), harness side.	**Yes** REPAIR circuit 29S-LB2 (OG/BU). CLEAR the DTCs. REPEAT the self-test. **No** REPAIR circuit 9-LB1 (BN). CLEAR the DTCs. REPEAT the self-test.

 A0056624 • **Is the resistance less than 5 ohms?**	
B38 CHECK CIRCUIT 31-DK20 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201a • Measure the resistance between FEM C201a-11, circuit 31-DK20 (BK/RD) harness side and ground.  A0056611 • **Is the resistance less than 5 ohms?**	**Yes** GO to B39 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B39 CHECK FOR CORRECT FEM OPERATION	
• Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: The Interior Lamps Stay On Continuously

Normal Operation

The interior lighting feature provides interior lighting whenever a door is ajar. The interior lamps are controlled through the FEM. The FEM provides the ground circuit for the front dome/map lamps, rear grab handle lamps, RH and LH footwell lamps and the RH and LH puddle lamps through common circuit 31S-LC3 (BK/BU). Power for the interior lamps is supplied through common circuit 29S-LB2 (OG/BU) from switched system power (SSP) relay 3. The LH and RH dome/map lamps and LH and RH grab handle lamps share a common power supply splice from circuit 29S-LB2 (OG/BU) and a common ground circuit splice to circuit 9-LB1 (BN). The LH and RH puddle lamps and LH and RH footwell lamps are supplied power from circuit 29S-LB2 (OG/BU) through the central junction box (CJB). All interior lamp ground circuits connect at the auxiliary junction box and combine into one common ground circuit 29S-LC3 (OG).

Possible Causes

- Driver door ajar switch
- Passenger door ajar switch
- LH rear passenger door ajar switch
- RH rear passenger door ajar switch
- Map lamp switches
- Rear grab handle lamp switches

- FEM
- REM
- Circuit 31-AA58 (BK) open
- Circuit 31S-GL46 (BK/YE) open
- Circuit 31S-GL47 (BK/BU) open
- Circuit 31S-GL12 (BK/OG) short to ground
- Circuit 31S-GL19 (BK/GN) short to ground
- Circuit 31S-LC3 (BK/BU) short to ground
- Circuit 9-LC34 (BN) short to ground
- Circuit 9-LB1 (BN) short to ground

PINPOINT TEST C: THE INTERIOR LAMPS STAY ON CONTINUOUSLY

Test Step	Result / Action to Take
C1 USE THE RECORDED RESULTS FROM FEM SELF-TESTS	
• Use the recorded FEM continuous and self-test DTCs. • **Are any DTCs recorded?**	**Yes** If DTC B1319, GO to C3 . If DTC B1327, GO to C6 . For all other DTCs, REFER to DTC index in this section. **No** GO to C2 .
C2 USE THE RECORDED RESULTS FROM REM SELF-TESTS	
• Use the recorded REM continuous and self-test DTCs. • **Are any DTCs recorded?**	**Yes** If DTC B1335, GO to C20 . If DTC B1571, GO to C23 . For all other DTCs, REFER to DTC index in this section. **No** GO to C9 .
C3 CHECK THE DRIVER DOOR AJAR SWITCH	
• Key in OFF position. • Disconnect: Driver Door Lock Actuator C525. • Connect a fused jumper wire between driver door lock actuator C525-6, circuit 31-AA58 (BK), harness side and C525-8, circuit 31S-GL46 (BK/YE), harness side.	**Yes** INSTALL a new driver door lock actuator/ajar switch. REFER to Section 419-01B . CLEAR the DTCs. REPEAT the self-test. **No** GO to C4 .

 A0005553 • **Did the interior lamps tun OFF after 20-30 seconds?**	
C4 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	
• Measure the resistance between driver door lock actuator C525-6, circuit 31-AA58 (BK), harness side and ground.  A0005554 • **Is the resistance less than 5 ohms?**	**Yes** GO to C5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C5 CHECK CIRCUIT 31S-GL46 (BK/YE) FOR AN OPEN	
• Disconnect: FEM C201f. • Measure the resistance between driver door lock actuator, C525-8, circuit 31S-GL46 (BK/YE), harness side and FEM, C201f-8, circuit 31S-GL46 (BK/YE), harness side.  A0004331 • **Is the resistance less than 5 ohms?**	**Yes** GO to C26 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C6 CHECK THE FRONT PASSENGER DOOR AJAR SWITCH	
• Key in OFF position. • Disconnect: Front Passenger Door Lock Actuator C609. • Connect a fused jumper wire between front passenger door lock actuator, C609-6, circuit 31-AA58 (BK), harness side and C609-8, circuit 31S-GL47 (BK/BU), harness side.	**Yes** INSTALL a new passenger door lock actuator/ajar switch. REFER to Section 419-01B . CLEAR the DTCs. REPEAT the self-test. **No** GO to C7 .

 A0005553 • **Did the interior lamps tun OFF after 20-30 seconds?**	
C7 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	
• Measure the resistance between front passenger door lock actuator, C609-6, circuit 31-AA58 (BK), harness side and ground.  A0005554 • **Is the resistance less than 5 ohms?**	**Yes** GO to C8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C8 CHECK CIRCUIT 31S-GL47 (BK/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: FEM C201e. • Measure the resistance between front passenger door lock actuator, C609-8, circuit 31S-GL47 (BK/BU), harness side and FEM, C201e-15, circuit 31S-GL47 (BK/BU), harness side.  A0004332 • **Is the resistance less than 5 ohms?**	**Yes** GO to C26 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C9 CHECK LH FRONT MAP READING LAMP OPERATION	
• Key in ON position. • Activate the LH front map reading lamp demand switch. • **Do all other interior lamps turn OFF?**	**Yes** GO to C12 . **No** GO to C10 .
C10 CHECK RH FRONT MAP READING LAMP OPERATION	
• Activate the RH front map lamp switch. • **Do all other interior lamps turn OFF?**	**Yes** GO to C13 . **No** GO to C11 .

C11 CHECK LH GRAB HANDLE LAMP SWITCH OPERATION	
• Activate the LH rear grab handle lamp switch. • **Do all other interior lamps turn OFF?**	**Yes** INSTALL a new LH rear grab handle lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** GO to C14 .
C12 CHECK CIRCUIT 31S-LB12 (BK/YE) FOR SHORT TO GROUND	
• Disconnect: LH Front Map Reading Lamp Switch C910. • **Does the LH front map lamp stay ON?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new front map lamp assembly. CLEAR the DTCs. REPEAT the self-test.
C13 CHECK CIRCUIT 31S-LB19 (BK/BU) FOR SHORT TO GROUND	
• Disconnect: RH Front Map Reading Lamp Switch C905. • **Does the RH front map lamp stay ON?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new front map lamp assembly. CLEAR the DTCs. REPEAT the self-test.
C14 CHECK RH GRAB HANDLE LAMP SWITCH OPERATION	
• Activate the RH rear grab handle lamp switch. • **Do all other interior lamps turn off?**	**Yes** INSTALL a new RH rear grab handle lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** GO to C15 .
C15 ISOLATE CIRCUIT 31S-LC3 (BK/BU) AND FEM FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: Auxiliary Junction Box C283b. • Measure the resistance between auxiliary junction box, C283b-3, circuit 31S-LC3 (BK/BU), harness side and ground.  • **Is resistance greater than 10,000 ohms?**	**Yes** GO to C17 . **No** GO to C16 .

C16 CHECK CIRCUIT 31S-LC3 (BK/BU) FOR SHORT TO GROUND	
• Disconnect: FEM C201f. • Measure the resistance between auxiliary junction box C283b-3, circuit 31S-LC3 (BK/BU), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C26 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C17 CHECK CIRCUIT 9-LC34 (BN) FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: Auxiliary Junction Box C283b. • **Are all interior lamps still on?**	**Yes** GO to C18 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C18 ISOLATE THE FOOTWELL LAMP CIRCUITS FOR SHORT TO GROUND	
• Disconnect: Auxiliary Junction Box C283d. • **Are all the interior lamps still on?**	**Yes** GO to C19 . **No** REPAIR circuit 31S-LC4 (OG/YE). CLEAR the DTCs. REPEAT the self-test.
C19 CHECK CIRCUITS 9-LB1 (BN) AND 9-LC36 (BN) FOR SHORT TO GROUND	
• Disconnect: Auxiliary Junction Box C283a. • Measure the resistance between auxiliary junction box, C283a-2, circuit 9-LB1 (BN), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new auxiliary junction box. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
C20 CHECK THE RH REAR PASSENGER DOOR AJAR SWITCH	

• Key in OFF position. • Disconnect: RH Rear Passenger Door Lock Actuator C804. • Connect a fused jumper wire between RH rear passenger door lock actuator C804-6, circuit 31-AA58 (BK), harness side and C804-8, circuit 31S-GL19 (BK/GN), harness side.  A0005553 • **Did the interior lamps tun OFF after 20-30 seconds?**	**Yes** INSTALL a new RH rear passenger door lock actuator/ajar switch. REFER to Section 419-01B . CLEAR the DTCs. REPEAT the self-test. **No** GO to C21 .
C21 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	
• Measure the resistance between RH rear passenger door lock actuator, C804-6, circuit 31-AA58 (BK), harness side and ground.  A0005554 • **Is the resistance less than 5 ohms?**	**Yes** GO to C22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C22 CHECK CIRCUIT 31S-GL19 (BK/GN) FOR AN OPEN	
• Disconnect: REM C420d. • Measure the resistance between RH rear passenger door lock actuator, C804-8, circuit 31S-GL19 (BK/GN), harness side and REM C420d-17, circuit 31S-GL19 (BK/GN), harness side.  A0004334 • **Is the resistance less than 5 ohms?**	**Yes** GO to C27 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C23 CHECK THE LH REAR PASSENGER DOOR AJAR SWITCH	

• Key in OFF position. • Disconnect: LH Rear Passenger Door Lock Actuator C704. • Connect a fused jumper wire between LH rear passenger door lock actuator, C704-6, circuit 31-AA58 (BK), harness side and C704-8, circuit 31S-GL12 (BK/OG), harness side.  A0005553 • **Did the interior lamps tun OFF after 20-30 seconds?**	**Yes** INSTALL a new LH rear passenger door lock actuator/ajar switch. REFER to Section 419-01B . CLEAR the DTCs. REPEAT the self-test. **No** GO to C24 .
C24 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	
• Measure the resistance between LH rear passenger door lock actuator C704-6, circuit 31-AA58 (BK), harness side and ground.  A0005554 • **Is the resistance less than 5 ohms?**	**Yes** GO to C25 . **No** REPAIR circuit 31-AA58 (BK). CLEAR the DTCs. REPEAT the self-test.
C25 CHECK CIRCUIT 31S-GL12 (BK/OG) FOR AN OPEN	
• Disconnect: REM C420c. • Measure the resistance between LH rear passenger door lock actuator C704-8, circuit 31S-GL12 (BK/OG), harness side and REM C420c-16, circuit 31S-GL12 (BK/OG), harness side.  A0004335 • **Is the resistance less than 5 ohms?**	**Yes** GO to C27 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C26 CHECK FOR CORRECT FEM OPERATION	
• Disconnect all FEM connectors. • Check for: ♦ corrosion ♦ pushed-out pins	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.

• Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
C27 CHECK FOR CORRECT REM OPERATION	
• Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Glove Compartment, LH and RH Map Lamps, LH and RH Vanity Mirror Lamps or LH and RH Grab Handle Lamps are Inoperative

Normal Operation

The demand lamps consist of the glove compartment lamp, LH and RH map lamps, LH and RH vanity mirror lamps and the LH and RH grab handle lamps. Switched system power is supplied to these lamps through SSP relay 3, and circuit 29S-LB2 (OG/BU). The glove compartment lamp uses ground circuit 31-LB8 (BK/OG). All other demand lamps are spliced into a common ground circuit 31-LB3 (BK/OG).

Possible Causes

- Circuit 29S-LB8 (OG) open
- Circuit 31-LB8 (BK/OG) open
- Circuit 29S-LB16 (OG/GN) open
- Circuit 31-LB16 (BK/RD) open
- Circuit 29S-LB23 (OG/WH) open
- Circuit 31-LB23 (BK/WH) open
- Circuit 29S-LB14 (OG) open
- Circuit 31-LB14 (BK) open
- Circuit 29S-LB21 (OG/BK) open
- Circuit 31-LB21 (BK) open
- Individual demand lamp
- Individual demand lamp switch

PINPOINT TEST D: THE GLOVE COMPARTMENT, LH AND RH MAP LAMPS, LH AND RH VANITY MIRROR LAMPS OR LH AND RH REAR GRAB HANDLE LAMPS ARE INOPERATIVE

Test Step	Result / Action to Take
D1 VERIFY LAMP SYMPTOM	
NOTE: If any of the interior lamps are also inoperative, refer to GO to Symptom Chart . If multiple lamps are inoperative, Go To Pinpoint Test C . • Verify the inoperative lamp. • **Is the glove compartment lamp inoperative?**	**Yes** GO to D2 . **No** If the LH hand visor lamp is inoperative, GO to D4 .

	If the RH hand visor lamp is inoperative, GO to D6 . If a map lamp is inoperative, GO to D8 . If the LH rear grab handle lamp is inoperative, GO to D9 . If the RH rear grab handle is inoperative, GO to D11 .
D2 CHECK CIRCUIT 29S-LB8 (OG) FOR AN OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: Glove Compartment Lamp And Switch C254. • Measure the voltage between glove compartment lamp and switch, C254-1, circuit 29S-LB8 (OG), harness side and ground.  A0005603 • **Is the voltage greater than 10 volts?**	**Yes** GO to D3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D3 CHECK CIRCUIT 31-LB8 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between glove compartment lamp and switch, C254-2, circuit 31-LB8 (BK/OG), harness side and ground.  A0062611 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new glove compartment lamp and switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D4 CHECK CIRCUIT 29S-LB16 (OG/GN) FOR OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: LH Vanity Mirror Lamp And Switch C907.	**Yes** GO to D5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

• Measure the voltage between LH vanity mirror lamp and switch C907-2, circuit 29S-LB16 (OG/GN), harness side and ground.  A0062634 • **Is the voltage greater than 10 volts?**	
D5 CHECK CIRCUIT 31-LB16 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between LH vanity mirror lamp and switch C907-1, circuit 31-LB16 (BK/RD), harness side and ground.  A0062635 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new LH vanity mirror lamp and switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAR the circuit. CLEAR the DTCs. REPEAT the self-test.
D6 CHECK CIRCUIT 29S-LB23 (OG/WH) FOR AN OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in OFF position. • Disconnect: RH Vanity Mirror Lamp And Switch C906. • Key in ON position. • Measure the voltage between RH vanity mirror lamp and switch C906-2, circuit 29S-LB23 (OG/WH), harness side and ground.  A0062634 • **Is the voltage greater than 10 volts?**	**Yes** GO to D7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D7 CHECK CIRCUIT 31-LB23 (BK/WH) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RH vanity mirror lamp and switch C906-1, circuit 31-LB23 (BK/WH), harness side and ground.	**Yes** INSTALL a new RH vanity mirror lamp and switch. CLEAR the DTCs. REPEAT the self-test. **No**

 A0062635 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D8 CHECK GROUND CIRCUIT TO MAP SWITCH	
• Key in OFF position. • Disconnect: Front Map Reading Lamp Switch C905 Or C910. • For the LH front map reading lamp switch measure the resistance between C910-4, circuit 31-LB13 (BK/BU), harness side and ground. For the RH front map reading lamp switch measure the resistance between C905-4, circuit 31-LB20 (BK/OG), harness side and ground.  A0005604 • **Are the resistance less than 5 ohms?**	**Yes** INSTALL a new front map lamp assembly. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D9 CHECK CIRCUIT 29S-LB14 (OG) FOR OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Disconnect: LH Rear Grab Handle Lamp And Switch C9009. • Measure the voltage between LH rear grab handle lamp and switch, C9009-1, circuit 29S-LB14 (OG), harness side and ground.  A0056617 • **Is the voltage greater than 10 volts?**	**Yes** GO to D10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D10 CHECK CIRCUIT 31-LB14 (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between LH rear grab handle lamp and switch, C9009-2, circuit 31-LB14 (BK), harness side and ground.	**Yes** INSTALL a new LH rear grab handle lamp and switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR

 A0056627 • **Is the resistance less than 5 ohms?**	the DTCs. REPEAT the self-test.
D11 CHECK CIRCUIT 29S-LB21 (OG/BK) FOR AN OPEN	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Key in OFF position. • Disconnect: RH Rear Grab Handle Lamp And Switch C9010. • Key in ON position. • Measure the voltage between RH rear grab handle lamp and switch C9010-1, circuit 29S-LB21 (OG/BK), harness side and ground.  A0056617 • **Is the voltage greater than 10 volts?**	**Yes** GO to D12 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D12 CHECK CIRCUIT 31-LB21 (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RH rear grab handle lamp and switch, C9010-2, circuit 31-LB21 (BK), harness side and ground.  A0056627 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new RH rear grab handle lamp and switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: The Interior Lamps Stay On Continuously Luggage Compartment Lamp Only

Normal Operation

The luggage compartment lamp is controlled through the REM. SSP relay 4 supplies power to the lamp through circuit 29S-LB4 (OG/BK). The luggage compartment lid ajar switch provides a ground signal to the REM through circuit 8-GL20 (WH/BK) which, in turn, provides a ground signal to the luggage compartment lamp through circuit 31S-LB25 (BK/BU).

Possible Causes

- Circuit 31S-LB25 (BK/BU) short to ground
- Circuit 31-GL20 (BK/RD) open
- Circuit 8-GL20 (WH/BK) open

- Luggage compartment lid ajar switch
- REM

PINPOINT TEST E: THE INTERIOR LAMPS STAY ON CONTINUOUSLY LUGGAGE COMPARTMENT LAMP ONLY

Test Step	Result / Action to Take
E1 RETRIEVE DIAGNOSTIC TROUBLE CODES	
• Use recorded results from REM self-test. • **Are any DTCs recorded?**	**Yes** If B1331, GO to E4 . For all other DTCs REFER to the REM Diagnostic Trouble Code (DTC) Index in this section. **No** GO to E2 .
E2 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH INPUT TO THE REM	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Connect the diagnostic tool. • Enter the following diagnostic mode on the diagnostic tool: PID/DATA Record and Monitor. • While opening and closing the luggage compartment lid, monitor the REM PID DECKLID. • **Do the REM PID values agree with the luggage compartment lid positions?**	**Yes** GO to E3 . **No** GO to E4 .
E3 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: REM C420a. • Disconnect: Luggage Compartment Lid Lamp C428. • Measure the resistance between the REM, C420a-11, circuit 31S-LB25 (BK/BU), harness side and ground.  A0065591 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to E7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E4 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH	

• Disconnect: Luggage Compartment Lid Ajar Switch C429. • Connect a fused (10A) jumper wire between the luggage compartment lid ajar switch C429-1, circuit 8-GL20 (WH/BK) and C429-2, circuit 31-GL20 (BK/RD) harness side.  A0062632 • **Does the luggage compartment lid lamp go OFF?**	**Yes** INSTALL a new luggage compartment lid ajar switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to E5 .
E5 CHECK CIRCUIT 31-GL20 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the luggage compartment lid ajar switch, C429-2, circuit 31-GL20 (BK/RD), harness side and ground.  A0062631 • **Is the resistance less than 5 ohms?**	**Yes** GO to E6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E6 CHECK CIRCUIT 8-GL20 (WH/BK) FOR AN OPEN	
• Disconnect: REM C420b. • Measure the resistance between the REM, C420b-14, circuit 8-GL20 (WH/BK) , harness side and luggage compartment lid ajar switch, C429-1, circuit 8-GL20 (WH/BK), harness side.  A0062630 • **Is the resistance less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E7 CHECK FOR CORRECT REM OPERATION	
• Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector.

	CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Luggage Compartment Lamp is Inoperative

Normal Operation

The luggage compartment lamp is controlled through the REM. SSP relay 4 supplies power to the lamp through circuit 29S-LB4 (OG/BK). The luggage compartment lid ajar switch provides a ground signal to the REM through circuit 8-GL20 (WH/BK) which, in turn, provides a ground signal to the luggage compartment lamp through circuit 31S-LB25 (BK/BU).

Possible Causes

- Luggage compartment lid ajar switch
- Battery junction box (BJB) fuse 4 (10A)
- BJB
- REM
- Circuit 29S-LB25 (OG/BU) open
- Circuit 31S-LB25 (BK/BU) open
- Circuit 31S-LB25 (BK/BU) short to ground
- 8-GL20 (WH/BK) short to ground

PINPOINT TEST F: THE LUGGAGE COMPARTMENT LAMP IS INOPERATIVE

Test Step	Result / Action to Take
F1 RETRIEVE REM DIAGNOSTIC TROUBLE CODES	
• Use recorded results from REM self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to REM Diagnostic Trouble Code (DTC) Index. **No** GO to F2 .
F2 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH INPUT TO THE REM	
NOTE: The ignition switch must be cycled from OFF to ON to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for switched system power operation. • Connect the diagnostic tool. • Enter the following diagnostic mode on the diagnostic tool: PID/DATA Record and Monitor. • While opening and closing the luggage compartment lid, monitor the REM PID DECKLID. • **Does the REM PID values DECKLID agree with the luggage compartment lid position?**	**Yes** GO to F3 . **No** GO to F8 .
F3 CHECK POWER TO THE BJB FUSE 4 (10A)	

• Disconnect: BJB fuse 4 (10A) • Key in ON position. • Measure the voltage between the BJB fuse 4 (10A) input side and ground.  A0004347 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL BJB fuse 4 (10A) andGO to F4 . **No** REPAIR supply circuit to the BJB. CLEAR the DTCs. REPEAT the self-test.
F4 CHECK CIRCUIT 29S-LB25 (OG/BU) FOR AN OPEN	
• Disconnect: Luggage Compartment Lid Lamp C428. • Measure the voltage between luggage compartment lid lamp, C428-1, circuit 29S-LB25 (OG/BU), harness side and ground.  A0062612 • **Is the voltage greater than 10 volts?**	**Yes** GO to F5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
F5 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR VOLTAGE	
• Measure the voltage between luggage compartment lid lamp, C428-2, circuit 31S-LB25 (BK/BU), harness side and ground.  A0062614 • **Is the voltage greater than 10 volts?**	**Yes** GO to F7 . **No** GO to F6 .
F6 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420a. • Measure the resistance between the REM, C420a-11, circuit 31S-LB25 (BK/BU), harness side and luggage compartment lid lamp, C428-2, circuit 31S-LB25 (BK/BU), harness side.  A0062613 • **Is the resistance less than 5 ohms?**	**Yes** GO to F10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

F7 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR SHORT TO BATTERY	
• Key in OFF position. • Disconnect: REM C420b. • Key in ON position. • Measure the voltage between the luggage compartment lid lamp, C428-2, circuit 31S-LB25 (BK/BU) harness side and ground.  A0062614 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to F10 .
F8 CHECK FOR A STUCK OR STICKING LUGGAGE COMPARTMENT AJAR SWITCH	
• Key in ON position. • Disconnect: Luggage Compartment Lid Ajar Switch C429. • While disconnecting the luggage compartment lid ajar switch observe luggage compartment lamp. • **Does the luggage compartment lid lamp go ON?**	**Yes** INSTALL a new luggage compartment lid ajar switch. TEST the system for normal operation. **No** GO to F9 .
F9 CHECK CIRCUIT 8-GL20 (WH/BK) FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: REM C420b. • Measure resistance between the luggage compartment lid ajar switch, C429-1, circuit 8-GL20 (WH/BK), harness side and ground.  A0062629 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to F10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
F10 CHECK FOR CORRECT REM OPERATION	
• Disconnect all REM connectors. • Check for: ♦ corrosion ♦ pushed-out pins • Connect all REM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern

	may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Daytime Running Lamps (DRL) Printable View (8 KB)

NOTE: DRL feature is available for Canadian vehicles only.

Daytime Running Lamps (DRL)

If the FEM is configured for daytime running lamps (DRL), this feature illuminates the high beam headlamps, pulse width modulated at a 40% duty cycle when the following conditions exist:

- the ignition switch is in the ON position.
- the headlamp switch is in the OFF or PARK position.
- the autolamps feature has not illuminated the exterior lamps.

Daytime Running Lamps (DRL)

Printable View (9 KB)

Refer to Wiring Diagrams Cell 87 for schematic and connector information.

Inspection and Verification

NOTE: When installing a new front electronic module (FEM), it must be reconfigured for this feature. Refer to Section 418-01 .

1. Verify the customer concern by operating the daytime running lamps (DRL) following these steps:
    1. Place the ignition switch in the RUN position.
    2. Place the headlamp switch in the OFF position.
    3. If the DRL does not operate, make sure the FEM is configured for DRL before proceeding to the next step.

2. Verify the high beam operation.
    1. Place the headlamp switch in the headlamps ON position.
    2. Place the multifunction switch in the high beam position.
       If the high beams operate correctly and the DRL operation is incorrect, install a new FEM. Refer to Section 419-10 . Test the system for normal operation.
       If the high beam operation is incorrect, refer to Section 417-01 .

Communications Network

Printable View (17 KB)

Anti-Lock Brake System/Traction Control (ABS/TC) Module Or Stability Assist Module (if equipped)

The ABS/TC module or stability assist module (if equipped) are on the standard corporate protocol (SCP) communications network. The ABS/TC module or stability assist module controls the brake pressure to the 4 wheels to keep the vehicle under control while braking. For additional information, refer to Section 206-09 .

Audio Control Module (ACM)

The ACM is connected to the SCP communications network and also to the audio control protocol (ACP) communications network. The ACM communicates with the compact disc player/changer using the ACP. The ACM uses the SCP communications network for diagnostics. For additional information on the ACM and the compact disc player/changer, refer to Section 415-01 .

Driver Door Module (DDM)

The DDM is connected to the SCP communications network. The DDM accepts the user memory set and recall buttons. The DDM then sends the memory set and recall commands to the other modules over the SCP communications network. The DDM also controls the driver mirror (memory positions are stored there and manual functions are controlled there). The driver seat module (DSM) controls the driver seat. The front electronic module (FEM) control the passenger mirror and adjustable pedals positions. The instrument cluster controls the steering column positions. For additional information, refer to Section 419-10 .

Driver Climate Control Seat Module

The driver climate control seat module is on the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network. The driver climate control seat module and duel automatic temperature control (DATC) module control the heating and cooling elements in the seat for passenger comfort. For additional driver climate control seat module information, refer to Section 501-10 .

DSM

The DSM is on the SCP communications network. The DSM controls the positioning and programming of the driver seat. For additional information, refer to Section 501-10 .

DATC Module

The DATC module is on the SCP communications network and the UBP communications network. The DATC module uses the SCP communications network to communicate with the diagnostic tool and other modules. The UBP communications network is used by the DATC module for communication with the driver climate control seat module. The DATC module controls automatic climate functions that maintain the vehicle interior temperature at a constant setting. For additional information, refer to Section 412-04 .

Electric Parking Brake Module

The electric parking brake module is connected to the SCP communications network. The module controls the solenoid which applies and releases the parking brake. For additional electric parking brake module information, refer to Section 206-05 .

FEM/Rear Electronic Module (REM)

The FEM and REM are connected to the SCP communications network. The FEM and the REM control both interior and exterior lighting and perimeter anti-theft functions. For additional information on interior lamps, refer to Section 417-02 . For additional information on exterior lighting, refer to Section 417-01 . For additional information on perimeter anti-theft, Section 419-01A .

Instrument Cluster

The instrument cluster is on the SCP communications network. It is an analog face cluster with a digital odometer. The instrument cluster displays a variety of information. For additional information, refer to Section 413-01 .

Passenger Climate Control Seat Module

The passenger climate control seat module is on the UBP communications network. The passenger climate control seat module and DATC module control the heating and cooling elements in the seat for passenger comfort. For additional passenger climate control seat module information, refer to Section 501-10 .

Parking Aid Module

The parking aid module is connected to the UBP communications network. The module controls sensors in the rear bumper that detect close objects when the transmission is in REVERSE. For additional information, refer to Section 413-13 .

Powertrain Control Module (PCM)

The PCM is on the controller area network (CAN) and the SCP communications network. The PCM uses the CAN to communicate with the diagnostic tool and utilizes the SCP communications network to communicate with other modules. The PCM controls the engine for better fuel economy, emissions control, failure mode detection and storage. Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.

Restraint Control Module (RCM)

The RCM is on the international standards organization (ISO) 9141 communications network. The RCM controls the deployment of the air bags based on sensor input. For additional information, refer to Section 501-20B .

Navigation System Module

The navigation system module is on the SCP communications network. The navigation system module communicates with the audio unit using a dedicated CAN. The vehicle navigation system provides a feature that will guide the user to any entered destination. The system uses the global positioning sensor (GPS), vehicle speed, and other sensor information to accurately establish the vehicle position. The navigation system module compares this position to the digital video disc (DVD) vector map. The system then provides the maneuvers required during the journey in order to arrive at the destination entered. For additional information, refer to Section 419-07 .

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

The vehicle has 4 communications networks: the controller area network (CAN), the standard corporate protocol (SCP) communications network, which is an unshielded twisted pair cable data communications network plus and data communications network minus, the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network, a single circuit communications network and the international standards organization (ISO) 9141 communications network, which is a single circuit communications network. All 4 communications networks are connected to the data link connector (DLC). This makes diagnosis and testing of these systems easier by allowing one smart tester to be able to diagnose and control any module on the 2 communications networks from one connector. The DLC can be found under the instrument panel between the steering column and the radio.

The CAN is a high speed communications network used for powertrain communication. The CAN remains operational even with the severing of one of the CAN circuits. Communications also continue if one of the CAN circuits are shorted to ground or voltage, or if some but not all termination resistors are lost.

The SCP communications network remains operational even with the severing of one of the SCP communications network circuits. Communications also continue if one of the SCP communications network circuits are shorted to ground or voltage, or if some but not all termination resistors are lost.

The ISO 9141 communications network does not permit intermodule communication. When the diagnostic tool communicates to modules on the ISO 9141 communications network, the diagnostic tool must ask for all information; the modules cannot initiate communications. The ISO 9141 communications network does not function if the circuit is shorted to ground or battery voltage. Also, if one of the modules on the ISO 9141 communications network loses power or shorts internally, communications to that module fail.

The UBP communications network does not function if the circuit is shorted to ground or voltage. The UBP communications network is different from the ISO 9141 communications network in that it allows intermodule communication.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Central junction box (CJB) fuse 6 (10A) • Wiring harness • Loose or corroded connections

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, Go To Pinpoint Test T .

6. Go To Pinpoint Test PC .

Communications Network Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
U1262	SCP (J1850) Communication Bus Fault	Network Fault	Go To Pinpoint Test O .
U1262	SCP (J1850) Communication Bus Fault	Instrument Cluster	Go To Pinpoint Test D .
U1262	SCP (J1850) Communication Bus Fault	ABS/TC Module	Go To Pinpoint Test A .
U1262	SCP (J1850) Communication Bus Fault	Message Center	Go To Pinpoint Test O .
U1950	UBP Communication Bus Fault	Parking Aid Module	Go To Pinpoint Test S .

System Precheck

PINPOINT TEST PC: DATA LINK DIAGNOSTICS NETWORK TEST

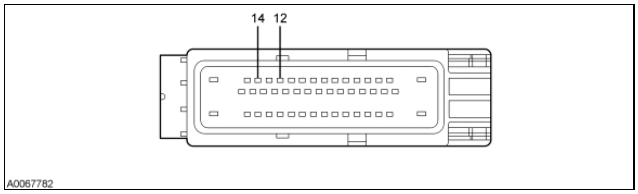
Test Step	Result / Action to Take

PC1 RUN THE DATA LINK DIAGNOSTICS NETWORK TEST	
• Carry out the diagnostic tool data link test. • **Is system passed obtained?**	**Yes** Test passed. RETURN to the Symptom Chart of the section for the module in question. **No** If no response from the diagnostic tool, Go To Pinpoint Test T . If ISO, CAN, UBP, or SCP = SOME ECUS NO RESP/NOT EQUIP, REFER to the Symptom Chart. If ISO = ALL ECUS NO RESP/NOT EQUIP, Go To Pinpoint Test P . If SCP = ALL ECUS NO RESP/NOT EQUIP, Go To Pinpoint Test O . If the module in question is NO RESPONSE/NOT EQUIPPED, REFER to the GO to Symptom Chart . If CAN = ALL ECUS NO RESP/NOT EQUIP, Go To Pinpoint Test H .

Symptom Chart

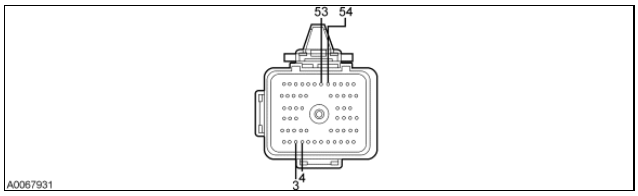
Symptom Chart
Connector Circuit Reference

Anti-Lock Brake System/Traction Control (ABS/TC) Module C155



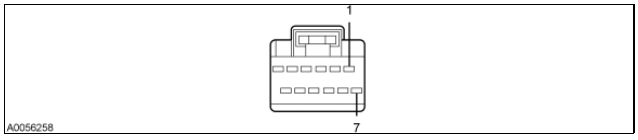
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	4-CF6 (GY) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the ABS/TC module, and the data link connector (DLC). Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
14	5-CF6 (BU) SCP communications network circuit	Less than 5 ohms between the ABS/TC module, and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

Powertrain Control Module (PCM) C175b



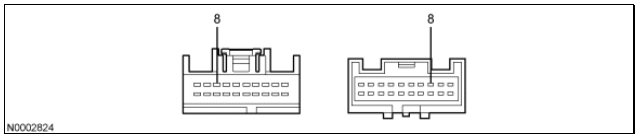
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	4-RE8 (GY) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the PCM and the data link connector (DLC). Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
4	5-RE8 (BU) SCP communications network circuit	Less than 5 ohms between the PCM and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
53	4-EC7 (GY/RD) SCP communications network circuit	Less than 5 ohms between the PCM and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
54	5-EC-7 (BU/RD) SCP communications network circuit	Less than 5 ohms between the PCM and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

Front Electronic Module (FEM) C201c



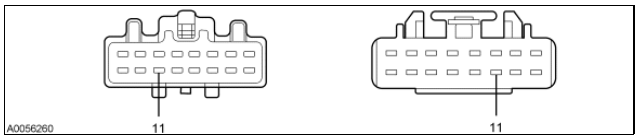
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	5-EG11 (BU) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the FEM and the data link connector (DLC). Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
7	4-EG11 (GY) SCP communications network circuit	Less than 5 ohms between the FEM and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

In-line C212F, C212M



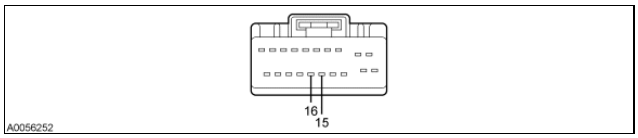
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	4-EE10 (GY/BK) international standards organization (ISO) 9141 communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all ISO 9141 communications network modules disconnected.

In-line C213M, C213F



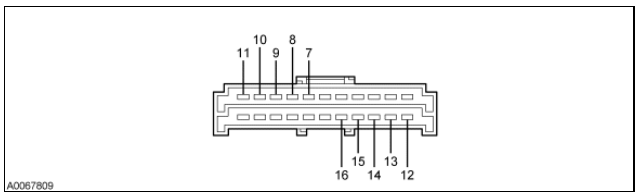
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	4-HC1 (GY/RD) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all UBP communications network modules disconnected.

Instrument Cluster C220b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15	4-EG8 (GY/VT) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the instrument cluster and the data link connector (DLC). Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
16	5-EG8 (BU/WH) SCP communications network circuit	Less than 5 ohms between the instrument cluster and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

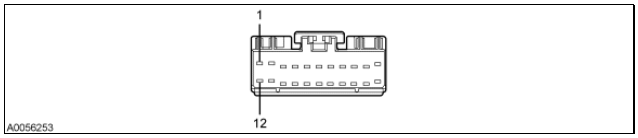
Joint Connector No. 4 C223



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	5-EG10 (BU/YE) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
8	5-FA10 (BU/YE) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
9	5-EG7 (BU/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
10	5-EG8 (BU/WH) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
11	5-EG1 (BU/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
12	4-EG1 (GY/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
13	4-EG8 (GY/VT) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
14	4-EG7 (GY/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground

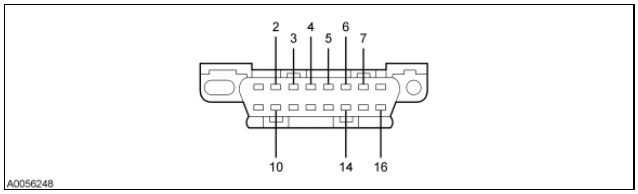
		with all SCP communications network modules disconnected.
15	4-FA10 (GY/BK) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
16	4-EG10 (GY/BK) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

Dual Automatic Temperature Control (DATC) C228a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	5-FA10 (BU/YE) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the DATC and the data link connector (DLC). Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.
12	4-FA10 (GY/BK) SCP communications network circuit	Less than 5 ohms between the DATC and the DLC. Greater than 10,000 ohms to ground with all SCP communications network modules disconnected.

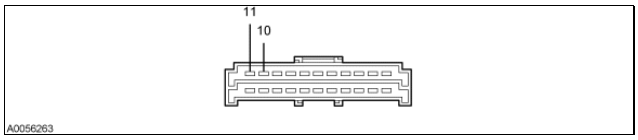
Data Link Connector (DLC) C251



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	4-EG7 (GY/RD) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the data link connector (DLC) and the module in concern disconnected. Greater than 10,000 ohms between the DLC and ground with all the SCP communications network modules disconnected.

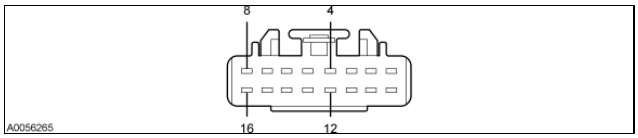
3	4-ED6 (GY) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the DLC and the module in concern disconnected. Greater than 10,000 ohms between the DLC and ground with all the UBP communications network modules disconnected.
4	31-ED6 (BK/YE) ground	Less than 5 ohms to ground.
5	91-ED6 (BN) ground	Less than 5 ohms to ground.
6	4-EC7 (GY/RD) CAN circuit	Less than 5 ohms between the DLC and the module in concern disconnected. Greater than 10,000 ohms between the DLC and ground with all the CAN modules disconnected.
7	4-EE10 (GY/BK) ISO 9141 communications network circuit	Less than 5 ohms between the DLC and the module in concern disconnected. Greater than 10,000 ohms between the DLC and ground with all the ISO 9141 communications network modules disconnected.
10	5-EG7 (BU/RD) SCP communications network circuit	Less than 5 ohms between the DLC and the module in concern disconnected. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
14	5-EC7 (BU/RD) CAN circuit	Less than 5 ohms between the DLC and the module in concern disconnected. Greater than 10,000 ohms between the DLC and ground with all the CAN modules disconnected.
16	29-ED6 (OG/YE) B+ power feed	10 volts or greater with the key in the ON position. Greater than 10,000 ohms to ground.

Joint Connector No. 1 C261



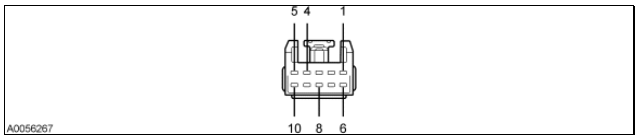
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	4-ED6 (GY) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.
11	4-HC1 (GY/RD) UBP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.

Interior Auxiliary Junction Box (AJB) C283a, C283b



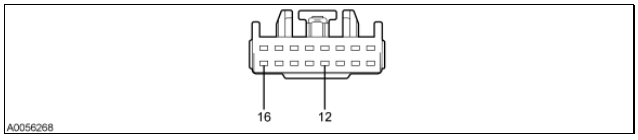
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4 (C283a)	5-EG13 (BU/BK) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
4 (C283b)	5-CG16 (BU/RD) SCP communications network circuit without a navigation system. 5-EG1 (BU) SCP communications network circuit with a navigation system	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
8 (C283a)	4-EG13 (GY/OG) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected with all network modules disconnected.
8 (C283b)	4-EG16 (GY/RD) SCP communications network circuit without navigation system. 4-EG1 (GY) SCP communications network circuit with navigation system	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
12 (C283a)	5-AH80 (BU/OG) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
12 (C283b)	5-EG12 (BU/OG) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
16 (C283a)	4-AH80 (GY/WH) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
16 (C283b)	4-EG12 (GY/WH) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Interior Auxiliary Junction Box (AJB) C283c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	5-RE8 (BU) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
4	4-RE8 (GY) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
5	4-CF6 (GY) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
6	5-CF6 (BU) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
8	5-EG11 (BU) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
10	4-EG11 (GY) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

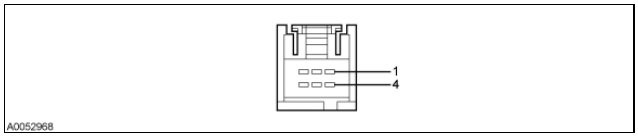
Interior Auxiliary Junction Box (AJB) C283d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	5-EG1 (BU/RD) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

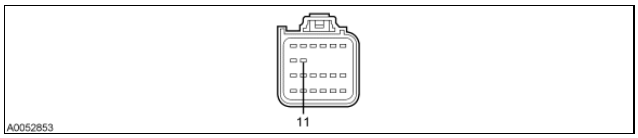
16	4-EG1 (GY/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Audio Control Module (ACM) C290c



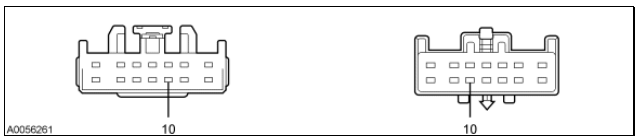
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-EG10 (GY/BK) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the audio unit and data link connector (DLC). Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
4	5-EG10 (BU/YE) SCP communications network circuit	Less than 5 ohms between the audio unit and DLC. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Restraint Control Module (RCM) C310a



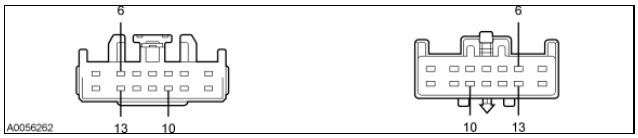
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	4-EE1 (GY/RD) international standards organization (ISO) 9141 communications network circuit	Less than 5 ohms between the data link connector (DLC) and the RCM. Greater than 10,000 ohms to ground with all the ISO 9141 communications network modules disconnected.

In-line C313F, C313M



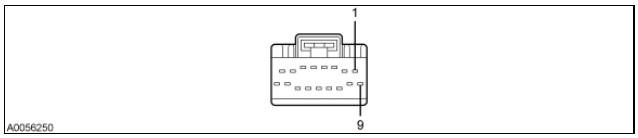
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	4-HC22 (GY) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.

In-line C315F, C315M



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	4-AH80 (GY/WH) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
10	4-HC21 (GY/OG) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.
13	5-AH80 (BU/OG) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

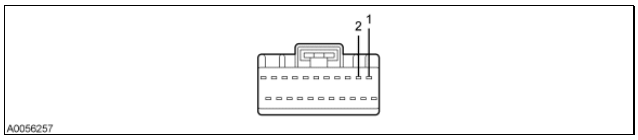
Driver Seat Module (DSM) C341c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-AH80 (GY/WH) standard corporate protocol (SCP) communications	Less than 5 ohms between the data link connector (DLC) and the DSM. Greater than 10,000 ohms to

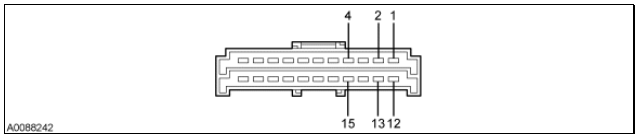
	network circuit	ground with all the SCP communications network modules disconnected.
9	5-AH80 (BU/OG) SCP communications network circuit	Less than 5 ohms between the DLC and the DSM. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Rear Electronic Module (REM) C420b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-EG12 (GY/WH) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the REM and the data link connector (DLC). Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
2	5-EG12 (BU/OG) SCP communications network circuit	Less than 5 ohms between the REM and the DLC. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

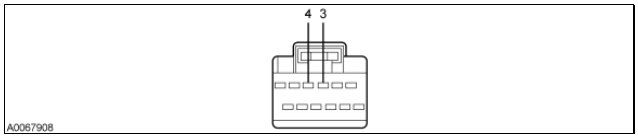
Joint Connector No. 5 C427



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-EG1 (GY/RD) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the module connector, data link connector (DLC) or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
2	4-CG16 (GY/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
4	4-EG17 (GY/BK) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
12		

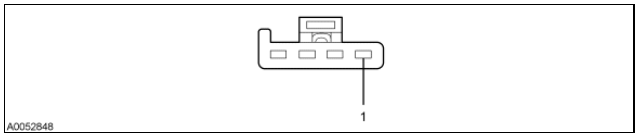
	5-EG1 (BU/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
13	5-CG16 (BU/RD) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
15	5-EG17 (BU/YE) SCP communications network circuit	Less than 5 ohms between the module connector, DLC or in-line connector. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	4-EG13 (GY/OG) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the driver door module and the data link connector (DLC). Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected
4	5-EG13 (BU/BK) SCP communications network circuit	Less than 5 ohms between the driver door module and the DLC. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

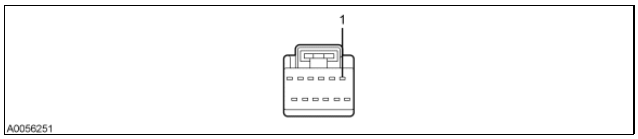
Climate Control Seat Module Driver C3031a, Passenger C3036a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1 (C3031a)	4-HC21 (GY/OG) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the data link connector (DLC) and the driver climate control seat module. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.
1 (C3036a)	4-HC22 (GY) UBP communications network circuit	Less than 5 ohms between the DLC and the passenger climate control seat module. Greater than

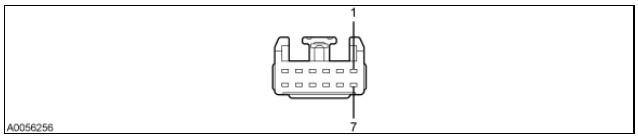
		10,000 ohms to ground with all the UBP communications network modules disconnected.

Parking Aid Module C4014b



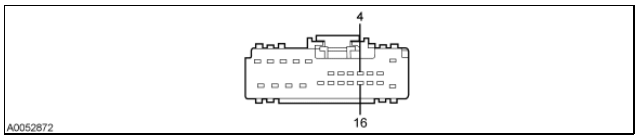
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-GN10 (GY) universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit	Less than 5 ohms between the data link connector (DLC) and the parking aid module. Greater than 10,000 ohms to ground with all the UBP communications network modules disconnected.

Electronic Parking Brake Module C4205b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	4-CG16 (GY/RD) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the electronic parking brake module and the data link connector (DLC). Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
7	5-CG16 (BU/RD) SCP communications network circuit	Less than 5 ohms between the electronic parking brake module and the DLC. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Navigation System Module C4209



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	4-EG17 (GY/BK) standard corporate protocol (SCP) communications network circuit	Less than 5 ohms between the navigation system module and the data link connector (DLC). Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.
16	5-EG17 (BU/YE) SCP communications network circuit	Less than 5 ohms between the navigation system module and the DLC. Greater than 10,000 ohms to ground with all the SCP communications network modules disconnected.

Pinpoint Test A: The Anti-Lock Brake/Traction Control (ABS/TC) Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The ABS/TC module communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-CF6 (GY) and 5-CF6 (BU). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost communications can continue. Check circuits 4-CF6 (GY) and 5-CF6 (BU) between the ABS/TC module C155 and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in circuit 4-CF6 (GY) or 5-CF6 (BU), damage to the DLC C251, damage to the ABS/TC module C155, a problem in the interior auxiliary junction box (AJB) C283c, interior AJB C283d or joint connector No. 4 C223.

Possible Causes

- circuits 4-CF6 (GY) or 5-CF6 (BU) shorted to ground or open
- ABS/TC module C155
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- DLC C251
- ABS/TC module

PINPOINT TEST A: THE ANTI-LOCK BRAKE/TRACTION CONTROL (ABS/TC) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
A1 CHECK THE ABS/TC MODULE FOR DAMAGE	
• Key in OFF position. • Disconnect: ABS/TC module C155. • Inspect the ABS/TC module C155 for damage. • **Is the ABS/TC module C155 OK?**	**Yes** GO to A2 . **No** REPAIR the ABS/TC module C155 as necessary. TEST the system for normal operation.

A2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE ABS/TC MODULE C155	
• Measure the resistance between the ABS/TC module C155-12, circuit 4-CF6 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0067783 • Measure the resistance between the ABS/TC module C155-14, circuit 5-CF6 (BU), harness side and the C251-10, circuit 5-EG7 (BU/RD), harness side.  A0067784 • **Are the resistances less than 5 ohms?**	**Yes** GO to A7 . **No** GO to A3 .
A3 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283C AND THE ABS/TC MODULE C155	
• Disconnect: Interior AJB C283c. • Measure the resistance between the ABS/TC module C155-12, circuit 4-CF6 (GY), harness side and the interior AJB C283c-5, circuit 4-CF6 (GY), harness side.  A0067785 • Measure the resistance between the ABS/TC module C155-14, circuit 5-CF6 (BU), harness side and the interior AJB C283c-6, circuit 5-CF6 (BU), harness side.  A0067786 • **Are the resistances less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
A4 CHECK FOR AN OPEN BETWEEN THE INTERIOR	

AJB C283C AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283c-5, component side.  A0004355 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283c-6, component side.  A0004360 • **Are the resistances less than 5 ohms?**	**Yes** GO to A5 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
A5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0004356 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0004361 • **Are the resistances less than 5 ohms?**	**Yes** GO to A6 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
A6 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 4 C223	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4. TEST the system for normal operation.
A7 CHECK FOR CORRECT ABS/TC MODULE OPERATION	

• Disconnect all the ABS/TC module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the ABS/TC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS/TC module. REFER to Section 206-09 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The Front Electronic Module (FEM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The FEM communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG11 (GY) and 5-EG11 (BU). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-EG11 (GY) and 5-EG11 (BU) between the FEM C201c and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuits 4-EG11 (GY) and 5-EG11 (BU), damage to the DLC C251, damage to the FEM C201c, or a problem with in-line connectors, interior auxiliary junction box (AJB) C283c, interior AJB C283d or joint connector No. 4 C223.

Possible Causes

- circuit 4-EG11 (GY) or circuit 5-EG11 shorted to ground or open
- FEM C201c
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- DLC C251
- FEM

PINPOINT TEST B: THE FRONT ELECTRONIC MODULE (FEM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
B1 CHECK THE FEM C201C FOR DAMAGE	
• Key in OFF position. • Disconnect: FEM C201c. • Inspect the FEM C201c for damage; repair as necessary. • **Is the FEM C201c OK?**	**Yes** GO to B2 . **No** GO to B7 .
B2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE FEM C201C	
• Measure the resistance between the FEM C201c-7, circuit 4-EG11 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004363 • Measure the resistance between the FEM C201c-1, circuit 5-EG11 (BU), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004366 • **Is the resistance less than 5 ohms?**	**Yes** GO to B7 . **No** GO to B3 .
B3 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE FEM C201C	
• Measure the resistance between the FEM C201c-7, circuit 4-EG11 (GY), harness side and the interior AJB C283c-10, circuit 4-EG11 (GY), harness side.	**Yes** GO to B4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 A0004364 • Measure the resistance between the FEM C201c-1, circuit 5-EG11 (BU), harness side and the interior AJB C283c-8, circuit 5-EG11 (BU), harness side.  A0004367 • **Is the resistance less than 5 ohms?**	
B4 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283c-10, component side.  A0004365 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283c-8, component side.  A0004368 • **Are the resistances less than 5 ohms?**	**Yes** GO to B5 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
B5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.	**Yes** GO to B6 . **No** REPAIR the circuit in question. CARRY OUT the data link diagnostics test.

 A0067841 • Measure the resistance between the interior C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067842 • **Are the resistances less than 5 ohms?**	
B6 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC and joint connector No. 4 C223. CARRY OUT the data link diagnostics test. **No** REPAIR joint connector No. 4. TEST the system for normal operation.
B7 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the data link diagnostics test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded

	connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: The Restraint Control Module (RCM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The RCM communicates with the diagnostic tool through the international standards organization (ISO) 9141 communications network circuit 4-EE1 (GY/RD). If circuit 4-EE1 (GY/RD) becomes open or shorted to ground communications to that module is not possible. Check circuit 4-EE1 (GY/RD) between the RCM C310a and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in circuit 4-EE1 (GY/RD), damage to the DLC C251, in-line C212 or damage to the RCM C310a.

Possible Causes

- circuit 4-EE1 (GY/RD) shorted to ground or open
- in-line C212
- RCM C310a
- DLC C251
- RCM

PINPOINT TEST C: THE RESTRAINT CONTROL MODULE (RCM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
C1 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RCM C310A AND THE DATA LINK CONNECTOR (DLC) C251	
• Key in OFF position. • Deactivate the air bag system. Refer to Section 501-20B . • Disconnect: RCM C310a. • Inspect the RCM C310a for damage. • **Is the RCM C310a OK?**	**Yes** GO to C2 . **No** REPAIR the RCM C310a as necessary. TEST the system for normal operation.
C2 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RCM C310A AND THE DLC C251	
• Measure the resistance between the DLC C251-7, circuit 4-EE10 (GY/BK), harness side and the RCM C310a-11, circuit 4-EE1 (GY/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C4 . **No** GO to C3 .

C3 CHECK FOR AN OPEN CIRCUIT BETWEEN THE DLC C251 AND IN-LINE C212M	
• Disconnect: In-Line C212. • Measure the resistance between the DLC C251-7, circuit 4-EE10 (GY/BK), harness side and in-line C212M-8, circuit 4-EE10 (GY/BK), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between the RCM C310a and in-line C212F. TEST the system for normal operation. **No** REPAIR the circuit between the DLC C251 and in-line C212M. TEST the system for normal operation.
C4 CHECK FOR CORRECT RCM OPERATION	

• Disconnect all the RCM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the RCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RCM. REFER to Section 501-20B . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Instrument Cluster Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The instrument cluster communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG7 (GY/RD) and 5-EG7 (BU/RD). If one of the communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost communications can continue. Check circuits 4-EG7 (GY/RD) and 5-EG7 (BU/RD) between the instrument cluster C220b and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in circuit 4-EG7 (GY/RD) and 5-EG7 (BU/RD), damage to the DLC C251, joint connector No. 4 or damage to the instrument cluster C220b.

Possible Causes

- circuits 4-EG7 (GY/RD) or 5-EG7 (BU/RD) shorted to ground or open
- joint connector No. 4 C223
- instrument cluster C220b
- DLC C251
- instrument cluster

PINPOINT TEST D: THE INSTRUMENT CLUSTER DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
D1 CHECK THE INSTRUMENT CLUSTER C220B FOR DAMAGE	
• Key in OFF position. • Disconnect: Instrument Cluster C220b. • Inspect the instrument cluster C220b for damage. • **Is the instrument cluster C220b OK?**	**Yes** GO to D2 . **No** REPAIR the instrument cluster C220b as necessary. TEST the system for normal operation.
D2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE INSTRUMENT CLUSTER C220B	
• Measure the resistance between the instrument cluster C220b-15, circuit 4-EG8 (GY/VT), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004371 • Measure the resistance between the instrument cluster C220b-16, circuit 5-EG8 (BU/WH), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004374 • **Is the resistance less than 5 ohms?**	**Yes** GO to D5 . **No** GO to D3 .
D3 CHECK FOR AN OPEN BETWEEN INSTRUMENT CLUSTER C220B AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the instrument cluster C220b-15, circuit 4-EG8 (GY/VT), harness side and joint connector No. 4 C223-13, circuit 4-EG8 (GY/VT), harness side.	**Yes** GO to D4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 A0004372 • Measure the resistance between the instrument cluster C220b-16, circuit 5-EG8 (BU/WH), harness side and joint connector No. 4 C223-10, circuit 5-EG8 (BU/WH), harness side.  A0067810 • **Is the resistance less than 5 ohms?**	
D4 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-10, component side.  A0004376 • Measure the resistance between joint connector No. 4 C223-13, component side and joint connector No. 4 C223-14, component side.  A0004373 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. TEST the system for normal operation. **No** REPAIR joint connector No. 4 as necessary. TEST the system for normal operation.
D5 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	

• Disconnect all the instrument cluster connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the instrument cluster connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this

	time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: No Powertrain Control Module (PCM) Standard Corporate Protocol (SCP) Communications Network Communication

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The PCM communicates with the modules through the standard corporate protocol (SCP) communications network. Circuits 4-RE8 (GY) and 5-RE8 (BU) receive and transmit data from the PCM to the modules. Degraded SCP communications network performance occurs if one communications network circuit is open, shorted to ground or voltage, or if one but not all termination resistors are lost.

Possible Causes

- circuits 4-RE8 (GY) or 5-RE8 (BU) shorted to ground or open
- PCM C175b
- data link connector (DLC) C251
- PCM

PINPOINT TEST E: NO POWERTRAIN CONTROL MODULE (PCM) STANDARD CORPORATE PROTOCOL (SCP) COMMUNICATIONS NETWORK COMMUNICATION

Test Step	Result / Action to Take
E1 CHECK THE PCM C175B FOR DAMAGE	
• Key in OFF position. • Disconnect: PCM C175b. • Inspect the PCM C175b for damage. • **Is the PCM C175b OK?**	**Yes** GO to E2 . **No** REPAIR the PCM C175b as necessary. TEST the system for normal operation.
E2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE PCM C175B	
• Measure the resistance between the PCM C175b-3, circuit 4-RE8 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  N0002823 • Measure the resistance between the PCM C175b-4, circuit 5-RE8 (BU), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.	**Yes** GO to E3 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 N0002826 • **Are the resistances less than 5 ohms?**	
E3 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	CARRY OUT the data link diagnostics test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Dual Automatic Temperature Control (DATC) Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The DATC module communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-FA10 (GY/BK) and 5-FA10 (BU/YE). If one of the communications network circuits becomes shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-FA10 (GY/BK) and 5-FA10 (BU/YE) between the DATC module C228a and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in circuits 4-FA10 (GY/BK) or 5-FA10 (BU/YE), damage to the DLC C251, the DATC module C228a, or in joint connector No. 4 C223.

Possible Causes

- circuit 4-FA10 (GY/BK) or 5-FA10 (BU/YE) shorted to ground or open
- DATC module C228a
- joint connector No. 4 C223
- DLC C251
- DATC module

PINPOINT TEST F: THE DUAL AUTOMATIC TEMPERATURE CONTROL (DATC) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
F1 CHECK THE DATC MODULE C228A FOR DAMAGE	

• Key in OFF position. • Disconnect: DATC Module C228a. • Inspect the DATC module C228a for damage. • **Is the DATC module C228a OK?**	**Yes** GO to F2 . **No** REPAIR the DATC module C228a as necessary. TEST the system for normal operation.
F2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE DATC MODULE C228A	
• Measure the resistance between the DATC module C228a-12, circuit 4-FA10 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004383 • Measure the resistance between the DATC module C228a-1, circuit 5-FA10 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004386 • **Are the resistances less than 5 ohms?**	**Yes** GO to F5 . **No** GO to F3 .
F3 CHECK FOR AN OPEN BETWEEN THE DATC MODULE C228A AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the DATC module C228a-12, circuit 4-FA10 (GY/BK), harness side and joint connector No. 4 C223-15, circuit 4-FA10 (GY/BK), harness side.  A0067813 • Measure the resistance between the DATC module C228a-1, circuit 5-FA10 (BU/YE), harness side and joint connector No. 4 C223-8, circuit 5-FA10 (BU/YE), harness side.	**Yes** GO to F4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 A0067814 • **Are the resistances less than 5 ohms?**	
F4 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-14, component side and joint connector No. 4 C223-15, component side.  A0004385 • Measure the resistance between joint connector No. 4 C223-8, component side and joint connector No. 4 C223-9, component side.  A0004388 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
F5 CHECK FOR CORRECT DATC MODULE OPERATION	

• Disconnect all the DATC module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the DATC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DATC module. REFER to Section 412-04 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test G: The Audio Control Module (ACM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The ACM module communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG10 (GY/BK) and 5-EG10 (BU/YE). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-EG10 (GY/BK) and 5-EG10 (BU/YE) between the ACM C290c and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuits 4-EG10 (GY/BK) and 5-EG10 (BU/YE), damage to the DLC C251, the ACM C290c, or joint connector No. 4 C223.

Possible Causes

- circuits 4-EG10 (GY/BK) or 5-EG10 (BU/YE) shorted to ground or open
- ACM C290c
- joint connector No. 4 C223
- DLC C251
- ACM

PINPOINT TEST G: THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
G1 CHECK THE ACM C290C FOR DAMAGE	
• Key in OFF position. • Disconnect: ACM C290c. • Inspect the ACM C290c for damage. • **Is the ACM C290c OK?**	**Yes** GO to G2 . **No** REPAIR the ACM C290c as necessary. TEST the system for normal operation.
G2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE ACM	
• Measure the resistance between the ACM C290c-1, circuit 4-EG10 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  N0002827 • Measure the resistance between the ACM C290c-4, circuit 5-EG10 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.	**Yes** GO to G5 . **No** GO to G3 .

 N0002828 • **Are the resistances less than 5 ohms?**	
G3 CHECK FOR AN OPEN BETWEEN THE ACM AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the ACM C290c-1, circuit 4-EG10 (GY/BK), harness side and joint connector No. 4 C223-16, circuit 4-EG10 (GY/BK), harness side.  N0002829 • Measure the resistance between the ACM C290c-4, circuit 5-EG10 (BU/YE), harness side and joint connector No. 4 C223-7, circuit 5-EG10 (BU/YE), harness side.  N0002830 • **Are the resistances less than 5 ohms?**	**Yes** GO to G4 . **No** REPAIR the circuit in question. TEST the system for normal operation.
G4 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-14, component side and joint connector No. 4 C223-16, component side.  A0004391 • Measure the resistance between joint connector No. 4 C223-7, component side and joint connector No. 4 C223-9, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	
G5 CHECK FOR CORRECT ACM OPERATION	

• Disconnect all the ACM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the ACM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ACM. REFER to Section 415-01 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test H: The Powertrain Control Module (PCM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The PCM communicates with the diagnostic tool through the controller area network (CAN) circuits 4-EC7 (GY/RD) and 5-EC7 (BU/RD). If one of the CAN communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-EC7 (GY/RD) and 5-EC7 (BU/RD) between the PCM C175b and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in circuit 4-EC7 (GY/RD) or 5-EC7 (BU/RD), damage to the DLC C251, or damage to the PCM C175b.

Possible Causes

- 4-EC7 (GY/RD) or 5-EC7 (BU/RD) shorted to ground or open
- PCM C175b
- DLC C251
- PCM

PINPOINT TEST H: THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
H1 CHECK THE PCM C175B FOR DAMAGE	
• Key in OFF position. • Disconnect: PCM C175b. • Inspect the PCM C175b for damage. • **Is the PCM C175b OK?**	**Yes** GO to H2 . **No** REPAIR the PCM C175b as necessary.

	TEST the system for normal operation.
H2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE PCM C175B	
• Measure the resistance between the PCM C175b-53, circuit 4-EC7 (GY/RD), harness side and the DLC C251-6, circuit 4-EC7 (GY/RD), harness side.  • Measure the resistance between the PCM C175b-54, circuit 5-EC7 (BU/RD), harness side and the DLC C251-14, circuit 5-EC7 (BU/RD), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to H3 . **No** REPAIR the circuit in question. TEST the system for normal operation.
H3 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test I: The Driver Seat Module (DSM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The DSM communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-AH80 (GY/WH) and 5-AH80 (BU/OG). If circuit 4-AH80 (GY/WH) or 5-AH80 (BU/OG) becomes open or shorted to ground, communications to that module is not possible. Check circuits 4-AH80 (GY/WH) and 5-AH80 (BU/OG) between the DSM C341c and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-AH80 (GY/WH) or 5-AH80 (BU/OG), damage to the DLC C251, damage to the DSM C341c, or a problem with the interior auxiliary junction box (AJB) C283c, interior AJB C283d or

joint connector No. 4 C223.

Possible Causes

- circuit 4-AH80 (GY/WH) or 5-AH80 (BU/OG) shorted to ground or open
- DSM C341c
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- DLC C251
- DSM

PINPOINT TEST I: THE DRIVER SEAT MODULE (DSM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
I1 CHECK THE DSM 341C FOR DAMAGE	
• Key in OFF position. • Disconnect: DSM C341c. • Inspect the DSM C341c for damage. • **Is the DSM C341c OK?**	**Yes** GO to I2 . **No** REPAIR the DSM C341c as necessary. TEST the system for normal operation.
I2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE DSM 341C	
• Measure the resistance between the DSM C341c-1, circuit 4-AH80 (GY/WH), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004409 • Measure the resistance between the DSM C341c-9, circuit 5-AH80 (BU/OG), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004413 • **Are the resistances less than 5 ohms?**	**Yes** GO to I7 . **No** GO to I3 .
I3 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283A AND THE DSM 341C	

• Disconnect: Interior AJB C283a. • Measure the resistance between the DSM C341c-1, circuit 4-AH80 (GY/WH), harness side and the interior AJB C283a-16, circuit 4-AH80 (GY/WH), harness side.  A0067938 • Measure the resistance between the DSM C341c-9, circuit 5-AH80 (BU/OG), harness side and the interior AJB C283a-12, circuit 5-AH80 (BU/OG), harness side.  A0004414 • **Are the resistances less than 5 ohms?**	**Yes** GO to I4 . **No** Repair the circuit in question. TEST the system for normal operation.
I4 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C293d. • Measure the resistance between the interior AJB C283a-16, component side and the interior AJB C283d-16, component side.  A0004417 • Measure the resistance between the interior AJB C283a-12, component side and the interior AJB C283d-12, component side.  A0004416 • **Are the resistances less than 5 ohms?**	**Yes** GO to I5 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
I5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	

• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067818 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067818 • **Are the resistances less than 5 ohms?**	**Yes** GO to I6 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test in this section.
I6 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 4 C223 PINS	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
I7 CHECK FOR CORRECT DSM OPERATION	
• Disconnect all the DSM connectors. • Check for: • corrosion	**Yes** INSTALL a new DSM. REFER to Section 419-10 . TEST the system for normal operation.

• push-out pins • Connect all the DSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	CARRY OUT the diagnostic tool data link test. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: The Driver Door Module (DDM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The DDM communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG13 (GY/OG) and 5-EG13 (GY/OG). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost communications can continue. Check circuits 4-EG13 (GY/OG) and 5-EG13 (GY/OG) between the DDM C501a and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-EG13 (GY/OG) or 5-EG13 (GY/OG), damage to the DLC C251, damage to the DDM C155a, or a problem in the interior auxiliary junction box (AJB) C283c, interior AJB C283d or joint connector No. 4 C223.

Possible Causes

- circuits 4-EG13 (GY/OG) and 5-EG13 (GY/OG) shorted to ground or open
- DDM C501a
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- DLC C251
- DDM

PINPOINT TEST J: THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
J1 CHECK THE DDM C501A FOR DAMAGE	
• Key in OFF position. • Disconnect: DDM C501a. • Inspect the DDM C501a for damage. • **Is the DDM C501a OK?**	**Yes** GO to J2 . **No** REPAIR the DDM C501a as necessary. TEST the system for normal operation.
J2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE DDM C501A	

• Measure the resistance between the DDM C501a-3, circuit 4-EG13 (GY/OG), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004417 • Measure the resistance between the DDM C501a-4, circuit 5-EG13 (BU/BK), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004420 • **Are the resistances less than 5 ohms?**	**Yes** GO to J7 . **No** GO to J3 .
J3 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283A AND THE DDM C501A	
• Disconnect: Interior AJB C283a. • Measure the resistance between the DDM C501a-3, circuit 4-EG13 (GY/OG), harness side and the interior AJB C283a-8, circuit 4-EG13 (GY/OG), harness side.  A0004418 • Measure the resistance between the DDM C501a-4, circuit 5-EG13 (BU/BK), harness side and the interior AJB C283a-4, circuit 5-EG13 (BU/BK), harness side.  A0004421 • **Are the resistances less than 5 ohms?**	**Yes** GO to J4 . **No** REPAIR the circuit in question. TEST the system for normal operation.
J4 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE INTERIOR AJB C283D	

• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283a-8, component side.  • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283a-4, component side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to J5 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
J5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to J6 . **No** REPAIR the circuit in question. TEST the system for normal operation.
J6 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
J7 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test K: The Rear Electronic Module (REM) Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The REM communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG12 (GY/WH) and 5-EG12 (BU/OG). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-EG12 (GY/WH) and 5-EG12 (BU/OG) between the interior auxiliary junction box (AJB) C283b, interior AJB C283d or interior AJB C223 and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuits 4-EG12 (GY/WH) and 5-EG12 (BU/OG), damage to the DLC C251, damage to the REM 420b, or a problem in the interior AJB C283b, interior AJB C283d or joint connector No. 4 C223.

Possible Causes

- circuits 4-EG12 (GY/WH) and 5-EG12 (BU/OG) shorted to ground or open
- REM C420b
- interior AJB C283b
- interior AJB C283d
- joint connector No. 4 C223
- DLC C251
- REM

PINPOINT TEST K: THE REAR ELECTRONIC MODULE (REM) DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
K1 CHECK THE REM C420B FOR DAMAGE	
• Key in OFF position. • Disconnect: REM C420b. • Inspect the REM C420b for damage. • **Is the REM C420b OK?**	**Yes** GO to K2 . **No** REPAIR the REM C420b as necessary. TEST the system for normal operation.
K2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE REM C420B	
• Measure the resistance between the REM C420b-1, circuit 4-EG12 (GY/WH), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  • Measure the resistance between the REM C420b-2, circuit 5-EG12 (BU/OG), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to K7 . **No** GO to K3 .
K3 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283B AND THE REM C420B	
• Disconnect: Interior AJB C283b. • Measure the resistance between the REM C420b-1, circuit 4-EG12 (GY/WH), harness side and the interior AJB C283b-16, circuit 4-EG12 (GY/WH), harness side.	**Yes** GO to K4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 A0004424 • Measure the resistance between the REM C420b-2, circuit 5-EG12 (BU/OG), harness side and the interior AJB C283b-12, circuit 5-EG12 (BU/OG), harness side.  A0004427 • **Are the resistances less than 5 ohms?**	
K4 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-16, component side.  A0004425 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-12, component side.  A0004426 • **Are the resistances less than 5 ohms?**	**Yes** GO to K5 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
K5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.	**Yes** GO to K6 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.

 A0067841 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067842 • **Are the resistances less than 5 ohms?**	
K6 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
K7 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded

	connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test L: The Navigation System Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The navigation system module communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-EG17 (GY/BK) and 5-EG17 (BU/YE). If one of the SCP communications network become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-EG17 (GY/BK) and 5-EG17 (BU/YE) between the navigation system module C4209 and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-EG17 (GY/BK) and 5-EG17 (BU/YE), damage to the DLC C251, damage to the navigation system module C4209, or a problem in the interior auxiliary junction box (AJB) C283c, interior AJB C283d, joint connector No. 4 C223 or joint connector No. 5 C427.

Possible Causes

- circuits 4-EG17 (GY/BK) and 5-EG17 (BU/YE) shorted to ground or open
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- joint connector No. 5 C427
- DLC C251
- navigation system module C4209
- navigation system module

PINPOINT TEST L: THE NAVIGATION SYSTEM MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
L1 CHECK THE NAVIGATION SYSTEM MODULE C4209 FOR DAMAGE	
• Key in OFF position. • Disconnect: Navigation System Module C4209. • Inspect the navigation system module C4209 for damage. • **Is the navigation system module C4209 OK?**	**Yes** GO to L2 . **No** REPAIR the navigation system module C4209 as necessary. TEST the system for normal operation.
L2 CHECK FOR AN OPEN BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE NAVIGATION SYSTEM MODULE C4209	
• Measure the resistance between the navigation system module C4209-4, circuit 4-EG17 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to L9 . **No** GO to L3 .

 A0057786 • Measure the resistance between the navigation system module C4209-16, circuit 5-EG17 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0057787 • **Are the resistances less than 5 ohms?**	
L3 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 5 C427 AND THE NAVIGATION SYSTEM MODULE C4209	
• Disconnect: Joint Connector No. 5 C427. • Measure the resistance between the navigation system module C4209-4, circuit 4-EG17 (GY/BK), harness side and joint connector No. 5 C427-4, circuit 4-EG17 (GY/BK), harness side.  A0057788 • Measure the resistance between the navigation system module C4209-16, circuit 5-EG17 (BU/YE), harness side and joint connector No. 5 C427-15, circuit 5-EG17 (BU/YE), harness side.  A0057789 • **Are the resistances less than 5 ohms?**	**Yes** GO to L4 . **No** REPAIR the circuit in question. TEST the system for normal operation.
L4 CHECK JOINT CONNECTOR NO. 5 C427 FOR AN OPEN	

• Measure the resistance between joint connector No. 5 C427-1, component side and joint connector No. 5 C427-4, component side.  A0067843 • Measure the resistance between joint connector No. 5 C427-12, component side and joint connector No. 5 C427-15, component side.  A0067844 • **Are the resistances less than 5 ohms?**	**Yes** GO to L5 . **No** REPAIR joint connector No. 5 C427 as necessary. TEST the system for normal operation.
L5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283B AND JOINT CONNECTOR NO. 5 C427	
• Disconnect: Interior AJB C283b. • Measure the resistance between the interior AJB C283b-8, circuit 4-EG1 (GY/RD), harness side and joint connector No. 5 C427-1, circuit 4-EG1 (GY/RD), harness side.  A0067845 • Measure the resistance between the interior AJB C283b-4, circuit 5-EG1 (BU/RD), harness side and joint connector No. 5 C427-12, circuit 5-EG1 (BU/RD), harness side.  A0067846 • **Are the resistances less than 5 ohms?**	**Yes** GO to L6 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
L6 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	

• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-8, component side.  A0057792 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-4, component side.  A0067846 • **Are the resistances less than 5 ohms?**	**Yes** GO to L7 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
L7 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067847 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067848 • **Are the resistances less than 5 ohms?**	**Yes** GO to L8 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
L8 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
L9 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Section 419-07 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test M: The Driver Temperature Control Seat Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The driver temperature control seat module communicates with the diagnostic tool through the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit 4-HC21 (GY/OG). If circuit 4-HC21 (GY/OG) becomes open or shorted to ground, communications to that module is not possible. Check circuit 4-HC21 (GY/OG) between the temperature control seat module and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-HC21 (GY/OG), damage to the DLC C251, damage to the driver temperature control seat module C3031a, or a problem with in-line C213, in-line C315 or joint connector No. 1 C261.

Possible Causes

- circuit 4-HC21 (GY/OG) shorted to ground or open
- driver temperature control seat module C3031a
- joint connector No. 1 C261
- in-line C213
- in-line C315
- DLC C251
- driver temperature control seat module

PINPOINT TEST M: THE DRIVER TEMPERATURE CONTROL SEAT MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
M1 CHECK THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR DAMAGE	
• Key in OFF position. • Disconnect: Driver Temperature Control Seat Module C3031a. • Inspect the driver temperature control seat module C3031a for damage. • **Is the driver temperature control seat module C3031a OK?**	**Yes** GO to M2 . **No** REPAIR the driver temperature control seat module C3031a. CARRY OUT the diagnostic tool data link test.
M2 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN THE DLC C251 AND THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR AN OPEN	
• Measure the resistance between the driver temperature control seat module C3031a-1, circuit 4-HC21 (GY/OG), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  A0057798 • **Is the resistance less than 5 ohms?**	**Yes** GO to M9 . **No** GO to M3 .
M3 CHECK IN-LINE C315 FOR DAMAGE	
• Disconnect: In-Line C315. • Inspect in-line C315M and in-line C315F for damage. • **Are in-line C315M and in-line C315F OK?**	**Yes** GO to M4 . **No** REPAIR in-line C315M and in-line C315F. CARRY OUT the diagnostic tool data link test.
M4 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN IN-LINE C315F AND THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR AN OPEN	

• Measure the resistance between the driver temperature control seat module C3031a-1, circuit 4-HC21 (GY/OG), harness side and in-line C315F-10, circuit 4-HC21 (GY/OG), harness side.  A0057799 • **Is the resistance less than 5 ohms?**	**Yes** GO to M5 . **No** REPAIR the circuit between in-line C315F and the driver temperature control seat module C3031a. CARRY OUT the diagnostic tool data link test.
M5 CHECK IN-LINE C213 FOR DAMAGE	
• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to M6 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
M6 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN IN-LINE C315M AND IN-LINE C213F FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and in-line C315M-10, circuit 4-HC21 (GY/OG), harness side.  A0057800 • **Is the resistance less than 5 ohms?**	**Yes** GO to M7 . **No** REPAIR the circuit between in-line C315M and in-line C213F. CARRY OUT the diagnostic tool data link test.
M7 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213M AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between in-line C213M-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067849 • **Is the resistance less than 5 ohms?**	**Yes** GO to M8 . **No** REPAIR the circuit between in-line C213M and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
M8 CHECK JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	

• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
M9 CHECK FOR CORRECT DRIVER TEMPERATURE CONTROL SEAT MODULE OPERATION	

• Disconnect all the driver temperature control seat module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the driver temperature control seat module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new driver temperature control seat module. REFER to Section 501-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test N: The Passenger Temperature Control Seat Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The passenger temperature control seat module communicates with the diagnostic tool through the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit 4-HC22 (GY). If circuit 4-HC22 (GY) becomes open or shorted to ground, communications to that module is not possible. Check circuit 4-HC22 (GY) between the passenger temperature control seat module and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-HC22 (GY), damage to the DLC C251, damage to the passenger temperature control seat module C3031a, or a problem with in-line C213, in-line C313 or joint connector No. 1 C261.

Possible Causes

- circuit 4-HC22 (GY) shorted to ground or open
- passenger temperature control seat module C3036a
- joint connector No. 1 C261
- in-line C213
- in-line C313
- DLC C251
- passenger temperature control seat module

PINPOINT TEST N: THE PASSENGER TEMPERATURE CONTROL SEAT MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
N1 CHECK THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR DAMAGE	
• Key in OFF position. • Disconnect: Passenger Temperature Control Seat Module C3036a. • Inspect the passenger temperature control seat module C3036a for damage. • **Is the passenger temperature control seat module C3036a OK?**	**Yes** GO to N2 . **No** REPAIR the passenger temperature control seat module C3036a. CARRY OUT the diagnostic tool data link test.
N2 CHECK CIRCUIT 4-HC22 (GY) BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR AN OPEN	
• Measure the resistance between the passenger temperature control seat module C3036a-1, circuit 4-HC22 (GY), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  A0057798 • **Is the resistance less than 5 ohms?**	**Yes** GO to N9 . **No** GO to N3 .
N3 CHECK IN-LINE C313 FOR DAMAGE	
• Disconnect: In-Line C313. • Inspect in-line C313M and in-line C313F for damage. • **Are in-line C313M and in-line C313F OK?**	**Yes** GO to N4 . **No** REPAIR in-line C313M and in-line C313F. CARRY OUT the diagnostic tool data link test.
N4 CHECK CIRCUIT 4-HC22 (GY) BETWEEN IN-LINE C313F AND THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR AN OPEN	
• Measure the resistance between the passenger temperature control seat module C3036a-1, circuit 4-HC22 (GY), harness side and in-line C313F-10, circuit 4-HC22 (GY), harness side.	**Yes** GO to N5 . **No** REPAIR the circuit between in-line C313F and the passenger temperature control seat module C3036a. CARRY OUT the diagnostic tool data link test.

 A0057799 • **Is the resistance less than 5 ohms?**	
N5 CHECK IN-LINE C213 FOR DAMAGE	
• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to N6 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
N6 CHECK CIRCUIT 4-HC22 (GY) BETWEEN IN-LINE C313M AND IN-LINE C213F FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and in-line C313M-10, circuit 4-HC22 (GY), harness side.  A0057803 • **Is the resistance less than 5 ohms?**	**Yes** GO to N7 . **No** REPAIR the circuit between in-line C313M and in-line C213F. CARRY OUT the diagnostic tool data link test.
N7 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213F AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067863 • **Is the resistance less than 5 ohms?**	**Yes** GO to N8 . **No** REPAIR the circuit between in-line C213F and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
N8 CHECK FOR AN OPEN AT JOINT CONNECTOR NO. 1 C261	
• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test.

 A0067850 • **Is the resistance less than 5 ohms?**	**No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
N9 CHECK FOR CORRECT PASSENGER TEMPERATURE CONTROL SEAT MODULE OPERATION	

• Disconnect all the passenger temperature control seat module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the passenger temperature control seat module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new passenger temperature control seat module. REFER to Section 501-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test O: No Standard Corporate Protocol (SCP) Communications Network Communication

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The anti-lock brake system/traction control (ABS/TC) module, dual automatic temperature control (DATC) module, audio control module (ACM), rear electronic module (REM), front electronic module (FEM), electronic parking brake module, driver seat module (DSM), driver door module (DDM), navigation system module, and the instrument cluster communicate with the diagnostic tool through the SCP communications network circuits. The powertrain control module (PCM) communicates with all modules on the SCP communications network. If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. If a module is lost due to internal concerns, communications can continue to all other modules. Check the SCP communications network circuits between the PCM C175b, ACM C290c, ABS/TC module C155, DATC module C228a, instrument cluster C220b, navigation system module C4209, electronic parking brake module C4205b, DDM C501a, DSM C341c, FEM C201c, REM C420b, and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms there is an open in one or both SCP communications network circuits, damage to the PCM C175b, ACM C290c, ABS/TC module C155, DATC module C228a, instrument cluster C220b, navigation system module C4209, electronic parking brake module C4205b, DDM C501a, DSM C341c, FEM C201c, REM C420b, in-line C315, interior auxiliary junction box (AJB) C283a, interior AJB C283b, interior AJB C283c, interior AJB C283d, joint connector No. 4 C223, joint connector No. 5 C427 and the DLC C251. If, after individual checks of each circuit leading to a module show resistance values less than 5 ohms and no in-line connector issues present, the diagnostic tool data link test must be run with the module in question disconnected. If the data links diagnostics test passes with the module in question disconnected, the module is the source of the concern and should be removed and a new module installed.

Possible Causes

- SCP communications network circuits
- interior AJB C283a
- interior AJB C283b
- interior AJB C283c
- interior AJB C283d
- joint connector No. 4 C223
- joint connector No. 5 C427
- in-line C315
- DLC C251
- ABS/TC module
- PCM
- DATC module
- ACM
- FEM
- REM
- DSM
- DDM
- instrument cluster
- navigation system module
- electronic parking brake module

PINPOINT TEST O: NO STANDARD CORPORATE PROTOCOL (SCP) COMMUNICATIONS NETWORK COMMUNICATION

Test Step	Result / Action to Take
O1 CHECK THE DATA LINK CONNECTOR (DLC) C251 FOR DAMAGE	
• Key in OFF position. • Inspect the DLC C251 for damage. • **Is the DLC C251 OK?**	**Yes** GO to O2 . **No** REPAIR the DLC C251. CARRY OUT the diagnostic tool data link test.
O2 CHECK THE PCM C175B FOR DAMAGE	
• Key in OFF position. • Disconnect: PCM C175b. • Inspect the PCM C175b for damage. • **Is the PCM C175b OK?**	**Yes** GO to O3 . **No** REPAIR the PCM C175b as necessary. TEST the system for normal operation.
O3 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE PCM C175B	
• Measure the resistance between the PCM C175b-3, circuit 4-RE8 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to O8 . **No** GO to O4 .

 N0002823 • Measure the resistance between the PCM C175b-4, circuit 5-RE8 (BU), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  N0002826 • **Are the resistances less than 5 ohms?**	
O4 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283C AND THE PCM C175B	
• Disconnect: Interior AJB C283c. • Measure the resistance between the PCM C175b-3, circuit 4-RE8 (GY), harness side and the interior AJB C283c-4, circuit 4-RE8 (GY), harness side.  N0002831 • Measure the resistance between the PCM C175b-4, circuit 5-RE8 (BU), harness side and the interior AJB C283c-1, circuit 5-RE8 (BU), harness side.  N0002832 • **Are the resistances less than 5 ohms?**	**Yes** GO to O5 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283c-4, component side.	**Yes** GO to O6 . **No** INSTALL a new interior AJB. TEST the system for normal operation.

 A0004379 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283c-1, component side.  A0004382 • **Are the resistances less than 5 ohms?**	
O6 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067847 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067848 • **Are the resistances less than 5 ohms?**	**Yes** GO to O7 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O7 CHECK FOR AN OPEN AT JOINT CONNECTOR NO. 4 C223	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No**

 A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O8 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE PCM C175B DISCONNECTED	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O77 . **No** GO to O9 .
O9 CHECK THE ANTI-LOCK BRAKE SYSTEM/TRACTION CONTROL (ABS/TC) MODULE FOR DAMAGE	
• Key in OFF position. • Connect: PCM C175b. • Connect: Interior AJB C283c. • Connect: Interior AJB C283d. • Connect: Joint Connector No. 4 C223. • Disconnect: ABS/TC module C155. • Inspect the ABS/TC module C155 for damage. • **Is the ABS/TC module C155 OK?**	**Yes** GO to O10 . **No** REPAIR the ABS/TC module C155 as necessary. TEST the system for normal operation.
O10 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE ABS/TC MODULE C155	
• Measure the resistance between the ABS/TC module C155-12, circuit 4-CF6 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0067783 • Measure the resistance between the ABS/TC module C155-14, circuit 5-CF6 (BU), harness side and the C251-10, circuit 5-EG7 (BU/RD), harness side.	**Yes** GO to O15 . **No** GO to O11 .

 A0067784 • **Are the resistances less than 5 ohms?**	
O11 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE ABS/TC MODULE C155	
• Disconnect: Interior AJB C283c. • Measure the resistance between the ABS/TC module C155-12, circuit 4-CF6 (GY), harness side and the interior AJB C283c-5, circuit 4-CF6 (GY), harness side.  A0067785 • Measure the resistance between the ABS/TC module C155-14, circuit 5-CF6 (BU), harness side and the interior AJB C283c-6, circuit 5-CF6 (BU), harness side.  A0067786 • **Are the resistances less than 5 ohms?**	**Yes** GO to O12 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O12 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, and the interior AJB C283c-5, component side.  A0004355 • Measure the resistance between the interior AJB C283d-12, and the interior AJB 283c-6, component side.	**Yes** GO to O13 . **No** INSTALL a new interior AJB. TEST the system for normal operation.

 A0004360 • **Are the resistances less than 5 ohms?**	
O13 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067847 • Measure the resistance between the interior C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-22, circuit 5-EG1 (BU/RD), harness side.  A0067848 • **Are the resistances less than 5 ohms?**	**Yes** GO to O14 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O14 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.

 A0004362 • **Are the resistances less than 5 ohms?**	
O15 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE ABS/TC MODULE C155 DISCONNECTED	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O78 . **No** GO to O16 .
O16 CHECK THE DUEL AUTOMATIC TEMPERATURE CONTROL (DATC) MODULE C228A FOR DAMAGE	
• Key in OFF position. • Connect: ABS/TC Module C155. • Connect: Interior AJB C283c. • Connect: Interior AJB C283d. • Connect: Joint Connector No. 4 C223. • Disconnect: DATC Module C228a. • Inspect the DATC module C228a for damage. • **Is the DATC module C228a OK?**	**Yes** GO to O17 . **No** REPAIR the DATC module C228a as necessary. TEST the system for normal operation.
O17 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE DATC MODULE C228A	
• Measure the resistance between the DATC module C228a-12, circuit 4-FA10 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004383 • Measure the resistance between the DATC module C228a-1, circuit 5-FA10 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004386	**Yes** GO to O20 **No** GO to O18 .

• **Are the resistances less than 5 ohms?**	
O18 CHECK FOR AN OPEN BETWEEN THE DATC MODULE C228A AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the DATC module C228a-12, circuit 4-FA10 (GY/BK), harness side and joint connector No. 4 C223-15, circuit 4-FA10 (GY/BK), harness side.  A0067813 • Measure the resistance between the DATC module C228a-1, circuit 5-FA10 (BU/YE), harness side and joint connector No. 4 C223-8, circuit 5-FA10 (BU/YE), harness side.  A0067814 • **Are the resistances less than 5 ohms?**	**Yes** GO to O19 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O19 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN (COMPONENT SIDE)	
• Measure the resistance between joint connector No. 4 C223-14, component side and joint connector No. 4 223-15, component side.  A0004385 • Measure the resistance between joint connector No. 4 C223-8, component side and joint connector No. 4 C223-9, component side.  A0004388 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.

O20 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE DATC MODULE C228B DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O79 . **No** GO to O21 .
O21 CHECK THE INSTRUMENT CLUSTER C220B FOR DAMAGE	
• Key in OFF position. • Connect: DATC Module C228a. • Connect: Joint Connector No. 4 C223. • Disconnect: Instrument Cluster C220b. • Inspect the instrument cluster C220b for damage. • **Is the instrument cluster C220b OK?**	**Yes** GO to O22 . **No** REPAIR the instrument cluster C220b as necessary. TEST the system for normal operation.
O22 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE INSTRUMENT CLUSTER C220B	
• Measure the resistance between the instrument cluster C220b-15, circuit 4-EG8 (GY/VT), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004371 • Measure the resistance between the instrument cluster C220b-16, circuit 5-EG8 (BU/WH), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004374 • **Is the resistance less than 5 ohms?**	**Yes** GO to O25 . **No** GO to O23 .
O23 CHECK FOR AN OPEN BETWEEN THE INSTRUMENT CLUSTER C220B AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the instrument cluster C220b-15, circuit 4-EG8 (GY/VT), harness side and joint connector No. 4 C223-13, circuit 4-EG8 (GY/VT), harness side.	**Yes** GO to O24 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 A0004372 • Measure the resistance between the instrument cluster C220b-16, circuit 5-EG8 (BU/WH), harness side and joint connector No. 4 C223-10, circuit 5-EG8 (BU/WH), harness side.  A0067810 • **Is the resistance less than 5 ohms?**	
O24 CHECK FOR AN OPEN AT JOINT CONNECTOR NO. 4 (COMPONENT SIDE)	
• Measure the resistance between joint connector No. 4 C223-13, component side and joint connector No. 4 C223-14, component side.  A0004373 • Measure the resistance between joint connector No. 4 C223-10, component side and joint connector No. 4 C223-9, component side.  A0004376 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. TEST the system for normal operation. **No** REPAIR joint connector No. 4 C223 as necessary. TEST the system for normal operation.
O25 CHECK SCP COMMUNICATIONS NETWORK WITH THE INSTRUMENT CLUSTER C220B DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O80 . **No** GO to O26 .
O26 CHECK THE NAVIGATION SYSTEM MODULE C4209 FOR DAMAGE	

• Key in OFF position. • Connect: Instrument Cluster C220b. • Connect: Joint Connector No. 4 C223. • Disconnect: Navigation System Module C4209. • Inspect the navigation system module C4209 for damage. • **Is the navigation system module C4209 OK?**	**Yes** GO to O27 . **No** REPAIR the navigation system module C4209 as necessary. TEST the system for normal operation.
O27 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE NAVIGATION SYSTEM MODULE C4209	
• Measure the resistance between the navigation system module C4209-4, circuit 4-EG17 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0057786 • Measure the resistance between the navigation system module C4209-16, circuit 5-EG17 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0057787 • **Are the resistances less than 5 ohms?**	**Yes** GO to O34 . **No** GO to O28 .
O28 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 5 C427 AND THE NAVIGATION SYSTEM MODULE C4209	
• Disconnect: Joint Connector No. 5 C427. • Measure the resistance between the navigation system module C4209-4, circuit 4-EG17 (GY/BK), harness side and joint connector No. 5 C427-4, circuit 4-EG17 (GY/BK), harness side.  A0067864 • Measure the resistance between the navigation system module C4209-16, circuit 5-EG17 (BU/YE), harness side and joint connector No. 5 C427-15,	**Yes** GO to O29 . **No** REPAIR the circuit in question. TEST the system for normal operation.

circuit 5-EG17 (BU/YE), harness side.  A0067865 • **Are the resistances less than 5 ohms?**	
O29 CHECK JOINT CONNECTOR NO. 5 C427 FOR AN OPEN	
• Measure the resistance between joint connector No. 5 C427-1, component side and joint connector No. 5 C427-4, component side.  A0067843 • Measure the resistance between joint connector No. 5 C427-12, component side and joint connector No. 5 C427-15, component side.  A0067844 • **Are the resistances less than 5 ohms?**	**Yes** GO to O30 . **No** REPAIR joint connector No. 5 C427 as necessary. TEST the system for normal operation.
O30 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND JOINT CONNECTOR NO. 5 C427	
• Disconnect: Interior AJB C283b. • Measure the resistance between the interior AJB C283b-8, circuit 4-EG1 (GY/RD), harness side and joint connector No. 5 C427-1, circuit 4-EG1 (GY/RD), harness side.  A0067845 • Measure the resistance between the interior AJB C283b-4, circuit 5-EG1 (BU/RD), harness side and joint connector No. 5 C427-12, circuit 5-EG1	**Yes** GO to O31 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.

(BU/RD), harness side.  A0067846 • **Are the resistances less than 5 ohms?**	
O31 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-8, component side.  A0057792 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-4, component side.  A0057793 • **Are the resistances less than 5 ohms?**	**Yes** GO to O32 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
O32 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067847 • Measure the resistance between the interior AJB	**Yes** GO to O33 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.

C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067848 • **Are the resistances less than 5 ohms?**	
O33 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O34 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE NAVIGATION SYSTEM MODULE C4209 DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O81 . **No** GO to O35 .
O35 CHECK THE AUDIO CONTROL MODULE (ACM) C290C FOR DAMAGE	
• Key in OFF position. • Connect: Navigation System Module C4209. • Connect: Interior AJB C283b. • Connect: Interior AJB C283d. • Connect: Joint Connector No. 5 C427. • Connect: Joint Connector No. 4 C223.	**Yes** GO to O36 . **No** REPAIR the ACM C290c as necessary. TEST the system for normal operation.

• Disconnect: ACM C290c. • Inspect ACM C290c for damage. • **Is the ACM C290c OK?**	
O36 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE ACM C290C	
• Measure the resistance between the ACM C290c-1, circuit 4-EG10 (GY/BK), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  N0002827 • Measure the resistance between the ACM C290c-4, circuit 5-EG10 (BU/YE), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  N0002828 • **Are the resistances less than 5 ohms?**	**Yes** GO to O39 . **No** GO to O37 .
O37 CHECK FOR AN OPEN BETWEEN THE ACM AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the ACM C290c-1 circuit 4-EG10 (GY/BK), harness side and joint connector No. 4 C223-16, circuit 4-EG10 (GY/BK), harness side.  N0002829 • Measure the resistance between the ACM C290c-4 circuit 5-EG10 (BU/YE) DM100i only, harness side and joint connector No. 4 C223-7, circuit 5-EG10 (BU/YE), harness side.	**Yes** GO to O38 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 N0002830 • **Are the resistances less than 5 ohms?**	
O38 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-16, component side and joint connector No. 4 C223-14, component side.  A0004391 • Measure the resistance between joint connector No. 4 C223-7, component side and joint connector No. 4 C223-9, component side.  A0004394 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O39 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE ACM C290C DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O82 . **No** GO to O40 .
O40 CHECK THE REM C420B FOR DAMAGE	
• Key in OFF position. • Connect: ACM C290c. • Connect: Joint Connector No. 4 C223. • Disconnect: REM C420b. • Inspect the REM C420b for damage. • **Is the REM C420b OK?**	**Yes** GO to O41 . **No** REPAIR the REM C420b as necessary. TEST the system for normal operation.
O41 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE REM C420B	

• Measure the resistance between the REM C420b-1, circuit 4-EG12 (GY/WH), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004423 • Measure the resistance between the REM C420b-2, circuit 5-EG12 (BU/OG), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004426 • **Are the resistances less than 5 ohms?**	**Yes** GO to O46 . **No** GO to O42 .
O42 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE REM C420B	
• Disconnect: Interior AJB C283b. • Measure the resistance between the REM C420b-1, circuit 4-EG12 (GY/WH), harness side and the interior AJB C283b-16, circuit 4-EG11 (GY), harness side.  A0004424 • Measure the resistance between the REM C420b-2, circuit 5-EG12 (BU/OG), harness side and the interior AJB C283b-12, circuit 5-EG11 (BU), harness side.  A0004427 • **Are the resistances less than 5 ohms?**	**Yes** GO to O43 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O43 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	

• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-16, component side.  • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-12, component side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to O44 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
O44 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between interior the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to O45 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O45 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O46 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE REM C420B DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O83 . **No** GO to O47 .
O47 CHECK THE FEM C201C FOR DAMAGE	
• Key in OFF position. • Connect: REM C420b. • Connect: Interior AJB C283b. • Connect: Interior AJB C283d. • Connect: Joint Connector No. 4 C223. • Disconnect: FEM C201c. • Inspect the FEM C201c for damage; repair as necessary. • **Is the FEM C201c OK?**	**Yes** GO to O48 . **No** REPAIR the FEM C201c as necessary. TEST the system for normal operation.
O48 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE FEM C201C	
• Measure the resistance between the FEM C201c-7, circuit 4-EG11 (GY), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to O53 . **No** GO to O49 .

 A0004363 • Measure the resistance between the FEM C201c-1, circuit 5-EG11 (BU), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004366 • **Is the resistance less than 5 ohms?**	
O49 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE FEM C201C	
• Disconnect: Interior AJB C283c. • Measure the resistance between the FEM C201c-7, circuit 4-EG11 (GY), harness side and the interior AJB C283c-10, circuit 4-EG11 (GY), harness side.  A0004364 • Measure the resistance between the FEM C201c-1, circuit 5-EG11 (BU), harness side and the interior AJB C283c-8, circuit 5-EG11 (BU), harness side.  A0004367 • **Is the resistance less than 5 ohms?**	**Yes** GO to O50 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O50 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283C AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283c-10, component side.	**Yes** GO to O51 . **No** INSTALL a new interior AJB. TEST the system for normal operation.

 A0004365 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283c-8, component side.  A0004368 • **Are the resistances less than 5 ohms?**	
O51 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-11, circuit 4-EG1 (GY/RD), harness side.  A0067841 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-12, circuit 5-EG1 (BU/RD), harness side.  A0067842 • **Are the resistances less than 5 ohms?**	**Yes** GO to O52 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O52 CHECK JOINT CONNECTOR NO. 4 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No**

 A0004357 • Measure the resistance between joint connector No. 4 C223-11, component side and joint connector No. 4 C223-9, component side.  A0004362 • **Are the resistances less than 5 ohms?**	REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O53 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE FEM C201C DISCONNECTED	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O84 . **No** GO to O54 .
O54 CHECK THE ELECTRONIC PARKING BRAKE MODULE C4205B FOR DAMAGE	
• Key in OFF position. • Disconnect: FEM C201c. • Connect: Interior AJB C283c. • Connect: Interior AJB C283d. • Connect: Joint Connector No. 4 C223. • Disconnect: Electronic Parking Brake Module C4205b. • Inspect the electronic parking brake module C4205b for damage. • **Is the electronic parking brake module C4205b OK?**	**Yes** GO to O55 . **No** REPAIR the electronic parking brake module C4205b as necessary. TEST the system for normal operation.
O55 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE ELECTRONIC PARKING BRAKE MODULE C4205B	
• Measure the resistance between the electronic parking brake module C4205b-1, circuit 4-CG16 (GY/RD), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to O62 . **No** GO to O56 .

 A0057805 • Measure the resistance between the electronic parking brake module C4205b-7, circuit 5-CG16 (BU/RD), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0057810 • **Are the resistances less than 5 ohms?**	
O56 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 5 C427 AND THE ELECTRONIC PARKING BRAKE MODULE C4205B	
• Disconnect: Joint Connector No. 5 C427. • Measure the resistance between the electronic parking brake module C4205b-1, circuit 4-CG16 (GY/RD), harness side and joint connector No. 5 C427-2, circuit 4-CG16 (GY/RD), harness side.  A0067866 • Measure the resistance between the electronic parking brake module C4205b-7, circuit 5-CG16 (BU/RD), harness side and joint connector No. 5 C427-13, circuit 5-CG16 (BU/RD), harness side.  A0067867 • **Are the resistances less than 5 ohms?**	**Yes** GO to O57 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O57 CHECK JOINT CONNECTOR NO. 5 C427 FOR AN OPEN	
• Measure the resistance between joint connector No. 5 C427-1, component side and joint connector No. 5 C427-2, component side.	**Yes** GO to O58 . **No** REPAIR joint connector No. 5 C427 as

 A0067868 • Measure the resistance between joint connector No. 5 C427-12, component side and joint connector No. 5 C427-13, component side.  A0067869 • **Are the resistances less than 5 ohms?**	necessary. TEST the system for normal operation.
O58 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND JOINT CONNECTOR NO. 5 C427	
• Disconnect: Interior AJB C283b. • Measure the resistance between the interior AJB C283b-8, circuit 4-EG1 (GY/RD), harness side and joint connector No. 5 C427-1, circuit 4-EG1 (GY/RD), harness side.  A0067870 • Measure the resistance between the interior AJB C283b-4, circuit 5-EG1 (BU/RD), harness side and joint connector No. 5 C427-12, circuit 5-EG1 (BU/RD), harness side.  A0067871 • **Are the resistances less than 5 ohms?**	**Yes** GO to O59 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O59 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	

• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-8, component side.  A0057792 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-4, component side.  A0057793 • **Are the resistances less than 5 ohms?**	**Yes** GO to O60 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
O60 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067872 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067887 • **Are the resistances less than 5 ohms?**	**Yes** GO to O61 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O61 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O62 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE ELECTRONIC PARKING BRAKE C4205B DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O85 . **No** GO to O63 .
O63 CHECK THE DRIVER SEAT MODULE (DSM) C341C FOR DAMAGE	
• Key in OFF position. • Connect: Electronic Parking Brake Module C4205b. • Connect: Interior AJB C283b. • Connect: Interior AJB C283c. • Connect: Joint Connector No. 4 C223. • Connect: Joint Connector No. 5 C427. • Disconnect: DSM C241c. • Inspect the DSM C341c for damage. • **Is the DSM C341c OK?**	**Yes** GO to O64 . **No** REPAIR the DSM C341c as necessary. TEST the system for normal operation.
O64 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE DSM 341C	
• Measure the resistance between the DSM C341c-1, circuit 4-AH80 (GY/WH), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to O69 . **No** GO to O65 .

 A0004409 • Measure the resistance between the DSM C341c-9, circuit 5-AH80 (BU/OG), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0004413 • **Are the resistances less than 5 ohms?**	
O65 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE DSM 341C	
• Disconnect: Interior AJB C283a. • Measure the resistance between the DSM C341c-1, circuit 4-AH80 (GY/WH), harness side and the interior AJB C283a-16, circuit 4-AH80 (GY/WH), harness side.  A0067951 • Measure the resistance between the DSM C341c-9, circuit 5-AH80 (BU/OG), harness side and the interior AJB C283a-12, circuit 5-AH80 (BU/OG), harness side.  A0004414 • **Are the resistances less than 5 ohms?**	**Yes** GO to O66 . **No** Repair the circuit in question. TEST the system for normal operation.
O66 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283a-16, component side and the interior AJB C283d-16, component side.	**Yes** GO to O67 . **No** INSTALL a new interior AJB. TEST the system for normal operation.

 A0004412 • Measure the resistance between the interior AJB C283a-12, component side and the interior AJB C283d-12, component side.  A0004416 • **Are the resistances less than 5 ohms?**	
O67 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067811 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067812 • **Are the resistances less than 5 ohms?**	**Yes** GO to O68 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
O68 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test.

 A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
O69 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE DSM C341C DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O86 . **No** GO to O70 .
O70 CHECK THE DDM C501A FOR DAMAGE	
• Key in OFF position. • Connect: DSM C341c. • Connect: In-Line C315. • Connect: Interior AJB C283a. • Connect: Interior AJB C283c. • Connect: Joint Connector No. 4 C223. • Disconnect: DDM C501a. • Inspect the DDM C501a for damage. • **Is the DDM C501a OK?**	**Yes** GO to O71 . **No** REPAIR the DDM C501a as necessary. TEST the system for normal operation.
O71 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE DDM C501A	
• Measure the resistance between the DDM C501a-3, circuit 4-EG13 (GY/OG), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.  A0004417 • Measure the resistance between the DDM C501a-4, circuit 5-EG13 (BU/BK), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.	**Yes** GO to O76 . **No** GO to O72 .

 A0004420 • **Are the resistances less than 5 ohms?**	
O72 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE DDM C501A	
• Disconnect: Interior AJB C283a. • Measure the resistance between the DDM C501a-3, circuit 4-EG13 (GY/OG), harness side and the interior AJB C283a-8, circuit 4-EG13 (GY/OG), harness side.  A0004418 • Measure the resistance between the DDM C501a-4, circuit 5-EG13 (BU/BK), harness side and the interior AJB C283a-4, circuit 5-EG13 (BU/BK), harness side.  A0004421 • **Are the resistances less than 5 ohms?**	**Yes** GO to O73 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O73 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283A AND THE INTERIOR AJB C283D	
• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283a-8, component side.  A0004419 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283a-4, component side.	**Yes** GO to O74 . **No** INSTALL a new interior AJB. TEST the system for normal operation.

 A0004422 • **Are the resistances less than 5 ohms?**	
O74 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067811 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067812 • **Are the resistances less than 5 ohms?**	**Yes** GO to O75 . **No** REPAIR the circuit in question. TEST the system for normal operation.
O75 CHECK JOINT CONNECTOR NO. 4 C223 FOR AN OPEN	
• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	
O76 CHECK THE SCP COMMUNICATIONS NETWORK WITH THE DDM C501A DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to O87 . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
O77 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the PCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

O78 CHECK FOR CORRECT ABS/TC MODULE OPERATION	

• Disconnect all the ABS/TC module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the ABS/TC module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new ABS/TC module. REFER to Section 206-09 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

O79 CHECK FOR CORRECT DATC MODULE OPERATION	
• Disconnect all the DATC module connectors. • Check for:	**Yes** INSTALL a new DATC module. REFER to Section 412-04 . TEST the system for

• corrosion • push-out pins • Connect all the DATC module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	normal operation. CARRY OUT the diagnostic tool data link test. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
O80 CHECK FOR CORRECT INSTRUMENT CLUSTER OPERATION	
• Disconnect all the instrument cluster connectors. • Check for: • corrosion • push-out pins • Connect all the instrument cluster connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. CARRY OUT the diagnostic tool data link test. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
O81 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	
• Disconnect all the navigation system module connectors. • Check for: • corrosion • push-out pins • Connect all the navigation system module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new navigation system module. REFER to Section 419-07 . TEST the system for normal operation. CARRY OUT the diagnostic tool data link test. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
O82 CHECK FOR CORRECT ACM OPERATION	
• Disconnect all the ACM connectors. • Check for: • corrosion • push-out pins • Connect all the ACM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new ACM. REFER to Section 415-01 . TEST the system for normal operation. CARRY OUT the diagnostic tool data link test. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR

	the DTCs. REPEAT the self-test.
O83 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

O84 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

O85 CHECK FOR CORRECT ELECTRONIC PARKING BRAKE MODULE OPERATION	

• Disconnect all the electronic parking brake module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the electric parking brake module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new electronic parking brake module. REFER to Section 206-05 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

O86 CHECK FOR CORRECT DSM OPERATION	

• Disconnect all the DSM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the DSM connectors and make sure they seat correctly.
	Yes
	INSTALL a new DSM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.

• Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
O87 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test P: No International Standards Organization (ISO) 9141 Communications Network Communication

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The restraints control module (RCM) communicates with the diagnostic tool through the ISO 9141 communications network circuit 4-EE1 (GY/RD). If circuit 4-EE1 (GY/RD) becomes open or shorted to ground, communications to that module are not possible. Check circuit 4-EE1 (GY/RD) between the RCM C310a and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-EE1 (GY/RD), damage to the DLC C251, in-line C212 or damage to the RCM C310a.

Possible Causes

- circuit 4-EE1 (GY/RD) shorted to ground or open
- in-line C212
- RCM C310a
- DLC C251
- RCM

PINPOINT TEST P: NO INTERNATIONAL STANDARDS ORGANIZATION (ISO) 9141 COMMUNICATIONS NETWORK COMMUNICATION

Test Step	Result / Action to Take
P1 CHECK THE DATA LINK CONNECTOR (DLC) C251 FOR DAMAGE	
• Key in OFF position. • Inspect the DLC C251.	**Yes** GO to P2 .

• **Is the DLC C251 OK?**	**No** REPAIR the DLC C251. CARRY OUT the diagnostic tool data link test.
P2 CHECK THE RESTRAINTS CONTROL MODULE (RCM) C310A FOR DAMAGE	
• Deactivate the air bag system. Refer to Section 501-20B . • Disconnect: RCM C310a. • Inspect the RCM C310a for damage. • **Is the RCM C310a OK?**	**Yes** GO to P3 . **No** REPAIR the RCM C310a as necessary. TEST the system for normal operation.
P3 CHECK FOR AN OPEN CIRCUIT BETWEEN THE RCM C310A AND THE DLC C251	
• Measure the resistance between the DLC C251-7, circuit 4-EE10 (GY/BK), harness side and the RCM C310a-11, circuit 4-EE1 (GY/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to P5 . **No** GO to P4 .
P4 CHECK FOR AN OPEN CIRCUIT BETWEEN DLC C251 AND IN-LINE C212M	
• Disconnect: In-Line C212. • Measure the resistance between the DLC C251-7, circuit 4-EE10 (GY/BK), harness side and in-line C212M-8, circuit 4-EE10 (GY/BK), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between the RCM C310a and in-line C212F. TEST the system for normal operation. **No** REPAIR the circuit between the DLC C251 and in-line C212M. TEST the system for normal operation.
P5 CHECK THE ISO 9141 COMMUNICATIONS NETWORK WITH THE RCM C310A DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to P6 . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

	REPEAT the self-test.
P6 CHECK FOR CORRECT RCM OPERATION	

• Disconnect all the RCM connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the RCM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new RCM. REFER to Section 501-20B . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test Q: No Universal Asynchronous Receiver-Transmitter (UART)-Based Protocol (UBP) Communications Network Communication

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The driver climate control seat module, passenger climate control seat module, and parking aid module communicate with the diagnostic tool through the UBP communications network circuit 4-ED6 (OG). If circuit 4-ED6 (OG) becomes open or shorted to ground, communications to that module are not possible. Check circuit 4-ED6 (OG) between the driver climate control seat module, passenger climate control seat module, parking aid module, and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-ED6 (OG), damage to the DLC C251 or damage to the driver or passenger climate control seat module, parking aid module, or a problem with in-line C213, in-line C313, in-line C315 or joint connector No. 1 C261. If, after individual checks of each circuit leading to a module show resistance values less than 5 ohms and no in-line connector issues are present, the data link diagnostics test must be run with the module in question disconnected. If the data links diagnostics test passes with the module in question disconnected, it is the source of the concern and should be removed and a new module installed.

Possible Causes

- DLC C251
- diagnostic tool
- in-line C213
- in-line C313
- in-line C315
- joint connector No. 1 C261
- 4-ED6 (OG)
- driver climate control seat module
- passenger climate control seat module
- parking aid module

PINPOINT TEST Q: NO UNIVERSAL ASYNCHRONOUS RECEIVER-TRANSMITTER (UART)-BASED PROTOCOL (UBP) COMMUNICATIONS NETWORK COMMUNICATION

Test Step	Result / Action to Take

Q1 CHECK THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR DAMAGE	
• Key in OFF position. • Disconnect: Driver Temperature Control Seat Module C3031a. • Inspect the driver temperature control seat module C3031a for damage. • **Is the driver temperature control seat module C3031a OK?**	**Yes** GO to Q2 . **No** REPAIR the driver temperature control seat module C3031a. CARRY OUT the diagnostic tool data link test.
Q2 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR AN OPEN	
• Measure the resistance between the driver temperature control seat module C3031a-1, circuit 4-HC21 (GY/OG), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  A0057798 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q9 . **No** GO to Q3 .
Q3 CHECK IN-LINE C315 FOR DAMAGE	
• Disconnect: In-Line C315. • Inspect in-line C315M and in-line C315F for damage. • **Are in-line C315M and in-line C315F OK?**	**Yes** GO to Q4 . **No** REPAIR in-line C315M and in-line C315F. CARRY OUT the diagnostic tool data link test.
Q4 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN IN-LINE C315F AND THE DRIVER TEMPERATURE CONTROL SEAT MODULE C3031A FOR AN OPEN	
• Measure the resistance between the driver temperature control seat module C3031a-1, circuit 4-HC21 (GY/OG), harness side and in-line C315F-10, circuit 4-HC21 (GY/OG), harness side.  A0057799 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q5 . **No** REPAIR the circuit between in-line C315F and the driver temperature control seat module C3031a. CARRY OUT the diagnostic tool data link test.
Q5 CHECK IN-LINE C213 FOR DAMAGE	

• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to Q6 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q6 CHECK CIRCUIT 4-HC21 (GY/OG) BETWEEN IN-LINE C315M AND IN-LINE C213F FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and in-line C315M-10, circuit 4-HC21 (GY/OG), harness side.  A0057800 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q7 . **No** REPAIR the circuit between in-line C315M and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q7 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213M AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between in-line C213M-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067849 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q8 . **No** REPAIR the circuit between in-line C213M and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
Q8 CHECK JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.  A0067850 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
Q9 CHECK THE UBP COMMUNICATIONS NETWORK WITH THE DRIVER CLIMATE CONTROL SEAT MODULE	

DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to Q26 . **No** GO to Q10 .
Q10 CHECK THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR DAMAGE	
• Key in OFF position. • Connect: Driver Climate Control Seat Module C3031a. • Connect: In-Line C315. • Connect: In-Line C213. • Connect: Joint Connector No. 1 C261. • Disconnect: Passenger Temperature Control Seat Module C3036a. • Inspect the passenger temperature control seat module C3036a for damage. • **Is the passenger temperature control seat module C3036a OK?**	**Yes** GO to Q11 . **No** REPAIR the passenger temperature control seat module C3036a. CARRY OUT the diagnostic tool data link test.
Q11 CHECK CIRCUIT 4-HC22 (GY) BETWEEN THE DLC C251 AND THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR AN OPEN	
• Measure the resistance between the passenger temperature control seat module C3036a-1, circuit 4-HC22 (GY), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to Q18 . **No** GO to Q12 .
Q12 CHECK IN-LINE C313 FOR DAMAGE	
• Disconnect: In-Line C313. • Inspect in-line C313M and in-line C313F for damage. • **Are in-line C313M and in-line C313F OK?**	**Yes** GO to Q13 . **No** REPAIR in-line C313M and in-line C313F. CARRY OUT the diagnostic tool data link test.
Q13 CHECK CIRCUIT 4-HC22 (GY) BETWEEN IN-LINE C313F AND THE PASSENGER TEMPERATURE CONTROL SEAT MODULE C3036A FOR AN OPEN	
• Measure the resistance between the passenger temperature control seat module C3036a-1, circuit 4-HC22 (GY), harness side and in-line C313F-10, circuit 4-HC22 (GY), harness side.	**Yes** GO to Q14 . **No** REPAIR the circuit between in-line

 A0057799 • **Is the resistance less than 5 ohms?**	C313F and the passenger temperature control seat module C3036a. CARRY OUT the diagnostic tool data link test.
Q14 CHECK IN-LINE C213 FOR DAMAGE	
• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to Q15 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q15 CHECK CIRCUIT 4-HC22 (GY) BETWEEN IN-LINE C313M AND IN-LINE C213F FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and in-line C313M-10, circuit 4-HC22 (GY), harness side.  A0057803 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q16 . **No** REPAIR the circuit between in-line C313M and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q16 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213F AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067863 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q17 . **No** REPAIR the circuit between in-line C213F and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
Q17 CHECK JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test.

 A0067850 • **Is the resistance less than 5 ohms?**	**No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
Q18 CHECK THE UBP COMMUNICATIONS NETWORK WITH THE PASSENGER CLIMATE CONTROL SEAT MODULE DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to Q27 . **No** GO to Q19 .
Q19 CHECK THE PARKING AID MODULE C4014B FOR DAMAGE	
• Key in OFF position. • Connect: Passenger Climate Control Seat Module C3036a. • Connect: In-Line C313. • Connect: In-Line C213. • Connect: Joint Connector No. 1 C261. • Disconnect: Parking Aid Module C4014b. • Inspect the parking aid module C4014b for damage. • **Is the parking aid module C4014b OK?**	**Yes** GO to Q20 . **No** REPAIR the parking aid module C4014b. CARRY OUT the diagnostic tool data link test.
Q20 CHECK CIRCUIT 4-GN10 (GY) BETWEEN THE DLC C251 AND THE PARKING AID MODULE C4014B FOR AN OPEN	
• Measure the resistance between the parking aid module C4014b-1, circuit 4-GN10 (GY), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  A0057819 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q25 . **No** GO to Q21 .
Q21 CHECK IN-LINE C213 FOR DAMAGE	
• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to Q22 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q22 CHECK CIRCUIT 4-GN10 (GY) BETWEEN THE PARKING AID MODULE C4014B AND IN-LINE C213F FOR AN OPEN	

• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and the parking aid module C4014b-1, circuit 4-GN10 (GY), harness side.  A0057820 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q23 . **No** REPAIR the circuit between the parking aid module C4014b and in-line C213F. CARRY OUT the diagnostic tool data link test.
Q23 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213M AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between in-line C213M-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067849 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q24 . **No** REPAIR the circuit between in-line C213M and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
Q24 CHECK JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.  A0067850 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
Q25 CHECK THE UBP COMMUNICATIONS NETWORK WITH THE PARKING AID MODULE DISCONNECTED	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Data Link Diagnostics Test. • **Did the diagnostic tool indicate system passed?**	**Yes** GO to Q28 . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Q26 CHECK FOR CORRECT DRIVER TEMPERATURE CONTROL SEAT MODULE OPERATION	

• Disconnect all the driver temperature control seat module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the driver temperature control seat module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new driver temperature control seat module. REFER to Section 501-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Q27 CHECK FOR CORRECT PASSENGER TEMPERATURE CONTROL SEAT MODULE OPERATION	

• Disconnect all the passenger temperature control seat module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the passenger temperature control seat module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new passenger temperature control seat module. REFER to Section 501-10 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Q28 CHECK FOR CORRECT PARKING AID MODULE OPERATION	

• Disconnect all the parking aid module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the parking aid module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new parking aid module. REFER to Section 413-13 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test R: The Electronic Parking Brake Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The electronic parking brake module communicates with the diagnostic tool through the standard corporate protocol (SCP) communications network circuits 4-CG16 (GY/RD) and 5-CG16 (BU/RD). If one of the SCP communications network circuits become shorted to ground or voltage, or if some but not all termination resistors are lost, communications can continue. Check circuits 4-CG16 (GY/RD) and 5-CG16 (BU/RD) between the electronic parking brake module C4205b and the data link connector (DLC) C251. The total resistance values must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-CG16 (GY/RD) and 5-CG16 (BU/RD), damage to the DLC C251, damage to the electronic parking brake module C4205b, or a problem in the interior auxiliary junction box (AJB) C283b, interior AJB C283d, joint connector No. 5 C427 or joint connector No. 4 C223.

Possible Causes

- circuits 4-CG16 (GY/RD) and 5-CG16 (BU/RD) shorted to ground or open
- electronic parking brake module C4205b
- interior AJB C283b
- interior AJB C283d
- joint connector No. 5 C427
- joint connector No. 4 C223
- DLC C251
- electronic parking brake module

PINPOINT TEST R: THE ELECTRONIC PARKING BRAKE MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
R1 CHECK THE ELECTRONIC PARKING BRAKE MODULE C4205B FOR DAMAGE	
• Key in OFF position. • Disconnect: Electronic Parking Brake Module C4205b. • Inspect the electronic parking brake module C4205b for damage. • **Is the electronic parking brake module C4205b OK?**	**Yes** GO to R2 . **No** REPAIR the electronic parking brake module C4205b as necessary. TEST the system for normal operation.
R2 CHECK FOR AN OPEN BETWEEN THE DLC C251 AND THE ELECTRONIC PARKING BRAKE MODULE C4205B	
• Measure the resistance between the electronic parking brake module C4205b-1, circuit 4-CG16 (GY/RD), harness side and the DLC C251-2, circuit 4-EG7 (GY/RD), harness side.	**Yes** GO to R9 . **No** GO to R3 .

 A0057805 • Measure the resistance between the electronic parking brake module C4205b-7, circuit 5-CG16 (BU/RD), harness side and the DLC C251-10, circuit 5-EG7 (BU/RD), harness side.  A0057810 • **Are the resistances less than 5 ohms?**	
R3 CHECK FOR AN OPEN BETWEEN JOINT CONNECTOR NO. 5 C427 AND THE ELECTRONIC PARKING BRAKE MODULE C4205B	
• Disconnect: Joint Connector No. 5 C427. • Measure the resistance between the electronic parking brake module C4205b-1, circuit 4-CG16 (GY/RD), harness side and joint connector No. 5 C427-2, circuit 4-CG16 (GY/RD), harness side.  A0067866 • Measure the resistance between the electronic parking brake module C4205b-7, circuit 5-CG16 (BU/RD), harness side and joint connector No. 5 C427-13, circuit 5-CG16 (BU/RD), harness side.  A0067867 • **Are the resistances less than 5 ohms?**	**Yes** GO to R4 . **No** REPAIR the circuit in question. TEST the system for normal operation.
R4 CHECK JOINT CONNECTOR NO. 5 C427 FOR AN OPEN	
• Measure the resistance between joint connector No. 5 C427-1, component side and joint connector No. 5 C427-2, component side.	**Yes** GO to R5 . **No** REPAIR joint connector No. 5 C427 as

 A0067868 • Measure the resistance between joint connector No. 5 C427-12, component side and joint connector No. 5 C427-13, component side.  A0067869 • **Are the resistances less than 5 ohms?**	necessary. TEST the system for normal operation.
R5 CHECK FOR AN OPEN BETWEEN THE INTERIOR AUXILIARY JUNCTION BOX (AJB) C283B AND JOINT CONNECTOR NO. 5 C427	
• Disconnect: Interior AJB C283b. • Measure the resistance between the interior AJB C283b-8, circuit 4-EG1 (GY/RD), harness side and joint connector No. 5 C427-1, circuit 4-EG1 (GY/RD), harness side.  A0067870 • Measure the resistance between the interior AJB C283b-4, circuit 5-EG1 (BU/RD), harness side and joint connector No. 5 C427-12, circuit 5-EG1 (BU/RD), harness side.  A0067871 • **Are the resistances less than 5 ohms?**	**Yes** GO to R6 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
R6 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283B AND THE INTERIOR AJB C283D	

• Disconnect: Interior AJB C283d. • Measure the resistance between the interior AJB C283d-16, component side and the interior AJB C283b-8, component side.  A0057792 • Measure the resistance between the interior AJB C283d-12, component side and the interior AJB C283b-4, component side.  A0057793 • **Are the resistances less than 5 ohms?**	**Yes** GO to R7 . **No** INSTALL a new interior AJB. TEST the system for normal operation.
R7 CHECK FOR AN OPEN BETWEEN THE INTERIOR AJB C283D AND JOINT CONNECTOR NO. 4 C223	
• Disconnect: Joint Connector No. 4 C223. • Measure the resistance between the interior AJB C283d-16, circuit 4-EG1 (GY/RD), harness side and joint connector No. 4 C223-12, circuit 4-EG1 (GY/RD), harness side.  A0067872 • Measure the resistance between the interior AJB C283d-12, circuit 5-EG1 (BU/RD), harness side and joint connector No. 4 C223-11, circuit 5-EG1 (BU/RD), harness side.  A0067887 • **Are the resistances less than 5 ohms?**	**Yes** GO to R8 . **No** REPAIR the circuit in question. CARRY OUT the diagnostic tool data link test.
R8 CHECK JOINT CONNECTOR NO. 4 C427 FOR AN OPEN	

• Measure the resistance between joint connector No. 4 C223-12, component side and joint connector No. 4 C223-14, component side.  A0004357 • Measure the resistance between joint connector No. 4 C223-9, component side and joint connector No. 4 C223-11, component side.  A0004362 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question between the DLC C251 and joint connector No. 4 C223. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 4 C223. TEST the system for normal operation.
R9 CHECK FOR CORRECT ELECTRONIC PARKING BRAKE MODULE OPERATION	

• Disconnect all the electronic parking brake module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the electronic parking brake module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new electronic parking brake module. REFER to Section 206-05 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test S: The Parking Aid Module Does Not Respond To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The parking aid module communicates with the diagnostic tool through the universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network circuit 4-GN10 (GY). If circuit 4-GN10 (GY) becomes open or shorted to ground, communications to that module is not possible. Check circuit 4-GN10 (GY) between the parking aid module C4014b and the data link connector (DLC) C251. The total resistance value must not be more than 5 ohms. If the resistance is more than 5 ohms, there is either an open in circuit 4-GN10 (GY), damage to the DLC C251, damage to the parking aid module C4014b, or a problem in the in-line C213 or joint connector No. 1 C261.

Possible Causes

- circuit 4-GN10 (GY) shorted to ground or open

- parking aid module C4014b
- in-line C213
- joint connector No. 1 C261
- DLC C251
- parking aid module

PINPOINT TEST S: THE PARKING AID MODULE DOES NOT RESPOND TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
S1 CHECK THE PARKING AID MODULE C4014B FOR DAMAGE	
• Key in OFF position. • Disconnect: Parking Aid Module C4014b. • Inspect the parking aid module C4014b for damage. • **Is the parking aid module C4014b OK?**	**Yes** GO to S2 . **No** REPAIR the parking aid module C4014b. CARRY OUT the diagnostic tool data link test.
S2 CHECK CIRCUIT 4-GN10 (GY) BETWEEN THE DATA LINK CONNECTOR (DLC) C251 AND THE PARKING AID MODULE C4014B FOR AN OPEN	
• Measure the resistance between the parking aid module C4014b-1, circuit 4-GN10 (GY), harness side and the DLC C251-3, circuit 4-ED6 (GY), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to S7 . **No** GO to S3 .
S3 CHECK IN-LINE C213 FOR DAMAGE	
• Disconnect: In-Line C213. • Inspect in-line C213M and in-line C213F for damage. • **Are in-line C213M and in-line C213F OK?**	**Yes** GO to S4 . **No** REPAIR in-line C213M and in-line C213F. CARRY OUT the diagnostic tool data link test.
S4 CHECK CIRCUIT 4-GN10 (GY) BETWEEN THE PARKING AID MODULE C4014B AND IN-LINE C213F FOR AN OPEN	
• Measure the resistance between in-line C213F-11, circuit 4-HC1 (GY/RD), harness side and the parking aid module C4014b-1, circuit 4-GN10 (GY), harness side.	**Yes** GO to S5 . **No** REPAIR the circuit between the parking aid module C4014B and in-line

 A0057820 • **Is the resistance less than 5 ohms?**	C213F. CARRY OUT the diagnostic tool data link test.
S5 CHECK CIRCUIT 4-HC1 (GY/RD) BETWEEN IN-LINE C213M AND JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Disconnect: Joint Connector No. 1 C261. • Measure the resistance between in-line C213M-11, circuit 4-HC1 (GY/RD), harness side and joint connector No. 1 C261-11, circuit 4-HC1 (GY/RD), harness side.  A0067849 • **Is the resistance less than 5 ohms?**	**Yes** GO to S6 . **No** REPAIR the circuit between in-line C213M and joint connector No. 1 C261. CARRY OUT the diagnostic tool data link test.
S6 CHECK JOINT CONNECTOR NO. 1 C261 FOR AN OPEN	
• Measure the resistance between joint connector No. 1 C261-10, component side and joint connector No. 1 C261-11, component side.  A0067850 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR the circuit between joint connector No. 1 C261 and the DLC C251. CARRY OUT the diagnostic tool data link test. **No** REPAIR joint connector No. 1 C261 as necessary. CARRY OUT the diagnostic tool data link test.
S7 CHECK FOR CORRECT PARKING AID MODULE OPERATION	

• Disconnect all the parking aid module connectors.
• Check for:
  • corrosion
  • push-out pins
• Connect all the parking aid module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new parking aid module. REFER to Section 413-13 . TEST the system for normal operation.
	
	CARRY OUT the diagnostic tool data link test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded

	connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test T: No Module/Network Communication No Power To The Diagnostic Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

Under normal operation the diagnostic tool is connected to the data link connector (DLC) C251 to communicate with the standard corporate protocol (SCP) communications network, universal asynchronous receiver-transmitter (UART)-based protocol (UBP) communications network, and the international standards organization (ISO) 9141 communications networks. If communication cannot be established, the diagnostic tool and the DLC C251 must be checked for damage. If the diagnostic tool and the DLC C251 are OK, circuit 29-ED6 (OG/YE) must be checked for voltage and 31-ED6 (BK/YE), and 91-ED6 (BN) must be checked for an open condition.

Possible Causes

- DLC C251
- diagnostic tool
- circuit 29-ED6 (OG/YE) open
- circuit 31-ED6 (BK/YE) open
- circuit 91-ED6 (BN) open
- central junction box (CJB) fuse 6 (10A)

PINPOINT TEST T: NO MODULE/NETWORK COMMUNICATION NO POWER TO THE DIAGNOSTIC TOOL

Test Step	Result / Action to Take
T1 CHECK THE DIAGNOSTIC TOOL CONNECTOR	
• Inspect the diagnostic tool pins for damage. • **Are the pins OK?**	**Yes** GO to T2 . **No** REPAIR the diagnostic tool connector. TEST the system for normal operation.
T2 CHECK THE DATA LINK CONNECTOR (DLC) C251 FOR DAMAGE	
• Key in OFF position. • Inspect the DLC C251 pins for damage. • **Are the pins OK?**	**Yes** GO to T3 . **No** REPAIR the DLC C251. TEST the system for normal operation.
T3 CHECK THE VOLTAGE TO THE DIAGNOSTIC TOOL CIRCUIT 29-ED6 (OG/YE)	

• Measure the voltage between the DLC C251-16, circuit 29-ED6 (OG/YE), harness side and ground.  A0057821 • **Is the voltage greater than 10 volts?**	**Yes** GO to T4 . **No** REPAIR the supply circuit. TEST the system for normal operation.
T4 CHECK THE DLC GROUND CIRCUIT 31-ED6 (BK/YE), AND CIRCUIT 91-ED6 (BN)	
• Measure the resistance between the DLC C251-4, circuit 31-ED6 (BK/YE), harness side and ground and between the DLC C251-5, circuit 91-ED6 (BN), harness side and ground.  A0057822 • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the diagnostic tool. TEST the system for normal operation. **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

Module Configuration

Printable View (21 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Definition of Terms

Calibration Update: Some modules are designed to be flashed or reflashed with complete new software packages. This process of reflashing the module is a calibration update.

Programmable Parameters: These are options contained within the existing software. These include items such as tire size, customer preference items and anti-theft options. The current settings are required to be downloaded from an existing module, then uploaded to a new module. Customer preference items can be configured using a diagnostic tool. Programming parameters is very different from updating calibrations as no software is changed only the options already contained in the software.

Principles of Operation

Some modules must be programmed as part of the repair procedure. If this procedure is not followed the module does not function correctly and may set a number of diagnostic trouble codes (DTCs), including B2477 or P1639, which indicate that some necessary data has not been programmed into the module.

Modules that need programming should not be exchanged between vehicles. In most cases the parameter values or settings are unique to that vehicle, and if not set correctly cause concerns or faults.

The Worldwide Diagnostic System (WDS) automatically attempts to retrieve the module configuration information from all modules when vehicle ID is carried out. If the module does not contain correct information, the diagnostic tool either requests As-Built data or displays a list of items that need to be manually configured. The diagnostic tool programs the module based on the data entered.

For additional WDS/diagnostic tool programming procedures, refer to Programmable Module Installation in this section.

There are 3 different methods used for module programming:

- programmable module installation (PMI)
- calibration update
- programmable parameters

Some modules do not support all 3 methods.

PMI

The PMI method is used when a new programmable module is installed on the vehicle. It is no longer necessary to command the diagnostic tool to gather module option content from the old module. The diagnostic tool automatically obtains any available module option content information from the old module during the vehicle ID routine that runs when the diagnostic tool is initially connected to the vehicle. It is important that you connect the WDS to the vehicle and allow it to identify the vehicle and obtain configuration data prior to removing any modules.

Calibration Update

Calibration update is used to install a new calibration and strategy into a module.

Programmable Parameters

If a module that has been modified using programmable parameters needs to be installed, the PMI procedure maintains the parameters in their altered state if the WDS is able to communicate with the old module during Vehicle ID. Otherwise, it may be necessary to use programmable parameters to return them to the altered state.

Vehicle Identification (VID) Block

Some powertrain control modules (PCMs) contain a memory area called a VID block. The PCM VID block may contain the factory settings for the configurable modules unless the PCM is flashed with a new calibration, in which case some PCM parameters may be modified.

As-Built Data Center

The As-Built data center maintains a record of the vehicle configuration in a database. The vehicle identification number (VIN) is required to obtain this information. The As-Built data center records the applicable module configurations stored in each module before the vehicle leaves the factory. The As-Built data center will always reflect the original build of the vehicle as it left the factory. Contact the As-Built data center only when directed to do so by the diagnostic tool.

Inspection and Verification

1. Visually inspect for obvious signs of electrical damage.

   Visual Inspection Chart

Electrical
• Wiring harness • Connectors

Configurable Modules

The vehicle contains the following modules that are configurable:

- anti-lock brake system/traction control (ABS/TC) module or stability assist module (if equipped)
- audio control module (ACM)
- driver climate control seat module
- driver door module (DDM)

- dual automatic temperature control (DATC)
- electronic parking brake
- front electronics module (FEM)
- instrument cluster
- message center
- navigation system module
- passenger climate control seat module
- PCM
- rear electronics module (REM)

Programmable Parameters Index

Module	Calibration Updatable	PMI	Programmable Parameter
ABS/TC Module or Stability Assist Module (if equipped)	No	Yes	
ACM	No	Yes	
Driver Climate Control Seat Module	No	Yes	
DDM	No	Yes	• Autolocks • Easy Entry/Exit • Horn Chirp • Two-Stage Locking
DATC	No	Yes	• Moisture Purge
Electronic Parking Brake	No	Yes	
FEM	No	Yes	
Instrument Cluster	No	Yes	• Beltminder • Headlamps On With Wipers • Language
Message Center	No	Yes	
Navigation System Module	No	Yes	
Passenger Climate Control Seat Module	No	Yes	
PCM	Yes	Yes	• Axle Ratio • Fuel Octane • Tire/Wheel Size • Transmission Type
REM	No	Yes

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Using the Vehicle Communication Module (VCM) When the Original Body Chassis Electrical Module is Not Available

1. Install the new module.
2. Using the VCM and the latest version of the service function card, SELECT: Programmable Module Installation.
3. Select the module being installed.
4. Follow the on-screen instructions.
5. SELECT: Retrieve Module Configuration Old ECU and press trigger.
6. Follow the on-screen instructions.
7. The VCM attempts to retrieve the module data from the powertrain control module (PCM).
   - If the module data is available, go to Step A.
   - If the VCM displays: Call As-Built Data Center, go to Step B.

Step A

1. SELECT: Restore Configuration New ECU. Press trigger.
2. The VCM completes loading the retrieved data and displays Module Download Successful.
3. Test the module for correct operation.

Step B

1. Press the trigger.
2. If the VCM asks for vehicle data, enter the vehicle data, then press store.
3. The VCM asks for module data line 1. Enter the data and press store.
4. The VCM then asks if there is an additional line of data available for that address. Select YES or NO depending on the information in the As Built Data Sheet.

5. Repeat Steps 3 and 4 until the answer is NO for Step 4.
6. The VCM should show a screen stating that the module data was stored. Press the trigger.
7. Follow the on-screen instructions.
8. SELECT: Restore Configuration New ECU. Press the trigger.
9. The VCM completes loading the retrieved data and displays Module Download Successful.
10. Test the module for correct operation.

Using the Vehicle Communication Module (VCM) When the Original Body Chassis Electrical Module is Available

1. With the original module still installed, using the VCM and the latest version of the service function card, SELECT: Programmable Module Installation.
2. Select the module being installed and press the trigger.
3. Follow the on-screen instructions.
4. SELECT: Retrieve Module Configuration Old ECU. Press the trigger.
5. Follow the on-screen instructions.
6. INSTALL new module, SELECT: Restore Configuration New ECU. Press the trigger.
7. The VCM completes loading the retrieved data and displays Module Download Successful.
8. Test the module for correct operation.

Using the Worldwide Diagnostic System (WDS) When the Original Body Chassis Electrical Module is Not Available

1. Install the new module.
2. Connect the WDS and ID the vehicle as normal.
3. From the Toolbox icon, select and highlight Module Programming. Then highlight the module that was installed and press the check mark.
4. Select and highlight Programmable Module Installation. Then highlight the module that was installed and press the check mark.
5. Follow the on-screen instructions, turn the ignition key to the OFF position and press the check mark.
6. The WDS retrieves the module data from the PCM, automatically downloads the data into the new module, and displays Module Configuration Complete.
7. If the data is not available in the PCM, the WDS displays a screen stating to contact the As-Built Data Center. Retrieve the data from WWW.FMCDEALER.COM at this time and press the check mark.

8. Enter the module data (the module address and line are displayed to the left of the 3 entry boxes) and press the check mark.
9. The WDS downloads the data into the new module and displays Operation Successful Programming Complete.
10. Test the module for correct operation.

Using the Worldwide Diagnostic System (WDS) When the Original Body Chassis Electrical Module is Available

1. Connect the WDS and ID the vehicle as normal.
2. From the Toolbox icon, select and highlight Module Programming and press the check mark.
3. Select and highlight Programmable Module Installation.
4. Follow the on-screen instructions, turn the ignition key to the OFF position, and press the check mark.
5. Install the new module and press the check mark.
6. Follow the on-screen instructions, turn the ignition key to the ON position, and press the check mark.
7. The module configuration is complete.
8. Test the module for correct operation.

Jacking

Anti-Theft Perimeter

Printable View (8 KB)

The anti-theft perimeter protection feature is controlled by the front electronic module (FEM), the rear electronic module (REM), and the driver door module (DDM). The alarm can be armed using the LOCK button in the remote keyless entry (RKE) transmitter to the DDM, which sends a message through the Standard Corporate Protocol (SCP) communications network to the FEM; or by using the driver or passenger door lock switch if the corresponding door is open when LOCK is actuated; or by locking the vehicle with the key in the driver door lock cylinder or the RKE keypad by pressing 7/8 and 9/0 simultaneously. The FEM and REM will then monitor all features, which will activate the alarm in the event of an unauthorized entry.

The luggage compartment lid lock cylinder will not disarm the vehicle's perimeter alarm. The luggage compartment alarm can be temporarily inhibited through the luggage compartment lid disarm switch, located in the luggage compartment lock cylinder or opening the lugguage compartment with the RKE transmitter or the RKE keypad. Once the luggage compartment lid closes, the perimeter alarm system will immediately start monitoring the luggage compartment. The perimeter alarm can only be disarmed by unlocking the vehicle using the RKE transmitter or the driver door lock cylinder switch, or by cycling to RUN a valid programmed key in the ignition switch or by entering the correct vehicle unlock code on the RKE keypad.

Additionally, an ignition switch tamper circuit and a signal hardwire line from the FEM to the REM are monitored.

If any of the above features receive any activation once the alarm has been armed, the alarm activates the visual and audible alerts.

Anti-Theft Perimeter Printable View (229 KB)

Refer to Wiring Diagrams Cell 117 , Anti-Theft for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Anti-theft hood switch • Driver door arm/disarm switch • Luggage compartment lid disarm switch • Ignition switch • Vehicle horn • Door ajar switches • Luggage compartment lid ajar switch	• Central junction box (CJB) fuse 5 (5A) • Battery junction box (BJB) fuse(s): ♦ 22 (20A) ♦ 25 (40A) • FEM • REM • DDM • Connectors • Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the key switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for front electronic module (FEM), refer to Section 419-10 .
   - No response/not equipped for rear electronic module (REM), refer to Section 419-10 .
   - No response/not equipped for driver door module (DDM), refer to Section 419-10 .
   - System passed, select FEM, REM and DDM from the main menu, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM, REM and DDM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index, or the Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

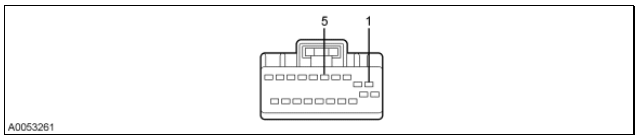
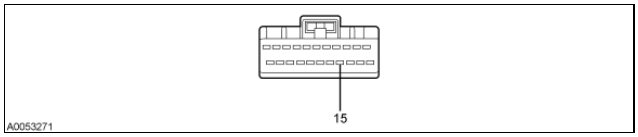
3	8-GL7 (WH) signal circuit from the anti-theft hood switch	0 ohms between the FEM and the anti-theft hood switch, greater than 10,000 ohms to ground with the FEM and the anti-theft hood switch disconnected.
6	29-DK20 (OG/GN) voltage feed to the FEM	12 volts to FEM at all times, greater than 10, 000 ohms to ground with the FEM disconnected.

Front Electronic Module (FEM) C201f



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-DK22 (OG/YE) voltage feed to the FEM	12 volts with ignition switch in the ON position, greater than 10,000 ohms to ground with the FEM disconnected.
5	91S-GL13 (BK/YE) ground circuit for the FEM	0 volts, less than 5 ohms to ground with the FEM disconnected.

Rear Electronic Module (REM) C420b



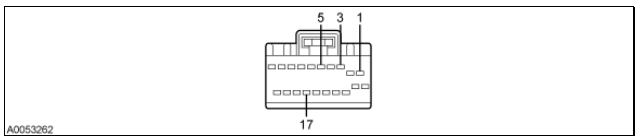
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
15	8-GL27 (WH/BU) signal feed from the luggage compartment lid ajar switch to the DDM	Less than 5 ohms between the luggage compartment lid ajar switch and the REM, greater than 10,000 ohms to ground with the REM and the luggage compartment lid ajar switch disconnected.

Rear Electronic Module (REM) C420c

	Circuit Designation/Description	Normal Condition/Measurement

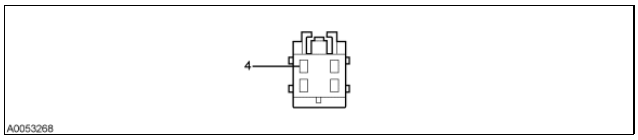
Pin Number(s)		
13	29S-DK31 (OG/BK) voltage feed to the REM	12 volts with ignition switch in the ON position, greater than 10,000 ohms to ground with the REM disconnected.

Rear Electronic Module (REM) C420d



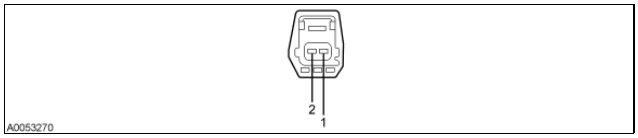
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	15S-DK32 (GN/RD) voltage feed to the REM	12 volts with ignition switch in the ON position, greater than 10,000 ohms to ground with the REM disconnected.
3	29-DK31 (OG/BK) voltage feed to the REM	12 volts at all times, greater than 10,000 ohms to ground with the REM disconnected.
5	91S-GL13 (BN) REM security output to the FEM	Less than 5 ohms resistance between REM and FEM with the REM and the FEM disconnected.
17	31S-GL19 (BK/GN) right rear door ajar status circuit	Less than 5 ohms between right rear door latch and REM, greater than 10,000 ohms to ground with the REM and the right rear door latch disconnected.

Rear Electronic Module (REM) C420f, C420g



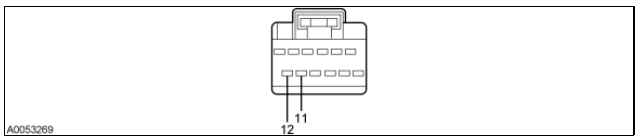
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4 (C420f)	30-DK30A (BK) voltage feed to the REM	12 volts at all times, greater than 10,000 ohms to ground with the REM disconnected.
4 (C420g)	30-DK30 (RD) voltage feed to the REM	12 volts at all times, greater than 10,000 ohms to ground with the REM disconnected.

Luggage Compartment Lid Disarm Switch C483



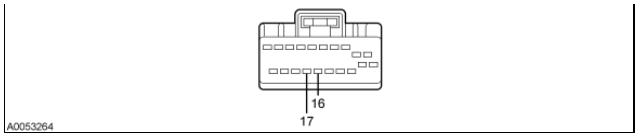
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-GL27 (BK/OG) ground circuit for the luggage compartment lid disarm switch	0 voltage, less than 5 ohms to ground with luggage compartment lid disarm switch disconnected.
2	8-GL27 (WH/BU) signal feed from the luggage compartment lid disarm switch to the REM	Less than 5 ohms between the luggage compartment lid disarm switch and the REM, greater than 10,000 ohms to ground with the REM and the luggage compartment lid disarm switch disconnected.

Driver Door Module (DDM) C501a



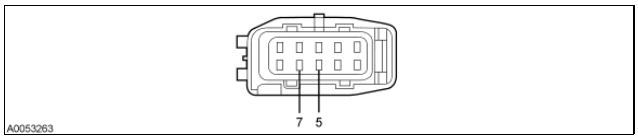
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	29-AJ80 (OG) voltage feed for the DDM	12 volts at all times, greater than 10,000 ohms to ground with the DDM disconnected.
12	29S-AJ86 (OG/BU) power feed for the DDM	12 volts with Ignition Switch in the ON position, greater than 10,000 ohms to ground with the DDM disconnected.

Driver Door Module (DDM) C501c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
16	31S-AA78 (BK/BU) driver set circuit	Less than 5 ohms between the driver door latch and the DDM, greater than 10,000 ohms to ground with the DDM and the driver door latch disconnected.
17	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms between the driver door latch and the DDM, greater than 10,000 ohms to ground with the DDM and the driver door latch disconnected.

Drivers Door Lock Unit C525



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms between the driver door latch and the DDM, greater than 10,000 ohms to ground with the DDM and the driver door latch disconnected.
7	31S-AA78 (BK/BU) driver set switch circuit	Less than 5 ohms between the driver door latch and the DDM, greater than 10,000 ohms to ground with the DDM and the driver door latch disconnected.

Pinpoint Test A: The Anti-Theft System Does Not Operate Correctly Lights Flash 5 Times When Arming The System

Normal Operation

The ajar switches are monitored by the rear electronic module (REM) and front electronic module (FEM). When an arm request is received by the FEM the switch positions are queried, and if any door, hood, or luggage compartment lid is ajar, then lights flash 5 times.

If the doors are locked with the remote keyless entry (RKE) transmitter and the lock button is pressed a 2nd time, the horn will chirp twice to indicate that a door, decklid or hood is ajar.

Possible Causes

- luggage compartment lid ajar switch
- anti-theft hood switch
- door ajar switch(es)
- FEM
- REM
- circuit 8-GL7 (WH) open or short to ground
- circuit 31-GL7 (BK/YE) open or short to power

PINPOINT TEST A: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY LIGHTS FLASH 5 TIMES WHEN ARMING THE SYSTEM

Test Step	Result / Action to Take
A1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST FRONT ELECTRONIC MODULE (FEM)	

• Use the recorded FEM DTCs from the continuous and on-demand self-test. • **Are any FEM DTCs recorded?**	**Yes** If DTC B1519, GO to A5 . For all other FEM DTCs, REFER to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index. **No** GO to A2 .
A2 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to A3 .
A3 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST DRIVER DOOR MODULE (DDM)	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** REFER to the Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index. **No** GO to A4 .
A4 CHECK THE INTERIOR COURTESY LAMP OPERATION	
• Open and close each door, while observing the interior courtesy lamps. • Open and close the luggage compartment lid, while observing the luggage compartment lamp. • **Do the courtesy lamps operate correctly?**	**Yes** GO to A5 . **No** REFER to Section 417-02 .
A5 CHECK FOR A FAULTY ANTI-THEFT HOOD SWITCH	
• Key in ON position. • Disconnect: Anti-Theft Hood Switch C127. • Monitor the FEM PID HOOD_SW, while connecting a fused (5 A) jumper wire between the anti-theft hood switch C127-1, circuit 8-GL7 (WH), harness side and the anti-theft hood switch C127-2, circuit 31-GL7 (BK/YE), harness side.	**Yes** INSTALL a new the anti-theft hood switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to A6 .

 A0003769 • **Does the FEM PID HOOD_SW change from ajar to closed?**	
A6 CHECK CIRCUIT 31S-GL7 (BK/YE) FOR AN OPEN	
• Measure the resistance between the anti-theft hood switch C127-2, circuit 31-GL7 (BK/YE), harness side and ground.  A0003770 • **Is the resistance less than 5 ohms?**	**Yes** GO to A7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A7 CHECK CIRCUIT 8-GL7 (WH) FOR AN OPEN	
• Disconnect: FEM C201c. • Measure the resistance between the anti-theft hood switch C127-1, circuit 8-GL7 (WH), harness side and the FEM C201c-3, circuit 8-GL7 (WH), harness side.  A0003771 • **Is the resistance less than 5 ohms?**	**Yes** GO to A8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A8 CHECK CIRCUIT 91S-GL13 (BK/YE) FOR A SHORT TO BATTERY	
• Disconnect: FEM C201f. • Measure the voltage between the FEM C201f-5, circuit 91S-GL13 (BK/YE), harness side and ground.  A0003766 • **Is the voltage greater than 10 volts?**	**Yes** GO to A9 . **No** GO to A10 .
A9 CHECK THE REM FOR AN INTERNAL SHORT TO BATTERY	

• Key in OFF position. • Disconnect: REM C420d. • Key in ON position. • Measure the voltage between the FEM C201f-5, circuit 91S-GL13 (BK/YE), harness side and ground.  A0003766 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
A10 CHECK THE REM OPERATION	
• Key in OFF position. • Disconnect: REM C420d. • Using a fused (5 A) jumper wire, jumper REM C420d-5, circuit 91S-GL13 (BN), harness side to ground. Using a second fused jumper wire, jumper REM C420d-17, circuit 31S-GL19 (BK/GN), harness side to ground.  A0006303 • Close all doors, hood, and luggage compartment lid. • Arm the anti-theft system. • **Do the lights flash five times when the system is armed?**	**Yes** Remove jumper wires. GO to A11 . **No** INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
A11 CHECK CIRCUIT 91S-GL13 (BK/YE) FOR AN OPEN	
• Measure the resistance between the FEM C201f-5, circuit 91S-GL13 (BK/YE), harness side and the REM C420d-5, circuit 91S-GL13 (BK/YE), harness side.  A0003768 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The Alarm System Does Not Arm/Disarm Using The Driver Door Arm/Disarm Switch

Normal Operation

The driver door arm/disarm switch grounds either circuit 31S-AA78 or 31S-AA79 to the driver door module (DDM). The DDM then communicates over the standard corporate protocol (SCP) communication network to the front electronic module (FEM) to arm/disarm the alarm system.

Possible Causes

- driver door arm/disarm switch
- DDM
- circuit 31S-AA79 (BK/WH) short to ground
- circuit 31S-AA78 (BK/BU) short to ground

PINPOINT TEST B: THE ALARM SYSTEM DOES NOT ARM/DISARM USING THE DRIVER DOOR ARM/DISARM SWITCH

Test Step	Result / Action to Take
B1 RETRIEVE THE RECORDED DTC CODES DRIVER DOOR MODULE (DDM)	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** If DTC B2112 or B2116, GO to B3 . **No** GO to B2 .
B2 CHECK THAT THE DRIVER DOOR LOCK AND UNLOCK PIDS READ CORRECTLY	
• Monitor the DDM PIDs D_DSRM and DRLKCYL while turning the key in the driver door lock cylinder to the LOCK and UNLOCK positions. • **Do the DDM PID values agree with the LOCK positions?**	**Yes** INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** GO to B5 .
B3 CHECK CIRCUIT 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Driver Door Lock Unit C525. • Measure the resistance between the driver door lock unit C525-5, circuit 31S-AA79 (BK/WH), harness side and ground; and between the driver door lock unit C525-7, circuit 31S-AA78 (BK/BU), harness side and ground.  A0003772 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new driver door latch. REFER to Section 501-14 . CLEAR the DTCs. REPEAT the self-test. **No** GO to B4 .
B4 CHECK THE DDM FOR AN INTERNAL SHORT TO GROUND	

• Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003773 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK THE DRIVER SET AND DRIVER RESET SWITCH	
• Disconnect: Driver Door Lock Unit C525. • Monitor the DDM PIDs D_DSRM and DRLKCYL while connecting a fused (5 A) jumper wire between the driver door lock unit C525-5, circuit 31S-AA79 (BK/WH), harness side and ground; and between the driver door lock unit C525-7, circuit 31S-AA78 (BK/BU), harness side and ground.  A0003774 • **Do the DDM PID values agree with the LOCK positions?**	**Yes** INSTALL a new driver door latch. REFER to Section 501-14 . CLEAR the DTCs. REPEAT the self-test. **No** GO to B6 .
B6 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH)	
• Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and the driver door lock unit C525-7, circuit 31S-AA78 (BK/BU), harness side: and the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and the driver door lock unit C525-5, circuit 31S-AA79 (BK/WH), harness side.  A0003775 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: The Alarm System Does Not Arm/Disarm Using The Remote Keyless Entry Transmitter

Normal Operation

The remote keyless (RKE) transmitter triggers the driver door module (DDM) to arm/disarm the alarm system.

Possible Causes

- RKE transmitter
- DDM

PINPOINT TEST C: THE ALARM SYSTEM DOES NOT ARM/DISARM USING THE REMOTE KEYLESS ENTRY TRANSMITTER

Test Step	Result / Action to Take
C1 CHECK THE ALARM SYSTEM USING THE DRIVER DOOR ARM/DISARM SWITCH	
• ARM and DISARM the alarm system using the driver door arm/disarm switch. • **Does the alarm system set and reset correctly?**	**Yes** REFER to Section 501-14 to continue diagnosis of the RKE transmitter. **No** Go To Pinpoint Test B .

Pinpoint Test D: Battery Voltage Out Of Range Front Electronic Module (FEM)

Normal Operation

The front electronic module (FEM) arms/disarms the alarm system. The FEM receives voltage over circuits 29-DK22 (OG/YE) and 29-DK20 (OG/GN), 29S-DK21 (OG/WH).

Possible Causes

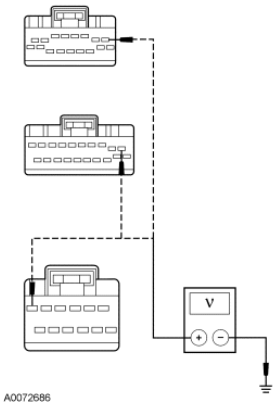
- FEM
- circuit 29-DK22 (OG/YE) open or short to ground
- circuit 29-DK20 (OG/GN) open or short to ground
- circuit 29S-DK21 (OG/WH) open or short to ground

PINPOINT TEST D: BATTERY VOLTAGE OUT OF RANGE FRONT ELECTRONIC MODULE (FEM)

Test Step	Result / Action to Take
D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST FRONT ELECTRONIC MODULE (FEM)	
• Use the recorded FEM DTCs from the continuous and on-demand self-test. • **Are any FEM DTCs recorded?**	**Yes** If DTC B1676, GO to D2 . **No** GO to D3 .
D2 CHECK PID FOR BATTERY VOLTAGE	
NOTE: Turn the ignition switch from OFF to ON to enable the switched system power feature. • Key in ON position. • Monitor the FEM PID VBAT.	**Yes** RUN self-test. If DTC B1676 is still present, INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.

• **Is the voltage between 9 and 16 volts?**	**No** GO to D3 .
D3 CHECK THE VOLTAGE SUPPLY TO THE MODULE	
• Key in OFF position. • Disconnect: FEM C201f. • Disconnect: FEM C201c. • Disconnect: FEM C201a. • Key in ON position. • Using the following table, measure the voltage between FEM connectors, harness side and ground: • **Are the voltages between 9 and 16 volts?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REFER to Section 414-00 to continue battery system diagnosis.

FEM Connector-Pin	Circuit
C201f-1	29-DK22 (OG/YE)
C201c-6	29-DK20 (OG/GN)
C201a-1	29S-DK21 (OG/WH)



Pinpoint Test E: Battery Voltage Out Of Range Rear Electronic Module (REM)

Normal Operation

The rear electronic module (REM) monitors the rear door ajar and luggage compartment lid ajar switch and transmits the ajar status to the front electronic module (FEM) through the communication network. The REM receives voltage over circuits 15S-DK32 (GN/RD), 29-DK31 (OG/BK), 29S-DK31 (OG/BK), 30-DK30A (BK) and 30-DK30 (RD).

Possible Causes

- REM
- circuit 15S-DK32 (GN/RD) open or short to ground
- circuit 29-DK31 (OG/BK) open or short to ground
- circuit 29S-DK31 (OG/BK) open or short to ground
- circuit 30-DK30A (BK) open or short to ground
- circuit 30-DK30 (RD) open or short to ground

PINPOINT TEST E: BATTERY VOLTAGE OUT OF RANGE REAR ELECTRONIC MODULE (REM)

Test Step	Result / Action to Take
E1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** If DTC B1676, GO to E2 . **No** GO to E3 .
E2 CHECK PID FOR BATTERY VOLTAGE	
NOTE: Turn the ignition switch from OFF to ON to enable the switched system power feature. • Key in ON position. • Monitor the REM PID VBAT. • **Is the voltage between 9 and 16 volts?**	**Yes** RUN self-test. If DTC B1676 is still present, INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** GO to E3 .
E3 CHECK THE VOLTAGE SUPPLY TO THE MODULE	
• Key in OFF position. • Disconnect: REM C420d. • Disconnect: REM C420c. • Disconnect: REM C420f. • Disconnect: REM C420g. • Key in ON position. • Using the following table, measure the voltage between the REM connectors, harness side and ground:	**Yes** INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REFER to Section 414-00 to continue battery system diagnosis.

REM Connector-Pin	Circuit
C420d-1	15S-DK32 (GN/RD)
C420d-3	29-DK31 (OG/BK)
C420c-13	29S-DK31 (OG/BK)
C420f-4	30-DK30A (BK)
C420g-4	30-DK30 (RD)

 • **Are the voltages between 9 and 16 volts?**	

Pinpoint Test F: Battery Voltage Out Of Range Driver Door Module (DDM)

Normal Operation

The driver door module (DDM) transmits an arm/disarm signal through the communication network to the front electronic module (FEM). The DDM receives voltage on circuits 29-AJ80 (OG) and 29S-AJ86 (OG/BU)

Possible Causes

- DDM
- circuit 29-AJ80 (OG) open or short to ground
- circuit 29S-AJ86 (OG/BU) open or short to ground

PINPOINT TEST F: BATTERY VOLTAGE OUT OF RANGE DRIVER DOOR MODULE (DDM)

Test Step	Result / Action to Take
F1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST DRIVER DOOR MODULE (DDM)	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** If DTC B1676, GO to F2 . **No** GO to F3 .
F2 CHECK PID FOR BATTERY VOLTAGE	
NOTE: Turn the ignition switch from OFF to ON to enable the switched system power feature. • Key in ON position. • Monitor the DDM PID VBAT. • **Is the voltage between 9 and 16 volts?**	**Yes** RUN self-test. If DTC B1676 is still present, INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** GO to F3 .
F3 CHECK VOLTAGE SUPPLY TO THE MODULE	

• Key in OFF position. • Disconnect: DDM C501a. • Key in ON position. • Using the following table, measure the voltage between the DDM connector, harness side and ground: **DDM Connector-Pin** / **Circuit** C501a-11 / 29-AJ80 (OG) C501a-12 / 29S-AJ86 (OG/BU)  • **Are the voltages between 9 and 16 volts?**	**Yes** INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** REFER to Section 414-00 to continue battery system diagnosis.

Pinpoint Test G: The Alarm System Does Not Operate Correctly Alarm Does Not Activate With Hood Ajar/Open

Normal Operation

The front electronic module (FEM) monitors the anti-theft hood switch to indicate an open hood. The alarm will not activate if the switch is closed and the circuit is grounded.

Possible Causes

- anti-theft hood switch
- FEM
- circuit 8-GL7 (WH) short to ground

PINPOINT TEST G: THE ALARM SYSTEM DOES NOT OPERATE CORRECTLY ALARM DOES NOT ACTIVATE WITH HOOD AJAR/OPEN

Test Step	Result / Action to Take
G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST FRONT ELECTRONIC MODULE (FEM)	
• Use the recorded FEM DTCs from the continuous and on-demand self-test. • **Are any FEM DTCs recorded?**	**Yes** If DTC B1519, Go To Pinpoint Test A . For all other FEM DTCs, REFER to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index. **No** GO to G2 .

G2 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to G3 .
G3 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST DRIVER DOOR MODULE (DDM)	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** REFER to the Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index. **No** GO to G4 .
G4 CHECK ANTI-THEFT HOOD SWITCH OPERATION	
• Key in ON position. • Close the hood. • Monitor the FEM PID HOOD_SW while opening the hood. • **Does the FEM PID HOOD_SW change from closed to ajar?**	**Yes** CHECK for a sticking anti-theft hood switch. TEST the system for normal operation. **No** GO to G5 .
G5 CHECK FOR A FAULTY ANTI-THEFT HOOD SWITCH	
• Monitor the FEM PID HOOD_SW. • Disconnect: Anti-Theft Hood Switch C127. • **Does the FEM PID HOOD_SW change when the anti-theft hood switch is disconnected?**	**Yes** INSTALL a new anti-theft hood switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to G6 .
G6 CHECK CIRCUIT 8-GL7 (WH) FOR AN OPEN	
• Disconnect: FEM C201c. • Measure the resistance between the anti-theft hood switch C127-1, circuit 8-GL7 (WH), harness side and ground.  A0063165 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test H: The Alarm System Does Not Operate Correctly Luggage Compartment Lid Disarm Switch

Normal Operation

The alarm system can be suspended for the luggage compartment lid by using the luggage compartment lid disarm switch. The switch position is monitored by the rear electronic module (REM).

Possible Causes

- luggage compartment lid disarm switch
- REM
- circuit 8-GL27 (WH/BU) open or short to ground
- circuit 31-GL27 (BK/OG) open

PINPOINT TEST H: THE ALARM SYSTEM DOES NOT OPERATE CORRECTLY LUGGAGE COMPARTMENT LID DISARM SWITCH

NOTE: The luggage compartment lock cylinder will not disarm the perimeter alarm system. Once armed, the perimeter alarm can only be disarmed using the remote keyless entry (RKE) transmitter, driver door arm/disarm switch, the RKE keypad or a valid passive anti-theft system (PATS) key inserted into the ignition lock cylinder and turned to RUN.

Test Step	Result / Action to Take
H1 RETRIEVE THE RECORDED DTCS FROM THE ON-DEMAND SELF-TEST REM	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are there any DTCs recorded?**	**Yes** If DTC B1984 GO to H2 . **No** GO to H3 .
H2 CHECK CIRCUIT 8 GL27 (WH/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Luggage Compartment Lid Disarm Switch C483. • Disconnect: REM C420b. • Measure the resistance between the luggage compartment lid disarm switch C483-2, circuit 8 GL27 (WH/BU), and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new luggage compartment lid disarm switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
H3 CHECK CIRCUIT 31 GL27 (BK/OG)	

• Key in OFF position. • Disconnect: Luggage Compartment Lid Disarm Switch C483. • Measure the resistance between the luggage compartment lid disarm switch C483-1, circuit 31 GL27 (BK/OG), harness side and ground.  A0040153 • **Is the resistance less than 5 ohms?**	**Yes** GO to H4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
H4 CHECK CIRCUIT 8 GL27 (WH/BU) FOR OPEN	
• Disconnect: REM C420b. • Measure the resistance between the REM C420b-15, circuit 8 GL27 (WH/BU), harness side and the luggage compartment lid disarm switch C483-2, circuit 8 GL27 (WH/BU), harness side.  A0040154 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new luggage compartment lid disarm switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Anti-Theft Passive Anti-Theft System (PATS)

Printable View (10 KB)

The passive anti-theft system (PATS) uses radio frequency identification technology to deter a driveaway theft. Passive means that it does not require any action from the user to make it functional.

PATS uses a specially encoded ignition key. Each PATS key contains a permanently installed electronic device called a transponder. Each transponder contains a unique electronic identification code, with over 72 million billion combinations.

Each PATS key must be programmed into the vehicle PATS module before it can be used to start the engine. There are special diagnostic procedures described in the workshop manual that must be carried out if new PATS keys are to be installed. Refer to General Procedures in this section.

The PATS key is larger than a traditional ignition key. The PATS key does not require batteries and should last the life of the vehicle.

The transceiver module communicates with the PATS key. This module is located in the instrument panel attached to the ignition lock cylinder housing. During each vehicle start sequence, the transceiver module reads the PATS key identification code and sends the data to the instrument cluster. The instrument cluster validates the code as correct and sends the powertrain control module (PCM) an enable code through the network.

The control function is contained in the instrument cluster. This module carries out all of the PATS functions such as receiving the identification code from the PATS key and controlling the starter enable signal and communicates with the PCM to enable the engine. The instrument cluster initiates the key interrogation sequence when the PATS key is inserted in the ignition switch and also when the switch is turned to RUN or START.

The PATS module uses the instrument cluster to enable or disable the engine. All elements of PATS must be functional before the engine is allowed to start. If any of the components are not working correctly, the vehicle will not start.

NOTE: If either the instrument cluster or the powertrain control module (PCM) are installed, both modules require a parameter reset to allow both modules to recognize the passive anti-theft system (PATS) keys. Failure to carry out the parameter reset to both the instrument cluster and PCM may result in a no start condition.

PATS uses a visual anti-theft indicator. This indicator proves out for 3 seconds when the ignition switch is turned to RUN or START under normal operation. If there is a PATS concern, this anti-theft indicator either flashes rapidly or glow steadily (for more than 3 seconds) when the ignition switch is turned to RUN or START.

PATS is not compatible with aftermarket remote start systems, which allow the vehicle to be started from outside the vehicle. These systems may reduce the vehicle security level, and also may cause no-start issues. Remote start systems must be removed before investigation of PATS-related no-start issues.

Anti-Theft Passive Anti-Theft System (PATS) Printable View (18 KB)

Refer to Wiring Diagrams Cell 112 , Anti-Theft for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Passive Anti-Theft System (PATS) Inspection and Verification

Printable View (10 KB)

NOTE: The new instrument cluster must be reconfigured after installation. Refer to Section 418-01 .

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Large metallic objects, a second anti-theft PATS key on the same key ring as the PATS key, or electronic devices on the key chain that can be used to purchase gasoline or similar items • ignition lock cylinder • PATS key • Use of a non-PATS key • More than one PATS key on the customer's key chain	• Central junction box (CJB) fuse(s): ♦ 7 (5A) ♦ 24 (5A) • Instrument cluster • PATS transceiver module • Ignition switch • Loose or corroded connection(s)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the diagnostic tool does not power up, refer to the diagnostic tool manual.
5. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - ISO, SCP or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for instrument cluster, refer to Section 413-01 .
   - No response/not equipped for powertrain control module (PCM), refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out the self-test diagnostics for the instrument cluster.
6. If no DTCs related to the concern are retrieved, go to the Passive Anti-Theft System (PATS) Symptom Chart in this section to continue diagnosis.

Passive Anti-Theft System (PATS) Diagnostic Trouble Codes (DTC) Index

Printable View (14 KB)

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1213	Anti-Theft Number of Programmed Keys is Below Minimum	Instrument Cluster	Go To Pinpoint Test C .
B1342	ECU is Defective	Instrument Cluster	Clear the DTCs. CARRY OUT the Instrument Cluster self-test. If DTC B1342 is retrieved, INSTALL a new instrument cluster. REFER to Section 413-01 .
B1600	PATS Key Transponder Signal is Not Received Damaged Key or Non-PATS Key	Instrument Cluster	Go To Pinpoint Test F .
B1601	PATS Received Incorrect Key-Code From Ignition Key Transponder (Unprogrammed PATS Key)	Instrument Cluster	Go To Pinpoint Test G .
B1602	PATS Received Invalid Format of Key-Code From Ignition Key Transponder (Partial Key Read)	Instrument Cluster	Go To Pinpoint Test H .
B1681	PATS Transceiver Module Signal is Not Received (Damaged, Not Connected, or Damaged Wiring)	Instrument Cluster	Go To Pinpoint Test I .
B2103	Antenna Not Connected Defective Transceiver	Instrument Cluster	Go To Pinpoint Test J .
B2139	Data Mismatch	Instrument Cluster	Go To Pinpoint Test D .
B2141	NVM Memory Failure	Instrument Cluster	Go To Pinpoint Test E .
B2431	Transponder Programming Failed	Instrument Cluster	Go To Pinpoint Test F .
B2477	Module Configuration Failure	Instrument Cluster	REFER to Section 418-01 .
U1147	SCP (J1850) Invalid or Missing Data for Vehicle Security	Instrument Cluster/PCM	Go To Pinpoint Test D .
U1262	SCP Communications BUS Fault	Instrument Cluster/PCM	REFER to Section 418-00 .

Passive Anti-Theft System (PATS) Diagnostic Trouble Codes (DTC) Descriptions

Printable View (10 KB)

Expanded Diagnostic Trouble Code (DTC) Descriptions

DTC	Expanded Description
B1213	Less than 2 keys programmed to the PATS control. Use the diagnostic card to run the self-test on the PATS functions in the instrument cluster. If DTC B1232, B1600, B1601, B1602 or B1681 are present, they must be serviced first. If DTC B1213 is the only self-test DTC, then cycle the second PATS key in the ignition to program.
B1232	Transceiver module antenna failure. Memory failure in the PCM or the instrument cluster.
B1600	No PATS key read by the PATS control. This can be caused by the PATS key, PATS transceiver, circuits between the PATS transceiver and the PATS control and/or the PATS control.
B1601	Unprogrammed PATS key. There is no issue with the PATS key itself, but the key must be programmed into the PATS memory (unless the maximum number of keys are already programmed). REFER to Spare Key Programming in this section. No parts need to be replaced for this DTC.
B1602	Partial PATS key was read. Make sure that approved PATS key (Ford, Rotunda or Strattec) is being used. Large metal objects, additional PATS keys, or devices used to purchase gasoline located on the customer's key ring can cause interference. Instruct the customer to keep such items from touching the ignition key during engine start. It is not necessary to remove the objects from the customer's key ring. Remote starter equipment can also cause this DTC. Remove any remote starter equipment close to the transceiver before conducting further diagnosis. This DTC can be caused by the PATS key or the PATS transceiver.
B1681	PATS transceiver module signal is not received by the PATS control. This DTC can be caused by circuits between the PATS transceiver and the PATS control, the PATS transceiver or the PATS control. Follow the pinpoint test for diagnosis. This can also be caused by using the incorrect transceiver part number. Make sure that the correct transceiver part number is being used.
B2103	Transceiver module antenna failure. Incorrect or nonexistent diagnostic data from the transceiver.
B2139	The PCM_ID does not match between the PCM and the PATS instrument cluster.
B2141	NVM configuration failure. PATS does not have a stored PCM_ID in memory (PATS PID PCM_ID=not STORED). If a DTC U1147 is also present, it must be repaired first. If a DTC U1262 is also present, attempt to repair the DTC. However, repair to DTC U1262 may not be required prior to repairing DTC B2141.
B2431	The ignition key (Lincoln LS only) was not programmed. This vehicle uses a special ignition key. Program a new ignition key, using the correct style key.
P1260	This DTC will be stored any time the PCM disables the vehicle because of a PATS issue. Whenever the PCM has stored DTC P1260, there should be PATS DTC(s) stored that require diagnosis.
U1147	Indicates a communication issue between the PCM and PATS instrument cluster. This DTC cannot be caused by the PATS key, the PATS transceiver or the circuits between the PATS transceiver and PATS control. Whenever PATS has the DTC U1147 stored, there should be a DTC P1260, Theft Detected-Engine Disabled, stored in the PCM. Verify that DTC P1260 is stored in the PCM. If the DTC P1260 is not stored in the PCM, there is a power up issue for the PCM. (i.e. PATS is powering up at key ON/START, but the PCM is not. Therefore, PATS tries to communicate over circuits 914 and 915 and there is no response from the PCM.) Make sure that the PCM power and ground circuits are functioning. Make sure that the diagnostic tool can communicate with the PCM.
U1262	Indicates a communication issue between the PATS control instrument cluster and some other module. Do not carry out the PATS diagnostics if a no start is not reported or if the anti-theft indicator is not flashing rapidly at key ON. If the indicator is flashing, check to make sure the PCM is

	powered up and operating. If the PCM is not powered up or operating, continue with PCM diagnostics.

Passive Anti-Theft System (PATS) Symptom Chart

Printable View (13 KB)

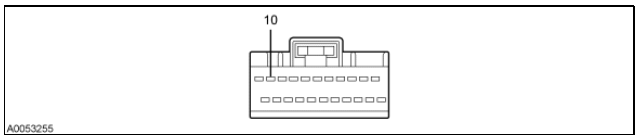
Symptom Chart

Passive Anti-Theft System (PATS) Pinpoint Tests

Printable View (153 KB)

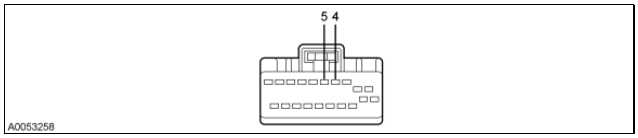
Connector Circuit Reference

Instrument Cluster C220a



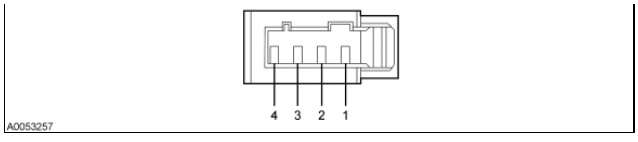
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	10-GL6 (GY/VT) transmits a signal to the anti-theft indicator	0 volts, 5 ohms or less between the instrument cluster and the anti-theft indicator. Greater than 10,000 ohms to ground with the instrument cluster and the anti-theft indicator disconnected.

Instrument Cluster C220b



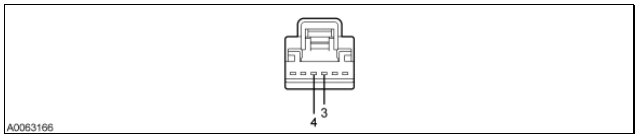
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	8-GL36 (WH/RD) transmits a signal to passive anti-theft system (PATS)	0 volts, 5 ohms or less between the instrument cluster and the PATS transceiver. Greater than 10,000 ohms to ground with the instrument cluster and the PATS transceiver disconnected.
5	10-GL36 (GY/RD) receives a signal from PATS	0 volts, 5 ohms or less between the instrument cluster and the PATS transceiver. Greater than 10,000 ohms to ground with the instrument cluster and the PATS transceiver disconnected.

Passive Anti-Theft System (PATS) C252



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-GL36 (OG/BU) voltage feed to the PATS transceiver	Greater than 10 volts with the ignition switch in the ON or OFF position.
2	31-GL36 (BK/BU) ground for the PATS transceiver	0 volts, less than 5 ohms.
3	8-GL36 (WH/RD) transmits a signal to the instrument cluster	0 volts, 5 ohms or less between the instrument cluster and the PATS transceiver. Greater than 10,000 ohms to ground with the instrument cluster and the PATS transceiver disconnected.
4	10-GL36 (GY/RD) receives a signal from the instrument cluster	0 volts, 5 ohms or less between the instrument cluster and the PATS transceiver. Greater than 10,000 ohms to ground with the instrument cluster and the PATS transceiver disconnected.

Sunload Sensor C286



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	29-GL6 (OG) anti-theft indicator voltage	12 volts, 5 ohms or less between the anti-theft indicator and the central junction box. Greater than 10,000 ohms to ground with the instrument cluster and the anti-theft indicator disconnected.
4	10-GL6 (GY/VT) receives a signal from the instrument cluster	0 volts, 5 ohms or less between the anti-theft indicator and the instrument cluster. Greater than 10,000 ohms to ground with the instrument cluster and the autolamp sensor disconnected.

Pinpoint Test A: The Anti-Theft Indicator Is Never On No 3-Second Anti-Theft Indicator Prove-out

Normal Operation

The passive anti-theft system (PATS) uses an anti-theft indicator. This indicator proves out for 3 seconds when the ignition switch is turned to the RUN or START position under normal operation. If there is a PATS concern, this indicator either flashes rapidly or glow steadily (for more than 3 seconds) when the ignition switch is turned to the RUN or START position.

Possible Causes

- no signal from the instrument cluster
- anti-theft indicator is inoperative
- instrument cluster
- circuit 10-GL6 (GY/VT) open or short to ground

- circuit 29-GL6 (OG) open or short to ground

PINPOINT TEST A: THE ANTI-THEFT INDICATOR IS NEVER ON NO 3 SECOND ANTI-THEFT INDICATOR PROVE-OUT

NOTE: Large metallic objects, electronic devices on the keychain that can be used to purchase gasoline or similar items, or a second key on the same keyring as the passive anti-theft system (PATS) key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key ring for such objects or devices.

If present, inform the customer that they need to keep these objects from touching the PATS key while starting the engine. These objects and devices cannot damage the PATS key, but can cause a momentary concern if they are too close to the key during engine start.

If a concern occurs, turn the ignition switch OFF and restart the engine with all other objects on the keyring held away from the PATS key.

Check to make sure the key used by the customer is a Ford-approved PATS key. (PATS keys from Rotunda or Strattec are approved Ford PATS keys.)

Test Step	Result / Action to Take
A1 ENTER THE INSTRUMENT CLUSTER ACTIVE COMMAND MODE	
• Key in OFF position. • Enter the instrument cluster active command mode. • **Can the instrument cluster active command mode be entered?**	**Yes** GO to A2 . **No** REFER to Section 413-01 to continue communication diagnostics.
A2 CHECK THE ANTI-THEFT INDICATOR TRIGGER THE INSTRUMENT CLUSTER ACTIVE COMMAND THEFT_LAMP TO ON	
• Trigger the instrument cluster active command THEFT_LAMP to ON. • **Does the anti-theft indicator illuminate?**	**Yes** The anti-theft indicator is OK. VERIFY the concern with the customer. **No** GO to A3 .
A3 CHECK THE INSTRUMENT CLUSTER OUTPUT TO THE ANTI-THEFT INDICATOR FOR VOLTAGE CIRCUIT 10-GL6 (GY/VT)	
• Key in OFF position. • Disconnect: Sunload Sensor C286. • Key in ON position. • While triggering the instrument cluster active command THEFT_LAMP to ON, measure the voltage between the sunload sensor C286-4, circuit 10-GL6 (GY/VT), harness side and ground.	**Yes** GO to A5 . **No** GO to A4 .

 A0063167 • **Is the voltage greater than 10 volts?**	
A4 CHECK CIRCUIT 10-GL6 (GY/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: Instrument Cluster C220a. • Measure the resistance between the instrument cluster C220a-10, circuit 10-GL6 (GY/VT), harness side and the sunload sensor C286-4, circuit 10-GL6 (GY/VT), harness side.  A0063168 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . CLEAR the DTCs. TEST the system for normal operation. PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A5 CHECK THE ANTI-THEFT INDICATOR	
• Measure the resistance between the sunload sensor C286-4 and the sunload sensor C286-3 component side.  A0062313 • **Is the resistance greater than 10,000 ohms in 1 direction and 10-20 ohms in the other direction?**	**Yes** GO to A6 . **No** INSTALL a new sunload sensor. REFER to Section 417-01 . CLEAR the DTCs. REPEAT the self-test.
A6 CHECK THE SUNLOAD SENSOR SENSOR FOR VOLTAGE CIRCUIT 29-GL6 (OG)	
• Key in OFF position. • Measure the voltage between the sunload sensor C286-3, circuit 29-GL6 (OG), and ground.	**Yes** INSTALL a new sunload sensor. REFER to Section 417-01 . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 • **Is the voltage greater than 10 volts?**	

Pinpoint Test B: The Anti-Theft System Does Not Operate Correctly The Vehicle Cranks But The Anti-Theft Indicator Flashes Rapidly At Key On

Normal Operation

The passive anti-theft system (PATS) uses an LED indicator. This indicator proves out for 3 seconds when the ignition switch is turned to RUN or START under normal operation. If there is a PATS concern, this indicator either flashes rapidly or glow steadily (for more than 3 seconds) when the ignition switch is turned to RUN or START.

Possible Causes

- instrument cluster
- instrument cluster calibration

PINPOINT TEST B: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY THE VEHICLE CRANKS BUT THE ANTI-THEFT INDICATOR FLASHES RAPIDLY AT KEY ON

Test Step	Result / Action to Take
B1 CHECK THE ANTI-THEFT INDICATOR FOR CORRECT OPERATION	
• Key in START position. • Verify the anti-theft indicator proves out correctly. • **Does the vehicle start with the anti-theft indicator flashing?**	**Yes** If the vehicle starts, VERIFY the correct powertrain control module (PCM) calibration for the vehicle. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. **No** The system is OK.

Pinpoint Test C: The Anti-Theft System Does Not Operate Correctly Anti-Theft Number Of Programmed Keys Is Below Minimum

Normal Operation

The transceiver module communicates with the passive anti-theft system (PATS) key. The control functions are contained in the instrument cluster. This instrument cluster carries out all of the PATS functions such as receiving the identification code from the PATS key and controlling engine enable. The instrument cluster initiates the key interrogation sequence when the key is inserted in the ignition switch and when the switch is turned to the START or RUN position.

Possible Causes

- less than 2 keys programmed to the system
- PATS transceiver
- unprogrammed PATS key

- instrument cluster

PINPOINT TEST C: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY ANTI-THEFT NUMBER OF PROGRAMMED KEYS IS BELOW MINIMUM

Test Step	Result / Action to Take
C1 RETRIEVE THE INSTRUMENT CLUSTER DTCS	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Retrieve and Record Continuous Instrument Cluster Codes. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. • Carry out the instrument cluster on-demand self-test. • **Is DTC B1213 the only DTC retrieved?**	**Yes** GO to C2 . **No** REPAIR the other DTCs retrieved. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. CLEAR the DTCs. REPEAT the self-test.
C2 CHECK FOR PROGRAMMED PATS KEYS MONITOR THE INSTRUMENT CLUSTER PID NUMKEYS	
• Monitor the instrument cluster PID NUMKEYS. • **Does the instrument cluster PID NUMKEYS display less than two PATS keys programmed?**	**Yes** GO to C3 . **No** The system is OK.
C3 PROGRAM PATS KEYS	
• **NOTE:** Two PATS keys must be programmed in order to start the vehicle. • Cut a new PATS key. • Key in ON position. • Program the new PATS key(s). Refer to Key Programming Using Diagnostic Equipment in this section.	**Yes** CLEAR the DTCs. CARRY OUT the self-test to verify all codes have been cleared. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** If the anti-theft indicator is on continuously, REPEAT Step C3 with a 2nd new PATS key.

• **Does the anti-theft indicator illuminate for 3 seconds and then go out?**	If the theft indicator is flashing, RETRIEVE DTC stored for new fault and REPAIR the other DTC(s) retrieved. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

Pinpoint Test D: Data Mismatch (Received Data Does Not Match What Was Expected)

Normal Operation

The transceiver module communicates with the passive anti-theft system (PATS) key. The control functions are contained in the instrument cluster. This instrument cluster carries out all of the PATS functions such as receiving the identification code from the PATS key and controlling engine enable. The instrument cluster initiates the key interrogation sequence when the key is inserted in the ignition switch and when the ignition switch is turned to the RUN or START position.

Possible Causes

- powertrain control module (PCM) calibration
- instrument cluster calibration
- instrument cluster

PINPOINT TEST D: DATA MISMATCH (RECEIVED DATA DOES NOT MATCH WHAT WAS EXPECTED)

Test Step	Result / Action to Take
D1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster DTCs. • **Is DTC B2139 or U1147 recorded?**	**Yes** GO to D2 . **No** The system is OK.
D2 CLEAR PCM ID FROM INSTRUMENT CLUSTER AND PCM	
• Carry out the security access procedure for the instrument cluster. Refer to Anti-Theft Security Access in this section. • **NOTE:** DO NOT carry out the ignition key code erase. • Select PARAMETER RESET command for the instrument cluster. • Use the diagnostic tool for PCM active command KEEP ALIVE MEMORY RESET. • Key in OFF position.	**Yes** VERIFY PCM calibration is correct for the vehicle. If correct, INSTALL a new instrument cluster. REFER to Section 413-01 . TEST the system for normal operation. Program 2 keys. REFER to Key Programming Using Diagnostic Equipment in this section. REPEAT Pinpoint Test D . CLEAR the DTCs. REPEAT the self-test. If DTC B2139 or U1147 still exists, INSTALL a new PCM. REFER to Section 303-14 . TEST the system for normal operation. If the vehicle is equipped with the valet feature, program the 3rd PATS key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** The system is OK. CHECK for any other DTCs. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

• Key in the ON position for 3 seconds. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. • Key in OFF position. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Retrieve Continuous Codes. • **Is DTC B2139 or U1147 retrieved?**	

Pinpoint Test E: The Anti-Theft System Does Not Operate Correctly NVM Configuration Failure (No PCM ID Exchanged Between The Instrument Cluster And The PCM)

Normal Operation

The powertrain control module (PCM) and instrument cluster verify correct PATS operation through the standard corporate protocol (SCP) network when the ignition switch is turned to the RUN position.

Possible Causes

- instrument cluster

PINPOINT TEST E: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY NVM CONFIGURATION FAILURE (NO PCM ID EXCHANGED BETWEEN THE INSTRUMENT CLUSTER AND THE PCM)

Test Step	Result / Action to Take
E1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster continuous and on demand self-test DTCs. • **Is DTC B2141 retrieved?**	**Yes** GO to E2 . **No** The system is OK.
E2 CARRY OUT THE KEEP ALIVE MEMORY RESET FROM THE PCM	
• Use the diagnostic tool for PCM active command KEEP ALIVE	**Yes** GO to E3 . **No** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

MEMORY RESET. • **Did the keep alive memory reset occur?**	
E3 TRANSFER THE PCM ID	
• Key in OFF position. • Key in the ON position. Leave the key in the ON position for 30 seconds. • Key in OFF position. • Key in START position. • **Does the vehicle START?**	**Yes** The system is OK. **No** GO to E4 .
E4 RETRIEVE THE INSTRUMENT CLUSTER DTCS	
• Enter the following diagnostic mode on the diagnostic tool: Clear Instrument Cluster Continuous Codes. • Key in OFF position. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Retrieve Instrument Cluster Continuous Codes. • **Is DTC B2141 retrieved?**	**Yes** REPEAT Step E2. If the fault persists, VERIFY the PCM calibration. If the calibration is OK, INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the module. CLEAR the DTCs. REPEAT the self-test. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

Pinpoint Test F: The Anti-Theft System Does Not Operate Correctly The PATS Ignition Key Transponder Signal Is Not Received Or The Transponder Programming Failed (Damaged Key Or Non-PATS Key)

Normal Operation

The transceiver module communicates with the passive anti-theft system (PATS) key. The control functions are contained in the instrument cluster. The instrument cluster carries out all of the PATS functions such as

receiving the identification code from the PATS key and controlling starter enable. The instrument cluster initiates the key interrogation sequence when the key is inserted in the ignition lock cylinder and when the ignition switch is turned to the RUN or START position.

Possible Causes

- instrument cluster
- PATS transceiver
- PATS key

PINPOINT TEST F: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY THE PATS IGNITION KEY TRANSPONDER SIGNAL IS NOT RECEIVED OR THE TRANSPONDER PROGRAMMING FAILED (DAMAGED KEY OR NON-PATS KEY)

NOTE: Large metallic objects, electronic debit transponder devices or a 2nd key on the same key ring as the passive anti-theft system (PATS) key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices.

If present, inform the customer that they need to keep these objects from touching the PATS key while starting the engine. These objects and devices cannot damage the PATS key, but can cause a momentary problem if they are too close to the key during engine start.

If a problem occurs, turn the ignition switch OFF and restart the engine with all other objects on the key ring held away from the PATS key.

Check to ensure the PATS key used by the customer is an approved Ford PATS key (PATS keys from Rotunda or Strattec are approved Ford PATS keys).

Test Step	Result / Action to Take
F1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster continuous and on-demand self-test DTCs. • **Is DTC B1600 or B2431 retrieved?**	**Yes** GO to F2 . **No** If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index. If no DTCs are retrieved, system is OK.
F2 PROGRAM A NEW PATS KEY	
• Key in OFF position. • **NOTE:** Check to make sure the customer and replacement PATS keys are approved Ford encoded PATS keys. Unapproved PATS keys do not always operate correctly over different temperature ranges (PATS keys from Rotunda or Strattec are approved PATS keys). • Cut a new PATS key. • Key in ON position.	**Yes** GO to F3 . **No** If no other DTCs are retrieved, the system is OK. If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.

• Program the new PATS key. Refer to Key Programming Using Diagnostic Equipment in this section. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. Carry out the instrument cluster self-test. • **Is DTC B1600 or B2431 still present?**	
F3 INSTALL A NEW PATS TRANSCEIVER	
• Key in OFF position. • Install a new PATS transceiver. Refer to Passive Anti-Theft System (PATS) Transceiver in this section. • **NOTE:** Use the customer's original PATS key, not the PATS key that was cut in the previous step. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. Carry out the instrument cluster self-test. • **Is DTC B1600 or B2431 retrieved?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . TURN the ignition switch to ON using 2 PATS keys. Go To Pinpoint Test D to initialize the module. CLEAR the DTCs. REPEAT the self-test. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** The system is OK.

Pinpoint Test G: The Anti-Theft System Does Not Operate Correctly PATS Received An Incorrect Key-Code From The Ignition Key Transponder (Unprogrammed PATS Key)

Normal Operation

During each key insertion and vehicle start sequence, the instrument cluster and the transceiver module reads the passive anti-theft system (PATS) key identification code.

Possible Causes

- PATS transceiver
- instrument cluster
- PATS key

PINPOINT TEST G: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY PATS RECEIVED AN INCORRECT KEY-CODE FROM THE IGNITION KEY TRANSPONDER (UNPROGRAMMED PATS KEY)

NOTE: Large metallic objects, electronic debit transponder devices or a 2nd key on the same key ring as the passive anti-theft system (PATS) key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices.

If present, inform the customer that they need to keep these objects from touching the PATS key while starting the engine. These objects and devices cannot damage the PATS key, but can cause a momentary problem if they are too close to the key during engine start.

If a problem occurs, turn ignition switch OFF and restart the engine with all other objects on the key ring held away from the PATS key.

Check to ensure the PATS key used by the customer is an approved Ford PATS key (PATS keys from Rotunda or Strattec are approved Ford PATS keys).

Test Step	Result / Action to Take
G1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster continuous and on-demand self-test DTCs. • **Is DTC B1601 recorded?**	**Yes** GO to G2 . **No** The system is OK. CHECK all customer PATS keys with instrument cluster self-test to verify all other PATS keys are programmed.
G2 CHECK FOR PROGRAMMED PATS KEYS MONITOR THE INSTRUMENT CLUSTER PID NUMKEYS	
• Monitor the instrument cluster PID NUMKEYS. • **Does the instrument cluster PID NUMKEYS display 8?**	**Yes** ERASE and PROGRAM the key codes. REFER to Key Programming Using Diagnostic Equipment in this section. CLEAR the DTCs. REPEAT the self-test. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** GO to G3 .
G3 CHECK THE NUMBER OF PROGRAMMED PATS KEYS AVAILABLE	
• Verify there are at least 2 currently programmed PATS keys available with the vehicle. • **Are at least 2 currently programmed PATS keys available with the vehicle?**	**Yes** GO to G4 . **No** CUT new PATS key(s) so that at least 2 PATS keys are available. PROGRAM the PATS keys. REFER to Key Programming Using Diagnostic Equipment in this section. GO to G4 .
G4 VERIFY THE INSTRUMENT CLUSTER PID SPARE_KY INDICATES ENABLE	
• Monitor the instrument cluster PID SPARE_KY. • **Does the instrument cluster PID SPARE_KY indicate enable?**	**Yes** GO to G5 . **No** ENABLE the PID SPARE KEY to the enable setting. REFER to Key Programming Using Two Programmed Keys in this section. CLEAR the DTCs. REPEAT the self-test. Once completed, GO to G5 .
G5 CHECK THE PATS KEYS FOR CORRECT OPERATION	
• Key in OFF position.	**Yes** The system is OK. If there are additional keys that need to be

• Start the vehicle using the first PATS key. • Start the vehicle with the second PATS key. • Key in OFF position. • **Does the vehicle start correctly using both PATS keys?**	programmed, REFER to Key Programming Using Two Programmed Keys in this section. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** GO to G6 .
G6 RETRIEVE THE INSTRUMENT CLUSTER DTCS CHECK FOR DTC B1601	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve Instrument Cluster Continuous Codes. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. • Carry out the instrument cluster self-test using both PATS keys from Step G5. • **Is DTC B1601 retrieved?**	**Yes** INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the vehicle. CLEAR the DTCs. REPEAT the self-test. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. **No** The system is OK. If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.

Pinpoint Test H: The Anti-Theft System Does Not Operate Correctly Passive Anti-Theft System (PATS) Received Invalid Format Of Key-Code From The PATS Key Transponder (Partial Key Read)

Normal Operation

During each key insertion and vehicle start sequence, the instrument cluster and the transceiver module reads the passive anti-theft system (PATS) key identification code.

Possible Causes

- PATS key
- PATS transceiver

PINPOINT TEST H: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY PASSIVE ANTI-THEFT SYSTEM (PATS) RECEIVED INVALID FORMAT OF KEY-CODE FROM PATS KEY TRANSPONDER (PARTIAL KEY READ)

NOTE: Large metallic objects, electronic debit transponder devices, or a 2nd key on the same key ring as the passive anti-theft system (PATS) key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices.

If present, inform the customer that they need to keep these objects from touching the PATS key while starting the engine. These objects and devices cannot damage the PATS key, but can cause a momentary problem if they are too close to the key during engine start.

If a problem occurs, turn the ignition switch OFF and restart the engine with all other objects on the key ring held away from the PATS key.

Check to ensure the PATS key used by the customer is an approved Ford PATS key (PATS keys from Rotunda or Strattec are approved Ford PATS keys).

Test Step	Result / Action to Take
H1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster continuous and on-demand self-test DTCs. • **Is DTC B1602 retrieved?**	**Yes** GO to H2 . **No** The system is OK. CHECK all customer PATS keys with instrument cluster self-test to verify all other PATS keys are programmed.
H2 OBTAIN A NEW PATS KEY	
• Key in OFF position. • Cut a new PATS key. • Key in ON position. • Program a new PATS key. Refer to Key Programming Using Diagnostic Equipment in this section. • Carry out the instrument cluster self-test. • **Is DTC B1602 retrieved?**	**Yes** GO to H3 . **No** The system is OK.
H3 INSTALL A NEW PATS TRANSCEIVER	
• Key in OFF position. • Install a new PATS transceiver. Refer to Passive Anti-Theft System (PATS) Transceiver in this section. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. Carry out the instrument cluster self-test. • **Are any DTCs retrieved?**	**Yes** REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index. **No** The system is OK.

Pinpoint Test I: The Anti-Theft System Does Not Operate Correctly Passive Anti-Theft System (PATS) Transceiver Signal Is Not Received (Not Connected, Damaged, Or Wiring)

Normal Operation

During each key insertion and vehicle start sequence, the instrument cluster and the transceiver module reads the passive anti-theft system (PATS) key identification code.

Possible Causes

- PATS transceiver
- instrument cluster
- PATS key
- circuit 29S-GL36 (OG/BU) open or short to ground
- circuit 31-GL36 (BK) open or short to voltage

- circuit 10-GL36 (GY/RD) open or short to ground
- circuit 8-GL36 (WH/RD) open or short to ground

PINPOINT TEST I: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY PASSIVE ANTI-THEFT SYSTEM (PATS) TRANSCEIVER SIGNAL IS NOT RECEIVED (NOT CONNECTED, DAMAGED, OR WIRING)

Test Step	Result / Action to Take
I1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Use the recorded instrument cluster continuous and on-demand self-test DTCs. • **Is DTC B1681 retrieved?**	**Yes** GO to I2 . **No** The system is OK.
I2 INSPECT THE PATS TRANSCEIVER FOR CORRECT INSTALLATION	
• Key in OFF position. • Verify the PATS transceiver is correctly installed. Refer to Passive Anti-Theft System (PATS) Transceiver in this section. • **Was the transceiver correctly installed?**	**Yes** GO to I3 . **No** Correct the installation. CLEAR the DTCs. REPEAT the self-test.
I3 CHECK THE PATS TRANSCEIVER FOR VOLTAGE CIRCUIT 29S-GL36 (OG/BU)	
• Key in OFF position. • Disconnect: PATS Transceiver C252. • Key in ON position. • Measure the voltage between the PATS transceiver C252-1, circuit 29S-GL36 (OG/BU), harness side and ground.  A0003898 • **Is the voltage greater than 9 volts?**	**Yes** GO to I4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
I4 CHECK THE PATS TRANSCEIVER GROUND CIRCUIT 31-GL36 (BK)	
• Key in OFF position. • Measure the resistance between the PATS transceiver C252-2, circuit 31-GL36 (BK), harness side and ground.	**Yes** GO to I5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 A0003899 • **Is the resistance less than 5 ohms?**	
I5 CHECK THE PATS TRANSCEIVER RECEIVE CIRCUIT FOR VOLTAGE CIRCUIT 10-GL36 (GY/RD)	
• Connect: PATS Transceiver C252. • Key in ON position. • Measure the voltage by back-probing between the PATS transceiver C252-4, circuit 10-GL36 (GY/RD), harness side and ground.  A0003900 • **Is the voltage greater than 9 volts?**	**Yes** GO to I7 . **No** GO to I6 .
I6 CHECK THE PATS TRANSCEIVER RECEIVE CIRCUIT FOR A SHORT TO GROUND CIRCUIT 10-GL36 (GY/RD)	
• Key in OFF position. • Disconnect: PATS Transceiver C252. • Measure the resistance between the PATS transceiver C252-4, circuit 10-GL36 (GY/RD), harness side and ground.  A0003901 • **Is the resistance greater than 100 ohms?**	**Yes** GO to I7 . **No** CHECK circuit 10-GL36 (GY/RD) for a short to ground with the instrument cluster disconnected. If the circuit is OK, INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the module. CLEAR the DTCs. TEST the system for normal operation. If the circuit is not OK, REPAIR circuit 10-GL36 (GY/RD). CLEAR the DTCs. REPEAT the self-test. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section.
I7 CHECK CIRCUIT 10-GL36 (GY/RD) FOR AN OPEN	

• Key in OFF position. • Disconnect: PATS Transceiver C252. • Disconnect: Instrument Cluster C220b. • Measure the resistance between the PATS transceiver C252-4, circuit 10-GL36 (GY/RD), harness side and the instrument cluster C220b-5, circuit 10-GL36 (GY/RD), harness side.  A0003902 • **Is the resistance less than 5 ohms?**	**Yes** GO to I8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
I8 CHECK THE PATS TRANSCEIVER TRANSMIT CIRCUIT FOR VOLTAGE CIRCUIT 8-GL36 (WH/RD)	
• Key in OFF position. • Connect: PATS Transceiver C252. • Connect: Instrument Cluster C220b. • Key in ON position. • Measure the voltage by back-probing between the PATS transceiver C252-3, circuit 8-GL36 (WH/RD), harness side and ground.  A0003903 • **Is the voltage greater than 9 volts?**	**Yes** GO to I10 . **No** GO to I9 .
I9 CHECK THE PATS TRANSCEIVER TRANSMIT CIRCUIT FOR AN OPEN CIRCUIT 8-GL36 (WH/RD)	
• Key in OFF position. • Disconnect: PATS Transceiver C252. • Measure the resistance between the PATS transceiver C252-3, circuit 8-GL36 (WH/RD), harness side and ground.  A0003904 • **Is the resistance greater than 100 ohms?**	**Yes** GO to I10 . **No** CHECK circuit 8-GL36 (WH/RD) for short to ground with the instrument cluster disconnected. If the circuit is OK, INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the module. TEST the system for normal operation. If the vehicle is equipped with the valet feature, program the

	3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. If the circuit is not OK, REPAIR circuit 8-GL36 (WH/RD). CLEAR the DTCs. REPEAT the self-test.
I10 CHECK THE PATS TRANSMIT CIRCUIT FOR CORRECT OPERATION CIRCUIT 8-GL36 (WH/RD)	
• Connect: PATS Transceiver C252. • Trigger the instrument cluster active command RF_ SIGNAL to ON while measuring the voltage by back probing between the PATS transceiver C252-3, circuit 8-GL36 (WH/RD), harness side and ground.  A0003903 • **Does the voltage drop from greater than 9 volts to less than 1 volt when the instrument cluster active command RF_ SIGNAL is triggered ON?**	**Yes** GO to I11 . **No** CHECK circuit 8-GL36 (WH/RD) for an open between the instrument cluster C220b-4 and PATS transceiver C252-3. If the circuit is OK, INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the module. TEST the system for normal operation. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. If the circuit is not OK, REPAIR circuit 8-GL36 (WH/RD). CLEAR the DTCs. REPEAT the self-test.
I11 CHECK THE PATS SYSTEM WITH A NEW PATS TRANSCEIVER INSTALLED	
• Key in OFF position. • Install a new PATS transceiver. Refer to Passive Anti-Theft System (PATS) Transceiver in this section. • Key in ON position. • Carry out the instrument cluster self-test. • **Is DTC B1681 retrieved?**	**Yes** GO to I12 . **No** The system is OK.
I12 CHECK THE PATS SYSTEM WITH A NEW INSTRUMENT CLUSTER	
• Key in OFF position. • Install a new instrument cluster. Refer to Section 413-01 . Cycle the key to ON using two PATS keys. Program the keys. Refer to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test	**Yes** REPAIR circuits 8-GL36 (WH/RD), 10-GL36 (GY/RD), 29S-GL36 (OG/BU), and 31-GL36 (BK). CLEAR the DTCs. REPEAT the self-test. **No** If no DTCs are retrieved, the system is OK.

D to initialize the module. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear Continuous Codes. • Carry out the instrument cluster self-test. • **Is DTC B1681 retrieved?**	

Pinpoint Test J: The Anti-Theft System Does Not Operate Correctly Antenna Not Connected Or Defective Transceiver

Normal Operation

During each key insertion and vehicle start sequence, the instrument cluster and the transceiver module reads the passive anti-theft system (PATS) key identification code.

Possible Causes

- PATS transceiver

PINPOINT TEST J: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY ANTENNA NOT CONNECTED OR DEFECTIVE TRANSCEIVER

Test Step	Result / Action to Take
J1 INSPECT THE PASSIVE ANTI-THEFT SYSTEM (PATS) TRANSCEIVER FOR CORRECT INSTALLATION	
• Key in OFF position. • Verify the PATS transceiver is correctly installed. REFER to Passive Anti-Theft System (PATS) Transceiver in this section. • Carry out the instrument cluster self-test. • **Is DTC B2103 retrieved?**	**Yes** INSTALL a new PATS transceiver module. REFER to Passive Anti-Theft System (PATS) Transceiver in this section. CLEAR the DTCs. REPEAT the self-test. **No** The system is OK.

Pinpoint Test K: The Vehicle Does Not Start The Anti-Theft Indicator Does Not Prove Out And Flashes Rapidly

Normal Operation

During each key insertion and vehicle start sequence, the instrument cluster and the transceiver module reads the passive anti-theft system (PATS) key identification code.

Possible Causes

- PATS transceiver
- instrument cluster
- PATS key

PINPOINT TEST K: THE VEHICLE DOES NOT START THE ANTI-THEFT INDICATOR DOES NOT PROVE OUT AND FLASHES RAPIDLY

Test Step	Result / Action to Take
K1 RECORD THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
• Key in ON position. • Carry out the instrument cluster self-test. • Use the recorded instrument cluster self-test. • **Is instrument cluster DTC B1213, B1600, B1601, 1602, B1681, B2103, B2139, B2141, B2431 or U1147 retrieved?**	**Yes** REPAIR the instrument cluster DTC. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. CLEAR the DTCs. REPEAT the self-test. **No** GO to K2 .
K2 CHECK FOR ANTI-THEFT INDICATOR FLASHING FAULT CODE SEQUENCE 16	
• **NOTE:** The sequence 1-6 will repeat itself. • Check for flashing fault code 16 on the anti-theft indicator. • **When turning key to RUN, does the anti-theft indicator flash rapidly for one minute, pause briefly, flash 1 time, pause briefly and then flash 6 times?**	**Yes** GO to K3 . **No** CHECK for other no-start fault.
K3 CARRY OUT PCM DIAGNOSTICS	
• Carry out diagnostics on the powertrain control module (PCM) module. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. • **Does a PCM module concern exist?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new instrument cluster. REFER to Section 413-01 . PROGRAM the keys. REFER to Key Programming Using Diagnostic Equipment in this section. Go To Pinpoint Test D to initialize the module. TEST the system for normal operation. If the vehicle is equipped with the valet feature, program the 3rd key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming Using Two Programmed Keys in this section.

Key Programming Using Two Programmed Keys

Printable View (10 KB)

NOTE: This procedure only works if 2 or more programmed ignition keys are available and it is desired to program additional key(s). If 2 keys are not available, follow the procedure in Key Programming Using Diagnostic Equipment in this section.

NOTE: PID SPARE_KY must be enabled for this procedure to operate. If this PID is not enabled, follow the security access procedure, refer to Anti-Theft Security Access in this section and select SPARE KEY PROGRAMMING SWITCH: ENABLED.

NOTE: If the programming procedure is successful, the new key(s) start the vehicle and the THEFT indicator illuminates for approximately 3 seconds.

NOTE: If the programming procedure is not successful, the new key(s) will not start the vehicle and the THEFT indicator flashes. If the programming procedure was not successful, leave the ignition switch in the RUN position for at least 30 seconds then repeat the key programming procedure from Step 1. If the failure repeats, refer to Diagnosis and Testing to review the DTCs and carry out pinpoint tests as necessary.

NOTE: A maximum of 8 ignition keys can be programmed to a passive anti-theft system (PATS) equipped vehicle. If more are needed, refer to Unlimited Key Mode Programming in this section.

NOTE: If the steps are not carried out as described, the programming procedure ends.

NOTE: Ignition keys must have correct mechanical key cut for the vehicle and must be the correct PATS encoded key for the vehicle.

NOTE: If the vehicle is in unlimited key mode, this spare programming procedure still functions. Any 2 keys that can start the vehicle may be used to program in an additional unlimited key.

1. Insert a programmed ignition key into the ignition lock cylinder and turn the ignition switch from OFF to RUN (maintain the ignition switch in RUN for 3 seconds but not longer than 10 seconds).
2. Turn the ignition switch to OFF and remove the first key from the ignition lock cylinder.
3. Within 10 seconds of turning the ignition switch to OFF, insert a 2nd programmed ignition key into the ignition lock cylinder and turn the ignition switch from OFF to RUN (maintain the ignition switch in RUN for 3 seconds but not longer than 10 seconds).
4. Turn the ignition switch to OFF and remove the 2nd key from the ignition lock cylinder.
5. Within 20 seconds of turning the ignition lock cylinder to OFF, insert the unprogrammed ignition key (new key) into the ignition lock cylinder and turn the ignition switch from OFF to RUN (attempt to start the vehicle).
6. If it is desired to program additional key(s), repeat the key programming procedure from the beginning.

Key Programming Using Diagnostic Equipment

Printable View (16 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

NOTE: This procedure is used when a customer needs keys programmed into the system and does not have 2 programmed ignition keys available. This procedure is also useful when programmed ignition key(s) have been lost or a new ignition switch assembly as been installed, and it is desired to erase key(s) from the passive anti-theft system (PATS) memory.

NOTE: This procedure erases all programmed ignition keys from the vehicle memory and the vehicle will not start until 2 keys have been reprogrammed to the vehicle.

NOTE: Two PATS encoded keys with the correct mechanical cut must be available to carry out this procedure. 1 or both of them may be the customer's original keys.

NOTE: If additional keys are to be programmed, refer to Key Programming Using Two Programmed Keys in this section. If the remaining keys are with the customer and are not available with the vehicle, then instruct the customer to refer to the Owner's Guide under the "Programming Spare (SecuriLock ® North America, Safeguard ® U.K. or PATS for all other markets) Keys Procedure" for instructions on programming the remaining keys.

1. Turn the ignition switch from OFF to RUN.
2. Using the diagnostic tool, follow the SECURITY ACCESS to obtain security access for the instrument cluster. For additional information, refer to Anti-Theft Security Access in this section.
3. From the diagnostic tool menu, select IGNITION KEY CODE ERASE.
4. Select RESET SERVICE BIT, if applicable.
5. **NOTE:** Do NOT select any additional commands from this menu.

   Turn the ignition switch to OFF and disconnect the diagnostic tool.
6. Insert the first encoded key into the ignition lock cylinder and turn the ignition switch to RUN for 3 seconds.
7. Insert the 2nd encoded key into the ignition lock cylinder and turn the switch to the RUN position for 3 seconds.
8. Remove the 2nd encoded key from the ignition lock cylinder.
9. The vehicle should now start with both ignition keys.

Key Programming Switch State Control

Printable View (19 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

NOTE: The spare key programming switch is a diagnostic tool programmable switch which provides the capability to enable/disable the customer spare key programming procedure. This procedure is in the Owner's Literature spare key programming procedure and in this section under Key Programming Using Two Programmed Keys in this section. This programmable switch is provided as a convenience for customers who may not want the spare key programming procedure available to the vehicle driver.

NOTE: The spare key programming switch state can be viewed by instrument cluster PID SPARE_KY.

1. Insert a programmed ignition key into the ignition lock cylinder and turn the ignition switch to RUN.

2. Using the diagnostic tool select instrument cluster from the menu. Select SECURITY ACCESS to obtain security access. For additional information, refer to Anti-Theft Security Access in this section.

3. **NOTE:** The default setting on delivery of all new vehicles is <ENABLE>.

   From the diagnostic tool menu, select SPARE KEY PROGRAMMING SWITCH selection to desired setting:
   <ENABLE> Spare key programming procedure is accessible.
   <DISABLE> spare key programming procedure is not accessible.

Unlimited Key Mode Programming

Enabling Unlimited Key Mode

NOTE: Unlimited Key Mode is intended for use by those fleet customers who need more than 8 keys for their vehicle.

4. The customer must choose a 8-digit, non-00,00,00,00 number that will be programmed to all of their vehicles. All customer vehicles need to use the same number. Valid digits are 0-9 plus the letters A-F.

5. Note: If the instrument cluster PID: UNLIMITED TRANSPONDER KEY ID is not displayed on screen, Unlimited Key Mode is turned on, and must be turned off before viewing the stored code. To view/change the stored code, follow the procedure for turning off Unlimited Key Mode below. Check the PID: UNLIMITED TRANSPONDER KEY ID and compare its value against the code chosen in Step 1.

6. Using the diagnostic tool, select instrument cluster from the menu. Follow SECURITY ACCESS to obtain security access. For additional information, refer to Anti-Theft Security Access in this section.

7. Turn OFF the unlimited key mode to view the security key PID.
8. If the Unlimited Transponder Security Key PID was 00,00,00,00, select Active Command: SET UNLIMITED TRANSPONDER KEY. Enter the 8-digit code chosen by the user.
9. Select: ENABLE UNLIMITED KEY MODE/RESET SERVICE BIT, if applicable.
10. Select: IGNITION CODE ERASE.
11. Disconnect the diagnostic tool and turn the ignition keys off.
12. Program in 2 ignition keys to enable the vehicle by cycling keys from OFF to RUN.
13. Program any additional keys using either Key Programming Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section.

Disabling Unlimited Key Mode

1. Using a diagnostic tool, select instrument cluster from the menu. Follow SECURITY ACCESS to obtain security access. For additional information, refer to Anti-Theft Security Access in this section.
2. Select: DISABLE UNLIMITED KEY MODE.
3. Select: IGNITION KEY CODE ERASE and RESET SERVICE BIT, if applicable.
4. Disconnect the diagnostic tool and turn the ignition switch to OFF.
5. Program in 2 keys to enable the vehicle.
6. Program any additional keys using either Key Programming Using Two Programmed Keys or Key Programming Using Diagnostic Equipment in this section.

Anti-Theft Security Access

Printable View (16 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

NOTE: The security access procedure is utilized to obtain passive anti-theft system (PATS) security access. PATS security access must be granted to erase ignition keys, enable/disable unlimited key mode, and enable/disable the spare key programming switch (PID SPARE_KEY). The security access procedure invokes an inherent 10 minute time delay prior to granting security access during which the diagnostic tool must remain connected to the vehicle. Once security access has been granted, a security access command menu is displayed which offers various command options.

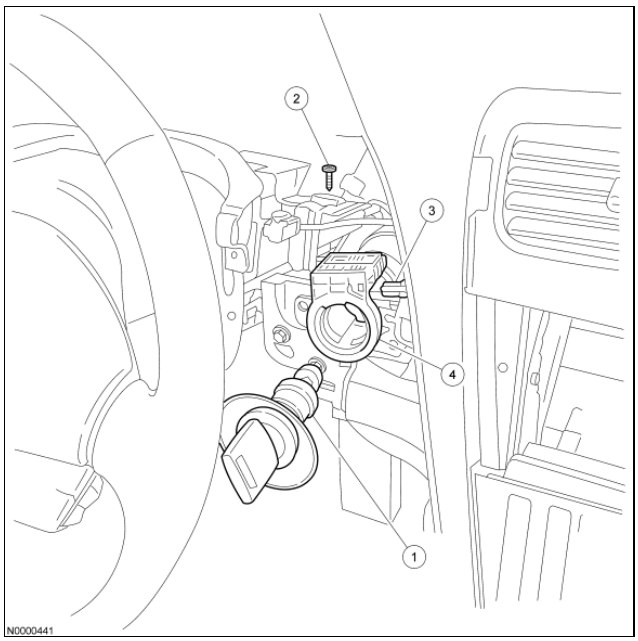
NOTE: Once security access has been granted, multiple security access commands should be executed (if necessary) prior to exiting the command menu. This avoids the carrying out of an additional security access procedure and the associated 10 minute time delay.

1. From the diagnostic tool select instrument cluster. Select SECURITY ACCESS. This procedure will take 10 minutes to carry out, during which the ignition switch must be in RUN and the diagnostic tool must be connected to the vehicle.

2. After the 10 minute security access procedure has been completed, a new menu is displayed with command options. Select only those functions necessary before exiting out of this menu. Once exited out of this menu, the security access procedure must be repeated again to carry out additional commands.

Passive Anti-Theft System (PATS) Transceiver

Printable View (119 KB)



Item	Part Number	Description
1	1153	Ignition lock cylinder
2		PATS transceiver screw
3	14401	PATS tranceiver electrical connector (part of 14401)
4	15607	PATS transceiver

Removal and Installation

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Remove the instrument cluster finish panel. For additional information, refer to Section 501-12 .
3. Turn the key to the RUN position.
4. Using a suitable tool, push the tab on the cylinder housing and remove the ignition lock cylinder.
5. Remove the PATS transceiver screw.
6. Position the transceiver ring toward the steering column to access the electrical connector.
7. Disconnect the electrical connector and remove the PATS transceiver.
8. To install, reverse the removal procedure.

Universal Transmitter

Printable View (7 KB)

The HomeLink® universal transmitter is an integral part of the left hand sun visor assembly. This universal transmitter provides a convenient way to substitute up to 3 hand-held transmitters with a single built-in device. The transmitter will learn the radio frequency codes of most current transmitters to operate garage doors, entry gates, security systems, and home or office lighting.

Universal Transmitter

Printable View (18 KB)

Refer to Wiring Diagrams Cell 89 , Courtesy Lamps for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
• Damaged universal transmitter • Damaged receiver

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and GO to Symptom Chart .

Symptom Chart

Symptom Chart
Pinpoint Test A: The Universal Transmitter Is Inoperative

Normal Operation

The HomeLink® universal transmitter is integral to the left sun visor assembly. Under normal operation the HomeLink® universal transmitter can be programmed to operate up to 3 garage doors, entry gates, security systems, and home or office lighting. Voltage is provided to the vanity mirror through circuit 29S-LB16 (OG/GN). Circuit 31-LB16 (BK) supplies the vanity mirror ground.

Possible Causes

- circuit 29S-LB16 (OG/GN) open or short to ground
- circuit 31-LB16 (BK) open
- receiver unit
- HomeLink® universal transmitter

PINPOINT TEST A: THE UNIVERSAL TRANSMITTER IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK THE LEFT VANITY MIRROR OPERATION	
• Check the illumination of the left sun visor vanity mirror lamps. • **Do the vanity mirror lamps illuminate?**	**Yes** GO to A2 . **No** Section 417-02 .
A2 PROGRAM A HAND-HELD TRANSMITTER INTO A UNIVERSAL TRANSMITTER	
• **NOTE:** If the garage door is equipped with rolling codes, REFER to Universal Transmitter Programming in this section. • Program the universal transmitter. REFER to Universal Transmitter Programming in this section. • **Did the universal transmitter program successfully?**	**Yes** The universal transmitter is OK. VERIFY the receiver operates correctly. **No** INSTALL a new left sun visor assembly. TEST the system for normal operation.

Universal Transmitter Programming

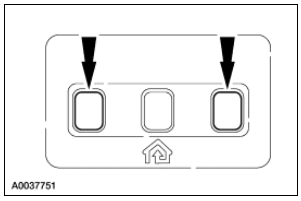
Printable View (25 KB)

⚠ WARNING: A garage door opening system that cannot stop or reverse itself after detecting an object in its path does not meet current federal safety standards. To decrease the risk of serious injury or death, do not use this HomeLink® universal transmitter with a door opening system that lacks stop and reverse features as required by federal standards. This includes any garage door opening system manufactured before April 1, 1982.

1. **⚠ CAUTION: During this procedure, the system that you are programming will be made to operate. Make sure that people and objects are clear of the garage door or gate being programmed.**

   Verify the hand-held transmitter is operative.

2. Prepare for programming the universal transmitter by erasing all 3 channels by holding down the 2 outside buttons until the red light begins to flash (20-30 seconds). Release both buttons.

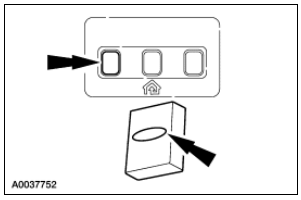


3. Select one of the 3 universal transmitter channels to be programmed by pressing the desired button.

4. Hold the end of the hand-held transmitter 25-51 mm (1-2 inches) from the front surface of the universal transmitter so that the red light can still be seen.

5. **NOTE:** For Canadian vehicles only: during programming, the hand-held transmitter may automatically stop transmitting after 2 seconds, which may not be long enough to program the universal transmitter. If programming this type of hand-held transmitter, continue to hold the button on the universal transmitter while re-pressing the hand-held transmitter button every 2 seconds.

   Use both hands to press the hand-held transmitter button and the desired button on the universal transmitter. Do not release either button.



6. Hold down both buttons until the red light on the universal transmitter flashes, first slowly and then rapidly. Release both buttons when the rapid flashing begins. The universal transmitter has successfully learned the new frequency signal and can be used in place of the hand-held transmitter(s).

7. **NOTE:** If the hand-held transmitter appears to program the universal transmitter, but does not open the garage door, the garage door opener may have a code protected or rolling code feature.

To operate, simply press the appropriate button on the universal transmitter. The red light is on while the signal is being transmitted.

Training a Garage Door Opener Equipped With Rolling Codes

8. Program the hand-held transmitter to the universal transmitter. For additional information, refer to Universal Transmitter Programming in this section.

9. Train the garage door opener receiver to recognize the universal transmitter.
    1. Remove the cover panel from the garage door opener receiver.
    2. The locate the training button on the garage door opener receiver. Location and color of the button may vary by garage door opener manufacturer. Refer to the garage door opener instruction manual or owner literature.
    3. Press the training button on the garage door opener receiver for 1-2 seconds.
    4. Press the programmed universal transmitter button for as long as the universal transmitter red light flashes (1-2 seconds). Release the button and re-press the button to confirm that the universal transmitter is trained to the receiver.
    5. The garage door opener should recognize the universal transmitter.

Erasing Channels

1. **NOTE:** Individual channels cannot be erased, but can be reprogrammed using the procedures for programming. For additional information, refer to Universal Transmitter Programming in this section.

    To erase all 3 programmed channels, hold down the 2 outside buttons until the red light begins to flash (20-30 seconds). Release both buttons.

Navigation System

Printable View (7 KB)

The vehicle navigation system audibly and visually guides the user to any entered destination. The system utilizes a global positioning system (GPS) antenna, a vehicle speed input and other sensor information to accurately establish the vehicle position. The navigation system module carries out all route calculations and sends the digital versatile disc (DVD) vector map information to the audio unit. The audio unit provides visual and audible instructions of the maneuvers required to arrive at the pre-entered destination.

Navigation System

Printable View (477 KB)

Refer to Wiring Diagrams Cell 32 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

Navigation System

The navigation system module controls the operation and the interface between the user, the vehicle subsystems, and the external components. The navigation system module is on the standard corporate protocol (SCP) network and can be diagnosed with a diagnostic tool. Communication through the controller area network (CAN) utilizes data transmitted and received between the navigation system module and the audio unit to control the video screen display through the video interface circuits.

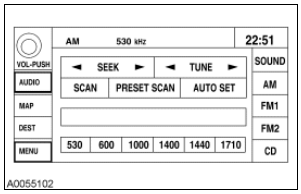
The vehicle navigation system guides the user to a pre-entered destination. A map DVD stored in the navigation system module sends route calculation data to the audio unit. The audio unit audibly and visually instructs the user of the maneuvers required to arrive at the destination entered.

A voice recognition system allows the user to interface with the system without using the touch screen. A microphone located in the rear view mirror provides a direct input to the navigation system module.

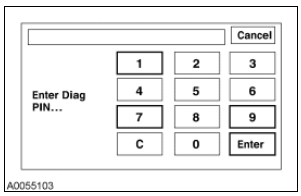
The navigation system module uses the GPS antenna, vehicle speed, and other internal sensor information to accurately establish vehicle position. In order to calculate the initial vehicle position, the GPS antenna is used to track several available satellites simultaneously. The GPS antenna only receives data and does not communicate with the satellites. A gyroscope integral to the navigation system module monitors the pitch and yaw of the vehicle created during cornering or turning. A hardwired vehicle speed input from the anti-lock brake system (ABS) module and a reverse input from the digital transmission range (TR) sensor through the SCP network are also used to detect vehicle speed and direction changes.

Diagnostics

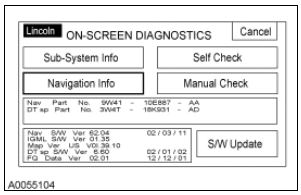
The navigation system provides internal self-diagnostics to assist with diagnosing vehicle concerns.



Press and hold the AUDIO and MENU buttons for 5 seconds.



Press 917 Enter.



- SELF CHECK provides internal self-test diagnostics. These DTCs are also accessible through the SCP network utilizing a diagnostic tool.
- NAVIGATION INFO provides access to speed signal, gyro, reverse input, and GPS information.
- SUB-SYSTEM INFO provides the various component configurations.
- MANUAL CHECK provides access to several diagnostics input tests:
    - Voice Output will verify the audio signals from the navigation system module and audio unit.
    - Hard Switch Test will check the various hardkey switches.
    - Microphone Test will check the strength of the voice signal.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Antenna coaxial cable • Global positioning system antenna • Navigation system DVD	• Battery junction box (BJB) fuse 14 (10A) • Central junction box (CJB) fuse(s): ♦ 2 (5A) ♦ 18 (20A) • Microphone • Circuitry

	• Navigation system module • Vehicle navigation radio

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before preceding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the data link diagnostics test. If the diagnostic tool responds with:

- SCP or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
- No response/not equipped for the navigation system module, Go To Pinpoint Test A .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the navigation system module.

7. If the DTCs retrieved are related to the concern, go to the Navigation System Module Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Navigation System Module Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	Navigation System Module	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new navigation system module. REFER to Navigation System Module in this section. CLEAR the DTCs. REPEAT the self-test.
B2139	Data Mismatch	Navigation System Module	CLEAR the DTCs. REPEAT the self-test. If DTC B2139 is retrieved again, REMOVE the navigation system module. REFER to Navigation System Module in this section. SEND it to an authorized repair facility. CLEAR the DTCs. REPEAT the self-test.
B2204	GPS Antenna Connection Open or Short	Navigation System Module	Go To Pinpoint Test B .
B2208	Navigation to Head Unit Communication Error	Navigation System Module	Go To Pinpoint Test I .
B2477	Module Configuration Failure	Navigation System Module	CHECK the navigation system module configuration. REFER to Section 418-01 .

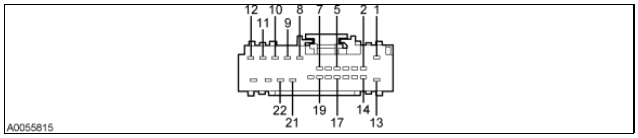
B2633	Driver Front Microphone Circuit Failure	Navigation System Module	Go To Pinpoint Test J .
B2858	Head Unit is Defective	Navigation System Module	CLEAR the DTCs. REPEAT the self-test. If DTC B2858 is retrieved again, REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. CLEAR the DTCs. REPEAT the self-test.
C1192	Vehicle Speed Circuit Failure	Navigation System Module	Go To Pinpoint Test C .
U1016	SCP Invalid Data (PCM)	Navigation System Module	Go To Pinpoint Test K .

For a complete list of navigation system module DTCs, refer to Section 419-10 .

Symptom Chart

Symptom Chart
Connector Circuit Reference

Navigation System Module C4209



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30-GK8 (RD/BK) keep alive voltage feed	Greater than 10 volts with the ignition switch in the ON or OFF position.
2	10-GK8 (GY/BK) B+ voltage feed ON/ACC position	Greater than 10 volts with the ignition switch in the ON or ACC position.
5	4-GK8 (GY/BK) controller area network (CAN) (+) communication	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
7	8-MC8 (WH/RD) navigation microphone (+)	Less than 5 ohms between the navigation system module and the rear view mirror with the rear view mirror disconnected. Greater than 10,000 ohms between the navigation system module and ground with the rear view mirror disconnected.
8	10-GK24 (GY/RD) video circuit RED	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
9		

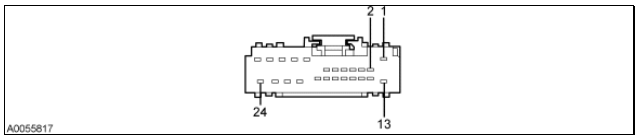
	10-GK26 (GY/VT) video circuit BLUE	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
10	9-GK35 (BN) video return	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
11	1-GK18 (WH/BU) navigation system voice (+)	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
12	2-GK18 (GY/VT) navigation system voice (-)	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
13	31-GK8 (BK/RD) navigation system module ground	Less than 5 ohms to ground.
14	8-CF63 (WH/GN) vehicle speed signal	Less than 5 ohms between the anti-lock brake system module and the navigation system module with the anti-lock brake system module disconnected. Greater than 10,000 ohms between the navigation system module and ground with the anti-lock brake system module disconnected.
17	5-GK8 (BU/YE) controller area network (CAN) (-) communication	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
19	9-MC8 (BN/RD) navigation microphone (-)	Less than 5 ohms between the navigation system module and the rear view mirror with the rear view mirror disconnected. Greater than 10,000 ohms between the navigation system module and ground with the rear view mirror disconnected.
21	10-GK25 (GY/OG) video circuit GREEN	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.
22	8-GK35 (WH) video synchronization circuit	Less than 5 ohms between the navigation system module and the audio unit with the audio unit disconnected. Greater than 10,000 ohms between the navigation system module and ground with the audio unit disconnected.

Audio Unit C2253c

		Normal Condition/Measurement

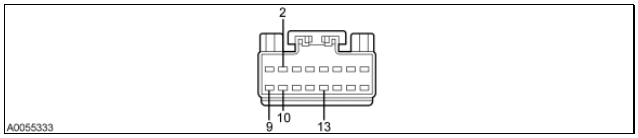
Pin Number(s)	Circuit Designation/Description	
1	10-GK24 (GY/RD) video circuit RED	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
2	10-GK25 (GY/OG) video circuit GREEN	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
3	9-GK35 (BN) video return	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
5	1-GK18 (WH/BU) navigation system voice (+)	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
7	4-GK8 (GY/BK) controller area network (CAN) (+) communication	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
8	10-GK26 (GY/VT) video circuit BLUE	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
9	8-GK35 (WH) video synchronization circuit	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
12	2-GK18 (GY/VT) navigation system voice (-)	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.
14	5-GK8 (BU/YE) controller area network (CAN) (-) communication	Less than 5 ohms between the navigation system module and the audio unit with the navigation system module disconnected. Greater than 10,000 ohms between the audio unit and ground with the navigation system module disconnected.

Audio Unit C2253a



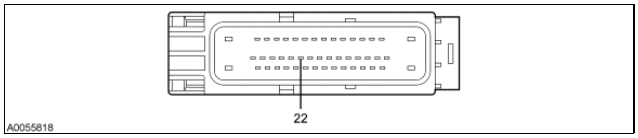
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29-MD15 (OG/BK) keep alive voltage feed	Greater than 10.5 volts with ignition switch in the ON or OFF position.
2	10-MD15 (GY/OG) B+ voltage feed in ON/ACC position	Greater than 10.5 volts with the ignition switch in the ON or ACC position.
13	31-MD15B (BK/GN) audio unit ground	Less than 5 ohms to ground.
24	31-MD15A (BK/GN) audio unit ground	Less than 5 ohms to ground.

Rear View Mirror C911



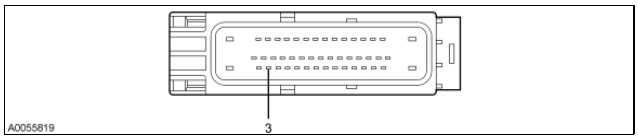
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AD15 (BK/OG) rear view mirror ground	Less than 5 ohms to ground.
9	8-MC8 (WH/RD) rear view mirror microphone (+)	Less than 5 ohms between the navigation system module and the rear view mirror with the navigation system module disconnected. Greater than 10,000 ohms between the rear view mirror and ground with the navigation system module disconnected.
10	9-MC8 (BN/RD) rear view mirror microphone (-)	Less than 5 ohms between the navigation system module and the rear view mirror with the navigation system module disconnected. Greater than 10,000 ohms between the rear view mirror and ground with the navigation system module disconnected.
13	75-AD15 (YE/BU) switched B+ voltage feed	0 volts with the ignition switch in the OFF position and greater than 10 volts with the ignition switch in the ON or ACC.

Anti-lock Brake System Module With Stability Assist C155



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
22	8-CF63 (WH/GN) vehicle speed signal	Less than 5 ohms between the anti-lock brake system module and the navigation system module with the navigation system module disconnected. Greater than 10,000 ohms between the anti-lock brake system module and ground with the navigation system module disconnected.

Anti-lock Brake System Module C155



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	8-CF63 (WH/GN) vehicle speed signal	Less than 5 ohms between the anti-lock brake system module and the navigation system module with the navigation system module disconnected. Greater than 10,000 ohms between the anti-lock brake system module and ground with the navigation system module disconnected.

Pinpoint Test A: No Communication With The Navigation System Module

Normal Operation

Battery voltage is supplied to the navigation system module through circuit 30-GK8 (RD/BK). The driver door module (DDM) supplies voltage to the navigation system module through circuit 10-GK8 (GY/BK) in the ON/ACC position. Circuit 31-GK8 (BK/RD) provides the navigation system module ground.

Possible Causes

- circuit 30-GK8 (RD/BK) open
- circuit 10-GK8 (GY/BK) open
- circuit 31-GK8 (BK/RD) open
- navigation system module

PINPOINT TEST A: NO COMMUNICATION WITH THE NAVIGATION SYSTEM MODULE

Test Step	Result / Action to Take
A1 CHECK THE RECORDED DTCS FROM THE DRIVER DOOR MODULE	
• Check the recorded results from the driver door module self-test. • **Are any DTCs recorded?**	**Yes** If DTC B2359, refer to Section 501-11 to continue diagnosis of DTC B2359. **No** GO to A2 .
A2 CHECK CIRCUITS 30-GK8 (RD/BK) AND 10-GK8 (GY/BK) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Navigation System Module C4209. • Key in ON position. • Measure the voltage between the navigation system module C4209-1, circuit 30-GK8 (RD/BK), harness side and ground; and between the navigation system module C4209-2, circuit 10-GK8 (GY/BK), harness side and ground.  A0056553 • **Are the voltages greater than 10.5 volts?**	**Yes** GO to A3 . **No** REPAIR the circuit in question. TEST the system for normal operation.
A3 CHECK CIRCUIT 31-GK8 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the navigation system module C4209-13, circuit 31-GK8 (BK/RD), harness side and ground.  A0056554 • **Is the resistance less than 5 ohms?**	**Yes** REFER to Section 418-00 to continue communication diagnostics. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test B: Navigation System Does Not Operate Correctly The Global Positioning System (GPS) Antenna Signal Is Inoperative

Normal Operation

The GPS antenna provides information from the GPS satellite system to the GPS receiver in the navigation system module. This information is used to calculate vehicle position and direction of travel.

Possible Causes

- GPS antenna
- GPS antenna cable
- navigation system module

PINPOINT TEST B: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE GLOBAL POSITIONING SYSTEM (GPS) ANTENNA SIGNAL IS INOPERATIVE

NOTE: The vehicle must be driven outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges.

Test Step	Result / Action to Take
B1 CHECK THE RECORDED DTCS FROM THE NAVIGATION SYSTEM MODULE	
• Check the recorded results from the navigation system module self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2204, GO to B2 . **No** GO to B6 .
B2 CHECK THE GPS ANTENNA FOR AN OPEN	
• Key in OFF position. • Disconnect: GPS Antenna. • Measure the resistance between the GPS antenna center conductor pin, component side and the GPS antenna shield, component side.  A0056767 • **Is the resistance between 80 and 125 ohms?**	**Yes** GO to B3 . **No** INSTALL a new GPS antenna. REFER to Global Positioning System (GPS) Antenna in this section. CLEAR the DTCs. REPEAT the self-test.
B3 CHECK THE COAXIAL CABLE CENTER CONDUCTOR FOR A SHORT TO GROUND NAVIGATION SYSTEM MODULE DISCONNECTED	
• Disconnect: Navigation System Module GPS Antenna.. • Measure the resistance between the navigation system module GPS antenna coaxial cable center conductor pin, harness side and ground.  A0056556 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B4 . **No** INSTALL a new antenna coaxial cable. CLEAR the DTCs. REPEAT the self-test.

B4 CHECK THE COAXIAL CABLE CENTER CONDUCTOR FOR AN OPEN	
• Measure the resistance between the GPS antenna coaxial cable center conductor pin, harness side and the navigation system module GPS antenna coaxial cable center conductor pin, harness side.  A0056557 • **Is the resistance less than 5 ohms?**	**Yes** GO to B5 . **No** INSTALL a new antenna coaxial cable. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK THE COAXIAL CABLE SHIELD FOR AN OPEN	
• Measure the resistance between the GPS antenna coaxial cable shield, harness side and the navigation system module GPS antenna coaxial cable shield, harness side.  A0056558 • **Is the resistance less than 5 ohms?**	**Yes** GO to B9 . **No** INSTALL a new antenna coaxial cable. CLEAR the DTCs. REPEAT the self-test.
B6 CHECK THE NAVIGATION SYSTEM	
• Move the vehicle outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges. • Turn the audio unit on. • Press the MAP button.  A0065067  A0057837 • **Does the GPS icon disappear?**	**Yes** The system is operating correctly at this time. **No** GO to B7 .
B7 CHECK THE GPS SIGNAL STATUS	

• Press and hold the AUDIO and MENU buttons for 5 seconds.  A0055102 • Press 917 Enter.  A0055103 • Select Navigation Info.  A0055104 • Select GPS Information.  A0055105 • Monitor the GPS status.  A0055106 • **After 10 minutes, does the ST (status) column of the GPS information display P (position) or T (tracking)?**	**Yes** The system is operating correctly at this time. **No** GO to B8 .
B8 SUBSTITUTE THE GPS ANTENNA	
• Substitute a known good GPS antenna. • **After 10 minutes, does the ST (status) column of the GPS information display P (position) or T (tracking)?**	**Yes** INSTALL a new GPS antenna. Refer to Global Positioning System (GPS) Antenna in this section. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL the original antenna. GO to B9 .

B9 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: Navigation System Does Not Operate Correctly The Position Cursor Is Inoperative

Normal Operation

The anti-lock brake system (ABS) module supplies the vehicle speed signal (VSS) to the navigation system module through circuit 8-CF63 (WH/GN). The navigation system uses the VSS signal and the global positioning system (GPS) antenna to establish vehicle speed and position.

Possible Causes

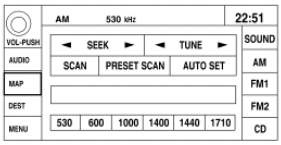
- circuit 8-CF63 (WH/GN) open, short to ground or short to voltage
- GPS antenna
- audio unit
- navigation system module
- anti-lock brake system (ABS) module

PINPOINT TEST C: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE POSITION CURSOR IS INOPERATIVE

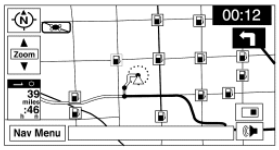
NOTE: Outdated map disc information may cause this symptom to recur at the same place.

Test Step	Result / Action to Take
C1 CHECK THE RECORDED DTCS FROM THE NAVIGATION SYSTEM MODULE	
• Check the recorded results from the navigation system module self-test. • **Are any DTCs recorded?**	**Yes** For DTC C1192, GO to C2 . **No** GO to C4 .
C2 CHECK CIRCUIT 8-CF63 (WH/GN) FOR AN OPEN AND A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Navigation System Module C4209. • Disconnect: Anti-lock Brake System Module. • For vehicles without stability assist, measure the resistance between the anti-lock brake system module C155-3, circuit 8-CF63 (WH/GN), harness side and the navigation system	**Yes** GO to C3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

module C4209-14, circuit 8-CF63 (WH/GN), harness side; and between the navigation system module C4209-14, circuit 8-CF63 (WH/GN), harness side and ground.  A0056563 • For vehicles with stability assist, measure the resistance between the anti-lock brake system module C155-22, circuit 8-CF63 (WH/GN), harness side and the navigation system module C4209-14, circuit 8-CF63 (WH/GN), harness side; and between the navigation system module C4209-14, circuit 8-CF63 (WH/GN), harness side and ground.  A0056564 • **Is the resistance less than 5 ohms between the anti-lock brake system module and the navigation system module; and is the resistance greater than 10,000 ohms between the navigation system module and ground?**	
C3 CHECK CIRCUIT 8-CF63 (WH/GN) FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the navigation system module C4209-14, circuit 8-CF63 (WH/GN), harness side and ground.  A0056565 • **Is any voltage indicated?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to C9 .
C4 CHECK THE NAVIGATION SYSTEM	
• Move the vehicle outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges. • Turn the audio unit on. • Press the MAP button.	**Yes** GO to C5 . **No** Go To Pinpoint Test B .



A0065067



A0057837

- **Does the GPS icon disappear?**

C5 CHECK THE VEHICLE SPEED SIGNAL INPUT	
• Press and hold the AUDIO and MENU buttons for 5 seconds.  A0055102 • Press 917 Enter.  A0055103 • Select Navigation Info.  A0055104 • Select Vehicle Signals.  A0055107  A0055108 • Drive the vehicle at a minimum speed of 5 km/h (3 mph). • **Does the SPEED signal correspond to the speed indicated on**	**Yes** GO to C7 . **No** If the speedometer is inoperative, REFER to Section 413-01 . If the speedometer is inaccurate, GO to C6 .

the vehicle speedometer?	
C6 CHECK THE VEHICLE SPEED SIGNAL CALIBRATION	
• Select Cancel to exit from diagnostic screens. • Press the MAP button.  A0065067 • Select Nav Menu.  A0057838 • Select Navigation Set Up.  A0055110 • Select Calibration.  A0055111 • Select Distance.  A0055112 • Drive the vehicle a minimum of 10 km (6.25 miles). • **Does the position cursor move along the course of the intended route?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a speed signal calibration error. **No** GO to C8 .
C7 CHECK THE GYROSCOPE SIGNAL	

• Monitor the gyro voltage.  A0055113 • Drive the vehicle turning left and right. • **Does the gyro voltage change when the vehicle turns left or right?**	**Yes** GO to C8 . **No** The gyroscope is integral to the navigation system module. INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
C8 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

C9 CHECK FOR CORRECT ANTI-LOCK BRAKE SYSTEM MODULE OPERATION	

• Disconnect all the anti-lock brake module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the anti-lock brake module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new anti-lock brake system module. REFER to Section 206-09 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: Navigation System Does Not Operate Correctly The Voice Guidance Is Inoperative/Does Not Operate Correctly

Normal Operation

The navigation system module provides voice-assisted route guidance to the audio unit through the audio circuits 1-GK18 (WH/BU) and 2-GK18 (GY/VT). The volume of the voice guidance is controlled by the audio unit.

Possible Causes

- circuit 1-GK18 (WH/BU) open, short to ground or short to voltage

- circuit 2-GK18 (GY/VT) open, short to ground or short to voltage
- navigation system module
- audio unit

PINPOINT TEST D: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE VOICE GUIDANCE IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
D1 CHECK THE SPEAKERS	
• Key in ON position. • Turn the audio unit on. • Carry out the speaker walk-around test by pressing the MAP and DEST buttons on the audio unit while in the AM or FM mode for 5 seconds. • **Do the speakers operate correctly?**	**Yes** GO to D2 . **No** REFER to Section 415-00 to continue audio system diagnostics.
D2 CALCULATE A VEHICLE ROUTE	
• Calculate a vehicle route by setting a desired destination. • Press the voice icon on the present position screen.  A0057839 • **Does the voice guidance system operate correctly?**	**Yes** The system is operating correctly at this time. **No** GO to D3 .
D3 CHECK THE VOICE GUIDANCE	
• Select Nav Menu.  A0057838 • Select Voice Guidance.  A0055114 • **Is the voice guidance system on the navigation menu turned ON?**	**Yes** GO to D4 . **No** Turn the voice guidance system ON. TEST the system for normal operation.
D4 CHECK THE VOICE GUIDANCE VOLUME	

• Select Volume.  A0055115 • **Is the volume adjustment set to the minimum?**	**Yes** Increase the sound volume. Test the system for normal operation. **No** GO to D5 .
D5 CHECK THE AUDIO UNIT OUTPUT	
• Press and hold the AUDIO and MENU buttons for 5 seconds.  A0055102 • Press 917 Enter.  A0055103 • Select Manual Check.  A0055116 • Select Voice Output Test.  A0055117 • Select BEEP ON.  A0055118 • **Was a tone emitted by the audio unit?**	**Yes** GO to D6 . **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. TEST the system for normal operation.

D6 CHECK THE NAVIGATION SYSTEM MODULE OUTPUT	
• Select ADPCM ON (Normal).  A0055119 • **Was a tone emitted by the navigation system module?**	**Yes** GO to D9 . **No** GO to D7 .
D7 CHECK CIRCUITS 1-GK18 (WH/BU) AND 2-GK18 (GY/VT) FOR AN OPEN AND A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Audio Unit C2253c. • Disconnect: Navigation System Module C4209. • Measure the resistances between the navigation system module C4209 pins, harness side and the audio unit C2253c pins, harness side; and between the navigation system module C4209 pins, harness side and ground as follows: **Navigation System Module Pin** / **Audio Unit Pin** / **Circuit** C4209-11 / C2253c-5 / 1-GK18 (WH/BU) C4209-12 / C2253c-12 / 2-GK18 (GY/VT)  A0056560 • **Are the resistances less than 5 ohms between the navigation system module and the audio unit; and greater than 10,000 ohms between the navigation system module and ground?**	**Yes** GO to D8 . **No** REPAIR the circuit in question. TEST the system for normal operation.
D8 CHECK CIRCUITS 1-GK18 (WH/BU) AND 2-GK18 (GY/VT) FOR A SHORT TO VOLTAGE	
• Key in ON position.  A0056768	**Yes** REPAIR the circuit in question. TEST the system for normal operation. **No** GO to D9 .

• Measure the voltage between the navigation system module C4209-11, circuit 1-GK18 (WH/BU), harness side and ground; and between the navigation system module C4209-12, circuit 2-GK18 (GY/VT), harness side and ground. • **Is any voltage indicated?**	
D9 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: Navigation System Does Not Operate Correctly The Display Screen Is Inoperative

Normal Operation

The audio unit display is controlled by the navigation system module. Video color is provided through circuits 10-GK24 (GY/RD), 10-GK25 (GY/OG), and 10-GK26 (GY/VT). Circuit 8-GK35 (WH) provides the color synchronization and circuit 9-GK35 (BN) is the video signal return.

Possible Causes

- circuit 10-GK24 (GY/RD) open, short to ground or short to voltage
- circuit 10-GK25 (GY/OG) open, short to ground or short to voltage
- circuit 10-GK26 (GY/VT) open, short to ground or short to voltage
- circuit 8-GK35 (WH) open, short to ground or short to voltage
- circuit 9-GK35 (BN) open, short to ground or short to voltage
- navigation system module
- audio unit

PINPOINT TEST E: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE DISPLAY SCREEN IS INOPERATIVE

Test Step	Result / Action to Take
E1 CHECK THE RECORDED DTCS FROM THE NAVIGATION SYSTEM MODULE	
• Check the recorded results from the navigation system module self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2208, Go To Pinpoint Test I to diagnose the audio unit. For all other DTCs, REFER to the Navigation System Module

	Diagnostic Trouble Code (DTC) Index in this section. **No** GO to E2 .
E2 CHECK THE AUDIO UNIT BUTTONS	
• Press the MAP, AUDIO, DEST, and MENU buttons.  A0065066 • **Does the display screen operate correctly?**	**Yes** The system is operating correctly at this time. The concern may have been caused by SCREEN OFF selection on MENU screen. **No** GO to E3 .
E3 CHECK VIDEO AND SYNCHRONIZATION CIRCUITS FOR AN OPEN AND A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Audio Unit C2253c. • Disconnect: Navigation System Module C4209. • Measure the resistances between the navigation system module C4209 pins harness side and the audio unit C2253c pins harness side; and between the navigation system module C4209 pins harness side and ground as follows: **Navigation System Module Pin** / **Audio Unit Pin** / **Circuit** C4209-8 / C2253c-1 / 10-GK24 (GY/RD) C4209-9 / C2253c-8 / 10-GK26 (GY/VT) C4209-10 / C2253c-3 / 9-GK35 (BN) C4209-21 / C2253c-2 / 10-GK25 (GY/OG) C4209-22 / C2253c-9 / 8-GK35 (WH)  A0066588 • **Are the resistances less than 5 ohms between the navigation system module and the audio unit; and greater than 10,000 ohms between the navigation**	**Yes** GO to E4 . **No** REPAIR the circuit in question. TEST the system for normal operation.

system module and ground?	
E4 CHECK VIDEO AND SYNCHRONIZATION CIRCUITS FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the navigation system module C4209 pins harness side and ground as follows: **Navigation System Module Pin** / **Circuit** C4209-8 / 10-GK24 (GY/RD) C4209-9 / 10-GK26 (GY/VT) C4209-10 / 9-GK35 (BN) C4209-21 / 10-GK25 (GY/OG) C4209-22 / 8-GK35 (WH)  A0056573 • **Is any voltage indicated?**	**Yes** REPAIR the circuit the question. TEST the system for normal operation. **No** GO to E5 .
E5 SUBSTITUTE THE AUDIO UNIT	
• Substitute a known good audio unit. • **Does the screen display appear?**	**Yes** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. TEST the system for normal operation. **No** INSTALL the original audio unit.GO to E6 .
E6 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: Navigation System Does Not Operate Correctly The Navigation Screen Is Inoperative

Normal Operation

The screen display of the audio unit for audio and navigation is controlled by the navigation system module. A map digital versatile disc (DVD) stored in the navigation system module sends route data to the audio unit through the video interface circuits.

Possible Causes

- navigation system disc
- navigation system module
- audio unit

PINPOINT TEST F: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE NAVIGATION SCREEN IS INOPERATIVE

Test Step	Result / Action to Take
F1 CHECK THE SWITCH DISPLAY	
• Key in ON position. • Turn the audio unit on. • Press and hold the AUDIO and MENU buttons for 5 seconds.  A0055102 • Press 917 Enter.  A0055103 • Select Manual Check.  A0055116 • Select Hard Switch Test.	**Yes** GO to F2 . **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. TEST the system for normal operation.

 A0055120 • Push each switch on the display.  A0055121 • **Are all of the switches operating correctly?**	
F2 CHECK MAP DISC SURFACE	
• Key in OFF position. • Key in ON position. • Visually inspect the map disc surface. • **Is the map disc dirty or scratched?**	**Yes** INSTALL a new map disc. TEST the system for normal operation. **No** INSTALL the map disc. GO to F3 .
F3 CHECK THE MAP DISPLAY	
• Key in OFF position. • Key in ON position. • Press the MAP button.  A0065067 • **Is the map displayed?**	**Yes** The system is operating correctly at this time. **No** GO to F4 .
F4 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test G: Navigation System Does Not Operate Correctly The Audible Switches Are Inoperative

Normal Operation

The audible switch feedback settings are controlled by the audio unit. The notification can be set to ALL, TOUCH SCREEN, or NONE depending on user preference.

Possible Causes

- audio unit

PINPOINT TEST G: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE AUDIBLE SWITCHES ARE INOPERATIVE

Test Step	Result / Action to Take
G1 CHECK THE SWITCH DISPLAY	
• Key in ON position. • Turn the audio unit on. • Press the MENU button.  A0066586 • Select SYSTEM SETUP.  A0055122 • Select AUDIBLE FEEDBACK.  A0055123 • **Is NONE highlighted on the audible feedback settings?**	**Yes** Select ALL. TEST the system for normal operation. **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. TEST the system for normal operation.

Pinpoint Test H: Navigation System Does Not Operate Correctly Unable to Insert or Eject Map Disc

Normal Operation

The navigation map disc is contained in the navigation system module. The voltage is supplied to the navigation system module with the key in the ON or ACC position through 10-GK8 (GY/BK). Circuit 31-GK8 (BK/RD) supplies the navigation system module ground.

Possible Causes

- circuit 10-GK8 (GY/BK) open or short to ground
- circuit 31-GK8 (BK/RD) open
- navigation system module

PINPOINT TEST H: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY UNABLE TO INSERT OR EJECT MAP DISC

Test Step	Result / Action to Take
H1 CHECK CIRCUIT 10-GK8 (GY/BK) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Navigation System Module C4209. • Key in ON position. • Measure the voltage between the navigation system module C4209-2, circuit 10-GK8 (GY/BK), harness side and ground.  A0056574 • **Is the voltage greater than 10 volts?**	**Yes** GO to H2 . **No** REPAIR the circuit. TEST the system for normal operation.
H2 CHECK CIRCUIT 31-GK8 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the navigation system module C4209-13, circuit 31-GK8 (BK/RD), harness side and ground.  A0056554 • **Is the resistance less than 5 ohms?**	**Yes** GO to H3 . **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	
• Disconnect all the navigation system module connectors. • Check for: • corrosion	**Yes** INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.

• pushed-out pins • Connect all the navigation system module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test I: Navigation System Does Not Operate Correctly The Audio Unit Is Inoperative

Normal Operation

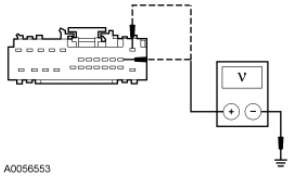
The navigation system module communicates to the audio unit through circuits 5-GK8 (BU/YE) and 4-GK8 (GY/BK) using the controller area network (CAN) protocol. Battery voltage is supplied to the audio unit through circuit 29-MD15 (OG/BK). Circuit 10-MD15 (GY/OG) provides voltage to the audio unit with the key in the ON or ACC position. The audio unit ground is supplied through circuits 31-MD15B (BK/GN) and 31-MD15A (BK/GN).

Possible Causes

- circuit 4-GK8 (GY/BK) open, short to ground or short to voltage
- circuit 5-GK8 (BU/YE) open, short to ground or short to voltage
- circuit 31-MD15A (BK/GN) open
- circuit 31-MD15B (BK/GN) open
- navigation system module
- audio unit

PINPOINT TEST I: NAVIGATION SYSTEM DOES NOT OPERATE CORRECTLY THE AUDIO UNIT IS INOPERATIVE

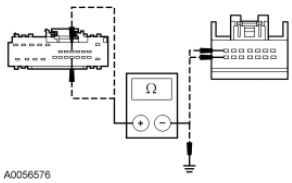
Test Step	Result / Action to Take
I1 CHECK THE RECORDED DTCS FROM THE NAVIGATION SYSTEM MODULE	
• Check the recorded results from the navigation system module self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2208, GO to I2 . **No** Go To Pinpoint Test E to diagnose the video circuits.
I2 CHECK CIRCUITS 29-MD15 (OG/BK) AND 10-MD15 (GY/OG) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Audio Unit C2253a. • Key in ON position. • Measure the voltage between the audio unit C2253a-1, circuit 29-MD15 (OG/BK), harness side and ground; and between the audio unit C2253a-2, circuit 10-MD15 (GY/OG), harness side and ground.	**Yes** GO to I3 . **No** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation.



- **Are the voltages greater than 10 volts?**

I3 CHECK CIRCUITS 31-MD15B (BK/GN) AND 31-MD15A (BK/GN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the audio unit C2253a-13, circuit 31-MD15B (BK/GN), harness side and ground; and between the audio unit C2253a-24, circuit 31-MD15A (BK/GN), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** GO to I4 . **No** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation.
I4 CHECK CIRCUITS 5-GK8 (BU/YE) AND 4-GK8 (GY/BK) FOR AN OPEN AND A SHORT TO GROUND	
• Disconnect: Navigation System Module C4209. • Disconnect: Audio Unit C2253c. • Measure the resistances between the navigation system module C4209 pins, harness side and audio unit C2253c pins, harness side; and between the navigation system module C4209 pins, harness side and ground as follows:	**Yes** GO to I5 . **No** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation.

Navigation System Module Pin	Audio Unit Pin	Circuit
C4209-5	C2253c-7	4-GK8 (GY/BK)
C4209-17	C2253c-14	5-GK8 (BU/YE)



- **Are the resistances less than 5 ohms between the navigation system module and the audio unit; and greater than 10,000 ohms between the navigation system module and ground?**

I5 CHECK CIRCUITS 5-GK8 (BU/YE) AND 4-GK8 (GY/BK) FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the navigation system module C4209-5, circuit 4-GK8 (GY/BK), harness side and ground; and between the navigation system module C4209-17, circuit 5-GK8 (BU/YE), harness side and ground.  • **Is any voltage indicated?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. TEST the system for normal operation. **No** GO to I6 .
I6 SUBSTITUTE THE AUDIO UNIT	
• Substitute a known good audio unit. • Repeat the navigation system module self-test. • **Is DTC B2208 present?**	**Yes** INSTALL the original audio unit. GO to I7 . **No** REMOVE the audio unit. REFER to Section 415-01 . SEND it to an authorized repair facility. CLEAR the DTCs. TEST the system for normal operation.
I7 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: DTC B2633 Driver Front Microphone Circuit Failure

Normal Operation

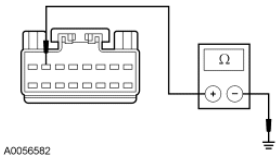
The navigation system microphone is integrated into the rear view mirror. The microphone supplies a voice signal to the navigation system module through circuits 8-MC8 (WH/RD) and 9-MC8 (BN/RD). The rear view mirror receives switched B+ voltage through circuit 75-AD15 (YE/BU). Circuit 31-AD15 (BK) provides the mirror ground.

Possible Causes

- circuit 8-MC8 (WH/RD) open, short to ground or short to voltage
- circuit 9-MC8 (BN/RD) open, short to ground or short to voltage
- circuit 31-AD15 (BK) open
- microphone
- navigation system module

PINPOINT TEST J: DTC B2633 DRIVER FRONT MICROPHONE CIRCUIT FAILURE

Test Step	Result / Action to Take
J1 CHECK VOICE SIGNAL FROM THE MICROPHONE	
• Key in OFF position. • Disconnect: Navigation System Module C4209. • Key in ON position. • Measure the voltage between the navigation system module C4209-7, circuit 8-MC8 (WH/RD), harness side and between the navigation system module C4209-19, 9-MC8 (BN/RD), harness side while speaking loudly into the rear view mirror microphone.  A0056578 • **Is any AC voltage indicated?**	**Yes** GO to J6 . **No** GO to J2 .
J2 CHECK CIRCUIT 75-AD15 (YE/BU) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Rear View Mirror C911. • Key in ON position. • Measure the voltage between the rear view mirror C911-13, circuit 75-AD15 (YE/BU), harness side and ground.  A0056581 • **Is the voltage greater than 10 volts?**	**Yes** GO to J3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
J3 CHECK CIRCUIT 31-AD15 (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the rear view mirror C911-2, circuit 31-AD15 (BK/OG), harness side and ground.	**Yes** GO to J4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

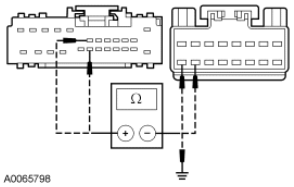


- **Is the resistance less than 5 ohms?**

J4 CHECK CIRCUITS 8-MC8 (WH/RD) AND 9-MC8 (BN/RD) FOR AN OPEN AND A SHORT TO GROUND

- Measure the resistances between the navigation system module C4209 pins, harness side and the rear view mirror C911 pins, harness side; and between the navigation system module C4209 pins, harness side and ground as follows:

Navigation System Module Pin	Rear View Mirror Pin	Circuit
C4209-7	C911-9,	8-MC8 (WH/RD)
C4209-19	C911-10	9-MC8 (BN/RD)



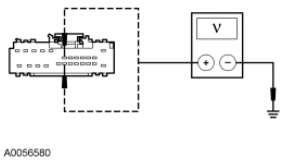
- **Are the resistances less than 5 ohms between the navigation system module and the rear view mirror; and greater than 10,000 ohms between the navigation system module and ground?**

Yes
GO to J5 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

J5 CHECK CIRCUITS 8-MC8 (WH/RD) AND 9-MC8 (BN/RD) FOR A SHORT TO VOLTAGE

- Key in ON position.
- Measure the voltage between the navigation system module C4209-7, circuit 8-MC8 (WH/RD), harness side and ground; and between the navigation system module C4209-19, circuit 9-MC8 (BN/RD), harness side and ground.



- **Is any voltage indicated?**

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
INSTALL a new rear view mirror. REFER to Section 501-09 . CLEAR the DTCs. REPEAT the self-test.

J6 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the navigation system module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test K: DTC U1016 SCP Invalid Data Powertrain Control Module

Normal Operation

The navigation system module receives a vehicle in reverse signal from the powertrain control module (PCM) through the standard corporate protocol (SCP) network.

Possible Causes

- PCM

PINPOINT TEST K: DTC U1016 SCP INVALID DATA POWERTRAIN CONTROL MODULE

Test Step	Result / Action to Take
K1 CHECK THE RECORDED DTCS FROM THE POWERTRAIN CONTROL MODULE (PCM)	
• Check the recorded results from the PCM self-test. • **Are any DTCs recorded?**	**Yes** For PXXX codes, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. For all other codes, REFER to Section 419-10 . **No** GO to K2 .
K2 MONITOR THE PCM REVERSE INPUT	
• Enter the following diagnostic mode on the diagnostic tool: PCM PID Monitor. • Monitor the transmission range (TR) sensor PID. • Place the selector lever in REVERSE. • **Does the TR sensor PID indicate correctly?**	**Yes** GO to K3 . **No** REFER to Section 307-01 to continue diagnosis of the input.

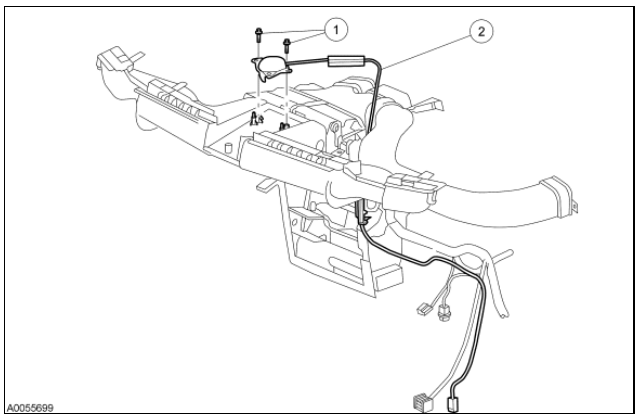
K3 CHECK THE REVERSE SIGNAL INPUT	
• Press and hold the AUDIO and MENU buttons for 5 seconds.  A0055102 • Press 917 Enter.  A0055103 • Select Navigation Info.  A0055104 • Select Vehicle Signals.  A0055107  A0068110 • **Does the reverse signal indicate ON?**	**Yes** CLEAR the DTCs. REPEAT the self-test. IF DTC U1016 is retrieved again, GO to K4 . **No** GO to K4 .
K4 CHECK FOR CORRECT NAVIGATION SYSTEM MODULE OPERATION	

• Disconnect all the navigation system module connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new navigation system module. REFER to Navigation System Module in this section. CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The

• Connect all the navigation system module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Global Positioning System (GPS) Antenna

Printable View (56 KB)



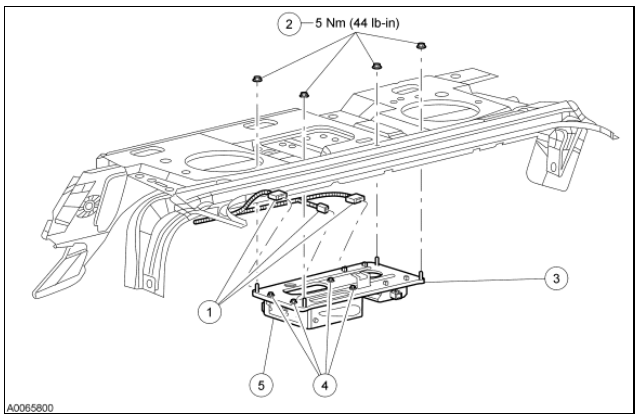
Item	Part Number	Description
1	N61131-S36	GPS antenna screws (2 required)
2	10E893-A	GPS antenna and cable

Removal and Installation

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Remove the defroster duct. For additional information, refer to Section 412-04 .
3. Remove the 2 GPS antenna screws.
4. Disconnect the cable and remove the GPS antenna.
5. To install, reverse the removal procedure.

Navigation System Module

Printable View (75 KB)



Item	Part Number	Description
1	14A005	Navigation system module electrical connectors (3 required)
2	N521906 - S309	Navigation system module nuts (4 required)
3	10E931	Navigation system module and bracket assembly
4	W706919-S900	Navigation system module bolts (4 required)
5	10E887	Navigation system module

Removal and Installation

1. ⚠ **CAUTION: Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.**

   NOTE: Prior to removal of the navigation system module, it is necessary to remove the digital versatile disc (DVD) from the navigation system module and store it in the customer case.

   Disconnect the battery. For additional information, refer to Section 414-01 .

2. Remove the upper luggage compartment trim panel.

3. Remove the package tray. For additional information, refer to Section 501-05 .

4. Disconnect the 3 navigation system module electrical connectors.

5. Remove the 4 nuts and the navigation system module and bracket assembly.
   - To install, tighten to 5 Nm (44 lb-in).

6. Remove the 4 bolts and the navigation system module.

7. To install, reverse the removal procedure.

B1331	Decklid Ajar Rear Door Circuit Failure	REM	REFER to Section 417-02 .
B1341	Power Door Unlock Circuit Short to Ground	DDM	REFER to Section 501-14 .
B1342	ECU is Defective	Parking Aid Module	CLEAR the DTC. REPEAT the parking aid module self-test. If DTC B1342 is retrieved again, INSTALL a new parking aid module. REFER to Section 413-13 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved again, INSTALL a new FEM. REFER to Front Electronic Module (FEM) in this section. CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	DATC	CLEAR the DTC. REPEAT the DATC module self-test. If DTC B1342 is retrieved again, INSTALL a new DATC module. REFER to Section 412-00 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	Climate Control Seat Module	CLEAR the DTC. REPEAT the climate control seat module self-test. If DTC B1342 is retrieved again, INSTALL a new climate control seat module. REFER to Section 501-10 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	Instrument Cluster	CLEAR the DTC. REPEAT the instrument cluster self-test. If DTC B1342 is retrieved again, INSTALL a new instrument cluster. REFER to Section 413-01 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective		

		Driver Seat Module (DSM)	REPEAT the DSM self-test. If DTC B1342 is retrieved again, INSTALL a new DSM. REFER to Driver Seat Module (DSM) in this section. CLEAR the DTCs. REPEAT the self test.
B1342	ECU is Defective	DDM	CLEAR the DTC. REPEAT the DDM self-test. If DTC B1342 is retrieved again, INSTALL a new DDM. REFER to Driver Door Module (DDM) in this section. CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	REM	CLEAR the DTC. REPEAT the REM self-test. If DTC B1342 is retrieved again, INSTALL a new REM. REFER to Rear Electronic Module (REM) in this section. CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	RCM.	CLEAR the DTC. REPEAT the RCM self-test. If DTC B1342 is retrieved again, INSTALL a new RCM. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	Anti-lock Brake System (ABS)/ Traction Control (TC) Module or Stability Assist Module	CLEAR the DTC. REPEAT the ABS/TC module self-test. If DTC B1342 is retrieved again, INSTALL a new ABS/TC module. REFER to Section 206-09 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU Defective	Message Center	**NOTE:** The message center is part of the instrument cluster. CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new instrument cluster. REFER to Section 413-01 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	Navigation System Module	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved again, INSTALL a new navigation system module. REFER to Section 419-07 . CLEAR the DTCs. REPEAT the self-test.
B1342	ECU is Defective	Audio Control Module (ACM)	CLEAR the DTCs. CARRY OUT the ACM On-Demand Self-Test. REMOVE the ACM, REFER to Section 415-00 and

			SEND it to an authorized Ford audio system repair facility if DTC B1342 is retrieved again. TEST the system for normal operation.
B1342	ECU is Defective	Electronic Parking Brake Module	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved again, INSTALL a new electronic parking brake module. REFER to Section 206-05 . CLEAR the DTCs. REPEAT the self-test.
B1352	Ignition Key-in Circuit Failure	Instrument Cluster	REFER to Section 413-09 .
B1358	Ignition Switch or Blower Electronics Circuit Short to Ground	Climate Control Seat Module	REFER to Section 501-10 .
B1416	Power Window LR Motor Circuit Short to Battery	DDM	REFER to Section 501-11 .
B1424	Power Window RR Switch Circuit Short to Battery	DDM	REFER to Section 501-11 .
B1470	Lamp Headlamp Input Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1479	Low Washer Fluid Level Switch Circuit Failure	FEM	REFER to Section 413-01 .
B1483	Brake Pedal Input Circuit Failure	REM	REFER to Section 206-09 .
B1483	Brake Pedal Input Circuit Failure	ABS/TC Module or Stability Assist Module	REFER to Section 206-09 .
B1485	Brake Pedal Input Circuit Battery Short	ABS/TC Module or Stability Assist Module	REFER to Section 206-09 .
B1499	Lamp Turn Signal Left Circuit Failure	FEM	REFER to Section 417-01 .
B1499	Lamp Turn Signal Left Circuit Failure	REM	REFER to Section 417-01 .
B1501	Lamp Turn Signal Left Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1501	Lamp Turn Signal Left Circuit Short to Battery	REM	REFER to Section 417-01 .
B1503	Lamp Turn Signal Right Circuit Failure	FEM	REFER to Section 417-01 .
B1503	Lamp Turn Signal Right Circuit Failure	REM	REFER to Section 417-01 .
B1505	Lamp Turn Signal Right Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1505	Lamp Turn Signal Right Circuit Short to Battery	REM	REFER to Section 417-01 .
B1519	Hood Switch Circuit Failure	FEM	REFER to Section 419-01A .
B1526	Keyless Entry Circuit Short to Ground	DDM	REFER to Section 501-14 .
B1530	Memory Set Switch Circuit Short to Ground	DDM	REFER to Section 501-10 .

B1534	Memory 1 Switch Circuit Short to Ground	DDM	REFER to Section 501-10 .
B1538	Memory 2 Switch Circuit Short to Ground	DDM	REFER to Section 501-10 .
B1551	Decklid Release Circuit Failure	FEM	REFER to Section 501-14 .
B1567	Headlamp High-Beam Circuit Failure	FEM	REFER to Section 417-01 .
B1567	Headlamp High-Beam Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1600	PATS Ignition Key Transponder Signal is Not Received	Instrument Cluster	REFER to Section 419-01B .
B1601	PATS Received Incorrect Key-code From Ignition Key Transponder	Instrument Cluster	REFER to Section 419-01B .
B1602	PATS Received Invalid Format of Key-code From Ignition Key Transponder	Instrument Cluster	REFER to Section 419-01B .
B1627	PRNDL Reverse Input Circuit Failure	Parking Aid Module	REFER to Section 413-13 .
B1676	Battery Voltage Out of Range	FEM	REFER to Section 414-00 .
B1676	Battery Voltage Out of Range	REM	REFER to Section 414-00 .
B1676	Battery Voltage Out of Range	Message Center	REFER to Section 414-00 .
B1676	Battery Voltage Out of Range	DATC	REFER to Section 414-00 .
B1676	Battery Voltage Out of Range	DSM	REFER to Section 414-00 .
B1676	Battery Voltage Out of Range	ABS/TC Module or Stability Assist Module	REFER to Section 206-09 .
B1676	Battery Voltage Out of Range	DDM	REFER to Section 414-00 .
B1681	PATS Transceiver Module Signal is Not Received	Instrument Cluster	REFER to Section 419-01B .
B1689	Autolamp Delay Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1703	Seat Driver Recline Forward Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1707	Seat Driver Recline Rearward Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1711	Seat Driver Front Up Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1715	Seat Driver Front Down Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1719	Seat Driver Forward Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1723	Seat Driver Rearward Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1727	Seat Driver Rear Up Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1731	Seat Driver Rear Down Switch Circuit Short to Battery	DSM	REFER to Section 501-10 .
B1757	Seat Driver Rear Up/Down Circuit Failure	DSM	REFER to Section 501-10 .
B1761		DSM	REFER to Section 501-10 .

	Seat Driver Front Up/Down Circuit Failure		
B1765	Seat Driver Forward/Rearward Circuit Failure	DSM	REFER to Section 501-10 .
B1769	Seat Driver Recliner F/R Circuit Failure	DSM	REFER to Section 501-10 .
B1794	Lamp Headlamp Low-Beam Circuit Failure	FEM	REFER to Section 417-01 .
B1869	Lamp Air Bag Warning Indicator Circuit Open	RCM	REFER to Section 501-20B .
B1870	Lamp Air Bag Warning Indicator Circuit Short to Battery	RCM	REFER to Section 501-20B .
B1875	Turn Signal/Hazard Switch Signal Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1891	Air Bag Tone Warning Indicator Circuit Shorted to Battery	RCM	REFER to Section 501-20B .
B1892	Air Bag Tone Warning Indicator Circuit Failure	RCM	REFER to Section 501-20B .
B1921	Air Bag Diagnostic Monitor Ground Circuit Open	RCM	REFER to Section 501-20B .
B1946	Climate Control A/C Post Evaporator Sensor Circuit Failure	DATC	REFER to Section 412-00 .
B1947	Climate Control A/C Post Evaporator Sensor Circuit Short to Ground	DATC	REFER to Section 412-00 .
B1966	A/C Post Heater Sensor Circuit Failure	DATC	REFER to Section 412-00 .
B1967	A/C Post Heater Sensor Circuit Short to Ground	DATC	REFER to Section 412-00 .
B1984	Luggage Compartment Lid Anti-theft Disarm Circuit Short to Ground	REM	REFER to Section 419-01A .
B1990	Pedal Forward/Rearward Potentiometer Feedback Circuit Failure	FEM	REFER to Section 206-00 .
B2078	Driver Airbag Deactivation Indicator Inoperative	RCM	REFER to Section 501-20B .
B2103	Antenna Not Connected	Instrument Cluster	REFER to Section 419-01B .
B2103	Antenna Not Connected	Navigation System Module	REFER to Section 419-07 .
B2112	Door Driver Set Switch Stuck Failure	DDM	REFER to Section 419-01A .
B2116	Door Driver Reset Switch Stuck Failure	DDM	REFER to Section 419-01A .
B2139	SCP Not Configured PCM ID Does Not Match	Instrument Cluster	REFER to Section 419-01B .
B2139	Data Mismatch	Navigation System Module	REFER to Section 419-07 .
B2141	NVM Configuration Failure	Instrument Cluster	REFER to Section 419-01B .

B2143	NVM Memory Failure	DSM	CARRY OUT seat calibration of the DSM. CLEAR the DTCs. REPEAT the self test. IF the DTC resets, INSTALL a new DSM. REFER to Driver Seat Module (DSM) in this section. CARRY OUT seat calibration of the new DSM.
B2143	NVM Memory Failure	Instrument Cluster	CARRY OUT seat calibration of the instrument cluster. CLEAR the DTCs. REPEAT the self test. IF the DTC resets, INSTALL a new instrument cluster. REFER to Section 413-01 . CARRY OUT seat calibration of the new DSM.
B2146	Seat Recline Motor Position Out of Range	DSM	REFER to Section 501-10 .
B2149	Seat Front Vertical Motor Position Out of Range	DSM	REFER to Section 501-10 .
B2152	Seat Rear Vertical Motor Position Out of Range	DSM	REFER to Section 501-10 .
B2155	Seat Horizontal Motor Position Out of Range	DSM	REFER to Section 501-10 .
B2158	Seat Recline Motor Memory Position Out of Range	DSM	REFER to Section 501-10 .
B2161	Seat Front Vertical Motor Memory Position Out of Range	DSM	REFER to Section 501-10 .
B2162	Data Mismatch No.2 (received data does not match what was expected)	Instrument Cluster	REFER to Section 413-01 .
B2164	Seat Rear Vertical Motor Memory Position Out of Range	DSM	REFER to Section 501-10 .
B2167	Seat Horizontal Motor Memory Position Out of Range	DSM	REFER to Section 501-10 .
B2172	Inertia Switch Input Circuit Open	REM	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
B2174	Window Driver Rear Remote Up Switch Short to Battery	REM	REFER to Section 501-11 .
B2178	Window Driver Rear Remote Down Switch Short to Battery	REM	REFER to Section 501-11 .
B2190	Window Passenger Rear Remote Up Switch Short to Battery	REM	REFER to Section 501-11 .
B2194	Window Passenger Rear Remote Down Switch Short to Battery	REM	REFER to Section 501-11 .
B2204	GPS Antenna Connection Open or Short	Navigation System Module	REFER to Section 419-07 .
B2208	Navigation to Head Unit Communication Error	Navigation System Module	REFER to Section 419-07 .
B2243	Driver Rear Door Ajar Circuit Open	REM	REFER to Section 417-02 .

B2245	Passenger Rear Door Ajar Circuit Open	REM	REFER to Section 417-02 .
B2290	Occupant Classification System Fault Front Passenger Side	RCM	REFER to Section 501-20B .
B2292	Restraint System Seatbelt Pretensioner Fault	RCM	REFER to Section 501-20B .
B2293	Restraint System Airbag Fault	RCM	REFER to Section 501-20B .
B2294	Restraint System Curtain Fault	RCM	REFER to Section 501-20B .
B2295	Restraint System Side Airbag Fault	RCM	REFER to Section 501-20B .
B2296	Restraint System Impact Sensor Fault	RCM	REFER to Section 501-20B .
B2312	Mirror Passenger Horizontal Sensor Circuit Failure	FEM	REFER to Section 501-09 .
B2316	Mirror Passenger Vertical Sensor Circuit Failure	FEM	REFER to Section 501-09 .
B2320	Mirror Driver Horizontal Feedback Potentiometer Circuit Failure	DDM	REFER to Section 501-09 .
B2324	Mirror Driver Vertical Feedback Potentiometer Circuit Failure	DDM	REFER to Section 501-09 .
B2328	Column Reach Feedback Potentiometer Circuit Failure	Instrument Cluster	REFER to Section 211-04 .
B2332	Column Tilt Feedback Potentiometer Circuit Failure	Instrument Cluster	REFER to Section 211-04 .
B2336	Mirror Switch Assembly Circuit Failure	DDM	REFER to Section 501-09 .
B2351	Steering Column Switch Signal Circuit Failure	Instrument Cluster	REFER to Section 211-04 .
B2358	Adjustable Pedal Switch Failure	FEM	REFER to Section 206-00 .
B2359	Accessory Delay Output Circuit Failure	DDM	REFER to Section 501-11 .
B2360	Window Motor Control Output Circuit Failure	DDM	REFER to Section 501-11 .
B2380	Heater Coolant Temperature Sensor Circuit Short to Ground	DATC	REFER to Section 412-00 .
B2381	Heater Coolant Temperature Sensor Circuit Open	DATC	REFER to Section 412-00 .
B2401	Audio Tape Deck Mechanism Fault	ACM	VERIFY that no tape is inserted in the ACM. CLEAR and DOCUMENT the DTCs. CARRY OUT the ACM On-Demand self-test. If DTC B2401 is retrieved again, REMOVE the ACM, REFER to Section 415-01 and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.
B2402	Audio CD/DJ Thermal Shutdown Fault	ACM	REFER to Section 415-00 .

B2403	Audio CD/DJ Internal Fault	ACM	REFER to Section 415-00 .
B2403	Audio CD/DJ Internal Fault	Navigation System Module	REFER to Section 419-07 .
B2404	Audio Steering Wheel Switch Circuit Fault	ACM	REFER to Section 415-00 .
B2404	Audio Steering Wheel Switch Circuit Fault	Navigation System Module	REFER to Section 419-07 .
B2405	Audio Single-Disc CD Player Thermal Shutdown Fault	ACM	REFER to Section 415-00 .
B2406	Audio Single-Disc CD Player Internal Fault	ACM	REFER to Section 415-00 .
B2425	Remote Keyless Entry Rolling Code Out of Synchronization	DDM	REFER to Section 501-14 .
B2426	Pass Solar Radiation Sensor Circuit Open	DATC	REFER to Section 412-00 .
B2427	Pass Solar Radiation Sensor Circuit Short to Ground	DATC	REFER to Section 412-00 .
B2428	A/C Post Heater Sensor No.2 Circuit Failure	DATC	REFER to Section 412-00 .
B2429	A/C Post Heater Sensor No.2 Circuit Short to Ground	DATC	REFER to Section 412-00 .
B2431	Transponder Programming Failed	Instrument Cluster	REFER to Section 419-01B .
B2434	Drivers Seat Belt Buckle Switch Circuit Short to Ground	RCM	REFER to Section 501-20B .
B2435	Drivers Seat Belt Buckle Switch Resistance Out of Range	RCM	REFER to Section 501-20B .
B2438	Passengers Seat Belt Buckle Switch Circuit Short to Ground	RCM	REFER to Section 501-20B .

Front Electronic Module (FEM)

Printable View (49 KB)

Refer to Wiring Diagrams Cell 59 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
Central junction box (CJB) fuses 20 (10A) and 30 (5A)
Wiring harness
Connector(s)
Circuitry

3. If an obvious cause for an observed or a reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition switch position.

5. If diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the data link diagnostics test. If the diagnostic tool responds with:

- SCP or UBP circuits fault; all electronic control units no response/not equipped, REFER to Section 418-00 .
- No response/not equipped for FEM, Go To Pinpoint Test A .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the DSM.

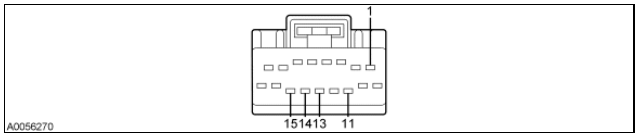
7. If the DTCs retrieved are related to the concern, go to the Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart
Connector Circuit Reference

Front Electronic Module (FEM) C201a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-DK22 (OG/WH) FEM voltage supply.	10 volts or greater at the FEM connector.
11	31-DK20A (BK/RD) FEM ground.	Less than 5 ohms between the FEM connector and ground.
13	31-DK20B (BK/RD) FEM ground.	Less than 5 ohms between the FEM connector and ground.
14	31-DK20C (BK/RD) FEM ground.	Less than 5 ohms between the FEM connector and ground.
15	31-DK20D (BK/RD) FEM ground.	Less than 5 ohms between the FEM connector and ground.

Front Electronic Module (FEM) C201c

	Circuit Designation/Description	Normal Condition/Measurement

Pin Number(s)		
6	29-DK20 (OG/GN) FEM voltage supply.	10 volts or greater at the FEM connector.
12	31-DK20 (BK/RD) FEM ground.	Less than 5 ohms between the FEM connector and ground.

Pinpoint Test A: No Communication With The Front Electronic Module (FEM)

Normal Operation

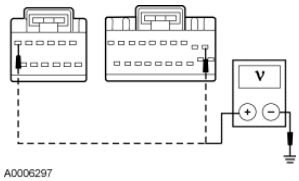
The FEM controls the RH exterior mirrors, the power adjustable pedals, both interior and exterior lighting active anti-theft functions, and the brake shift interlock. Power is supplied through the central junction box (CJB) fuse 20 (10A) and fuse 30 (5A) on circuits 29-DK20 (OG/GN), 29-DK22 (OG/WH) and grounded through circuit 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD), and 31-DK20D (BK/RD).

Possible Causes

- CJB fuse 20 (10A)
- CJB fuse 30 (5A)
- circuit 29-DK20 (OG/GN) open or shorted to ground
- circuit 29S-DK22 (OG/WH) open or shorted to ground
- circuit 31-DK20 (BK/RD) open
- circuit 31-DK20A (BK/RD) open
- circuit 31-DK20B (BK/RD) open
- circuit 31-DK20C (BK/RD) open
- circuit 31-DK20D (BK/RD) open
- FEM

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

Test Step	Result / Action to Take
A1 CHECK CIRCUIT 29-DK20 (OG/GN) AND 29S-DK21 (OG/WH) FOR VOLTAGE	
• Key in OFF position. • Disconnect: FEM C201a. • Disconnect: FEM C201c. • Key in ON position. • Measure the voltage between the FEM C201a-1, circuit 29S-DK22 (OG/WH), harness side and ground and between FEM C201c-6, circuit 29-DK20 (OG/GN), harness side and ground.	**Yes** GO to A2 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.



- **Are the voltages greater than 10 volts?**

A2 CHECK THE FEM GROUND CIRCUITS FOR AN OPEN	
• Key in OFF position. • Using the following table, measure the resistance between the FEM connector, harness side and ground: | Connector-Pin	Circuit | |---|---| | C201a-11 | 31-DK20A (BK/RD) | | C201a-13 | 31-DK20B (BK/RD) | | C201a-14 | 31-DK20C (BK/RD) | | C201a-15 | 31-DK20D (BK/RD) | | C201c-12 | 31-DK20 (BK/RD) |  • **Are the resistances less than 5 ohms?**	**Yes** REFER to Section 418-00 to diagnose the communication network. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

Rear Electronic Module (REM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC), located beneath the instrument panel, and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition switch position.

5. If diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:

- SCP or UBP circuits fault; all electronic control units, no response/not equipped, REFER to Section 418-00 .
- No response/not equipped for REM, Go To Pinpoint Test B .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM.

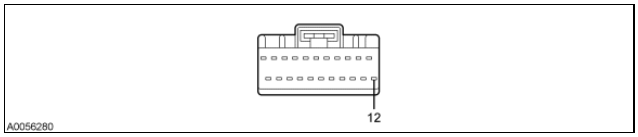
7. If the DTCs retrieved are related to the concern, go to the Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

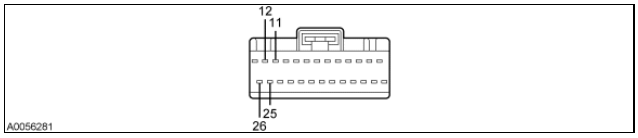
Symptom Chart
Connector Circuit Reference

Rear Electronic Module (REM) C420b



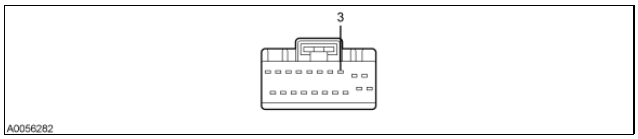
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	31-DK30H (BK/OG) REM ground	Less than 5 ohms between the REM connector and ground.

Rear Electronic Module (REM) C420c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	31-DK30D (BK/OG) REM ground.	Less than 5 ohms between the DSM connector and ground.
12	31-DK30E (BK/OG) REM ground.	Less than 5 ohms between the REM connector and ground.
25	31-DK30F (BK/OG) REM ground.	Less than 5 ohms between the REM connector and ground.
26	31-DK30G (BK/OG) REM ground.	Less than 5 ohms between the REM connector and ground.

Rear Electronic Module (REM) C420d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	29-DK31 (OG/BK) REM voltage supply.	10 volts or greater at the REM connector.

Pinpoint Test B: No Communication With The Rear Electronic Module (REM)

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

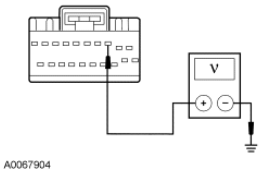
The exterior lights, interior lights, and active anti-theft functions are controlled by the REM. Power is supplied through central junction box (CJB) fuse 20 (10A) on circuit 29-DK31 (OG/BK), and grounded through circuit 31-DK30D (BK/OG), 31-DK30E (BK/OG), 31-DK30F (BK/OG), 31-DK30G (BK/OG) and 31-DK30H (BK/OG).

Possible Causes

- CJB fuse: 20 (10A)
- circuit 29-DK31 (OG/BK) open or shorted to ground
- circuit 31-DK30D (BK/OG) open
- circuit 31-DK30E (BK/OG) open
- circuit 31-DK30F (BK/OG) open
- circuit 31-DK30G (BK/OG) open
- circuit 31-DK30H (BK/OG) open
- REM

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

Test Step	Result / Action to Take
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
• Key in OFF position. • Disconnect: REM C420d. • Key in ON position. • Measure the voltage between the REM C420d-3, circuit 29-DK31 (OG/BK), harness side and ground.	**Yes** GO to B2 . **No** REPAIR the supply circuit. CLEAR the DTCs. REPEAT the self-test.

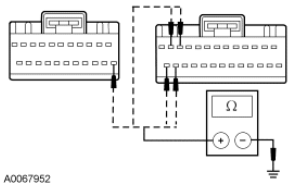


- **Is the voltage greater than 10 volts?**

B2 CHECK THE REM GROUND CIRCUITS FOR AN OPEN

- Disconnect: REM C420b.
- Disconnect: REM C420c.
- Key in OFF position.
- Use the following table to measure the resistance between the REM connector, harness side and ground:

Pin	Circuit
C420b-12	31-DK30H (BK/OG)
C420c-11	31-DK30D (BK/OG)
C420c-12	31-DK30E (BK/OG)
C420c-25	31-DK30F (BK/OG)
C420c-26	31-DK30G (BK/OG)



- **Are the resistances less than 5 ohms?**

Yes
REFER to Section 418-00 to diagnose the communication network.

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition switch position.

5. If diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:

- SCP or UBP circuits fault; all electronic control units, no response/not equipped, REFER to Section 418-00 .
- No response/not equipped for DDM, Go To Pinpoint Test C .
- System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the DSM.

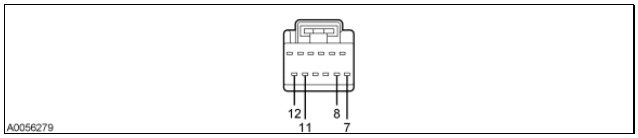
7. If the DTCs retrieved are related to the concern, go to the Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Symptom Chart

Symptom Chart
Connector Circuit Reference

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	91-AJ80 (BN/BU) DDM ground	Less than 5 ohms between the DDM connector and ground.
8	31-AJ80B (BK/OG) DDM ground	Less than 5 ohms between the DDM connector and ground.
11	29-AJ80 (OG) DDM voltage supply	10 volts or greater at the DDM connector.
12	29S-AJ86 (OG/BU) DDM voltage supply	10 volts or greater at the DDM connector.

Pinpoint Test C: No Communication With The Driver Door Module (DDM)

Normal Operation

The LH exterior mirror, remote keyless entry, and power locks are controlled by the DDM. Voltage is supplied through central junction box (CJB) fuses 7 (5A) and 22 (10A) on circuits 29-AJ80 (OG) and 29S-AJ86 (OG/BU) and grounded through circuits 91-AJ80 (BN/BU) and 31-AJ80B (BK/OG).

Possible Causes

- CJB fuses:

- ♦ 7 (5A)
- ♦ 22 (10A)

- circuit 29-AJ80 (OG) open or shorted to ground
- circuit 29S-AJ86 (OG/BU) open or shorted to ground
- circuit 91-AJ80 (BN/BU) open
- circuit 31-AJ80B (BK/OG) open

PINPOINT TEST C: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

Test Step	Result / Action to Take
C1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
• Key in OFF position. • Disconnect: DDM C501a. • Key in ON position. • Measure the voltage between the DDM C501a-11, circuit 29-AJ80 (OG), harness side and ground and between the DDM C501a-12, circuit 29S-AJ86 (OG/BU), harness side and ground.  A0067905 • **Are the voltages greater than 10 volts?**	**Yes** GO to C2 . **No** REPAIR the supply circuit in question. CLEAR teh DTCs. REPEAT the self-test.
C2 CHECK CIRCUITS 91-AJ80 (BN/BU) AND 31-AJ80B (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the DDM C501a-7, circuit 91-AJ80 (BN/BU), harness side and ground; and between the DDM C501a-8, circuit 31-AJ80B (BK/OG), harness side and ground.  A0067906 • **Is the resistance less than 10 ohms?**	**Yes** REFER to Section 418-00 to diagnose the communication network. **No** REPAIR the circuit in question. CLEAR teh DTCs. REPEAT the self-test.

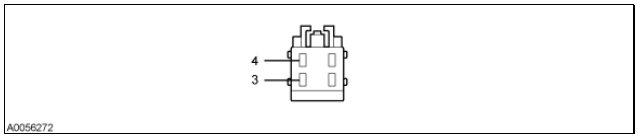
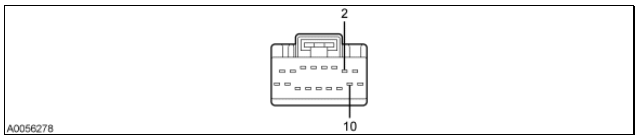
Driver Seat Module (DSM) C341b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31-AH80 (BK) DSM ground	Less than 5 ohms between the DSM connector and ground.
4	30-AH80 (RD) DSM voltage supply	10 volts or greater at the DSM connector.

Driver Seat Module (DSM) C341c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	91-AH80 (BN/WH) DSM ground.	Less than 5 ohms between the DSM connector and ground.
10		10 volts or greater at the DSM connector.

	29-AH80 (OG/WH) DSM voltage supply.	

Pinpoint Test D No Communication With The Driver Seat Module (DSM)

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation

The power driver seat is controlled by the DSM. Voltage is supplied through central junction box (CJB) fuse 7 (5A) and battery junction box (BJB) fuse 21 (20A) on circuits 29-AH80 (OG/WH) and 30-AH80 (RD). The DSM is grounded through circuits 31-AH80 (BK) and 91-AH80 (BN/WH).

Possible Causes

- CJB fuse: 7 (5A)
- BJB fuse 21 (20A)
- circuit 29-AH80 (OG/WH) open or shorted to ground
- circuit 30-AH80 (RD) open or shorted to ground
- circuit 31-AH80 (BK) open
- circuit 91-AH80 (BN/WH) open

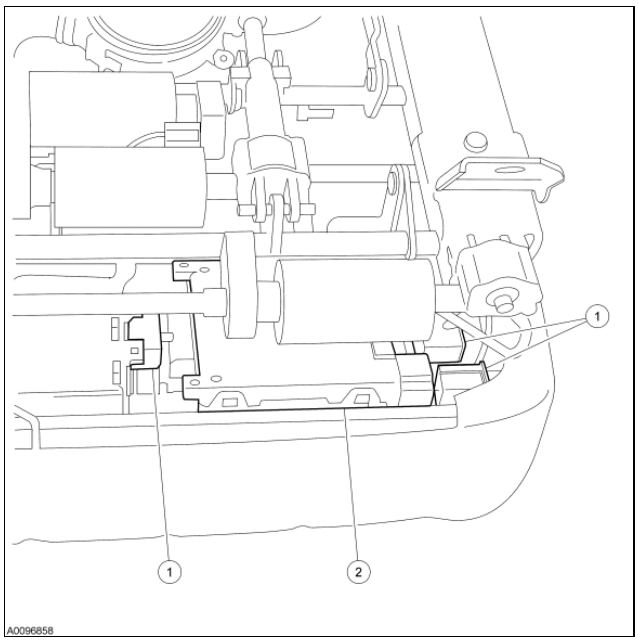
PINPOINT TEST D: NO COMMUNICATION WITH THE DRIVER SEAT MODULE (DSM)

Test Step	Result / Action to Take
D1 CHECK CIRCUIT 29-AH80 (OG/WH) AND 30-AH80 (RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: DSM C341b. • Disconnect: DSM C341c. • Key in ON position. • Measure the voltage between the DSM C341b-4, circuit 30-AH80 (RD), harness side and ground and between the DSM C341c-10, circuit 29-AH80 (OG/WH), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to D2 . **No** REPAIR the supply circuit in question. CLEAR the DTCs. REPEAT the self-test.
D2 CHECK CIRCUITS 31-AH80 (BK) AND 91-AH80 (BN/WH) FOR AN OPEN	
• Measure the resistance between the DSM C341b-3, circuit 31-AH80 (BK), harness side and ground; and between the DSM C341c-2, circuit 91-AH80 (BN/WH), harness side and ground.	**Yes** REFER to Section 418-00 . **No** REPAIR the circuit in

 • **Are the resistances less than 5 ohms?**	question. CLEAR the DTCs. REPEAT the self-test.

Driver Seat Module (DSM)

Printable View (115 KB)



Item	Part Number	Description
1		DSM electrical connectors
2	13C789	DSM

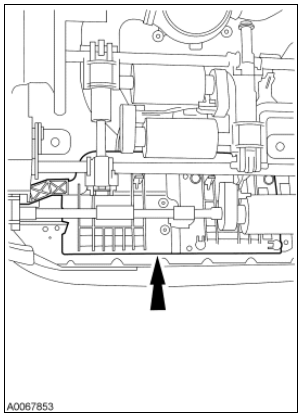
Removal and Installation

1. **⚠ CAUTION: Prior to the removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .**

   ⚠ CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

   Remove the driver seat. For additional information, refer to Section 501-10 .

2. Remove the shield.



3. Disconnect the 3 DSM electrical connectors.

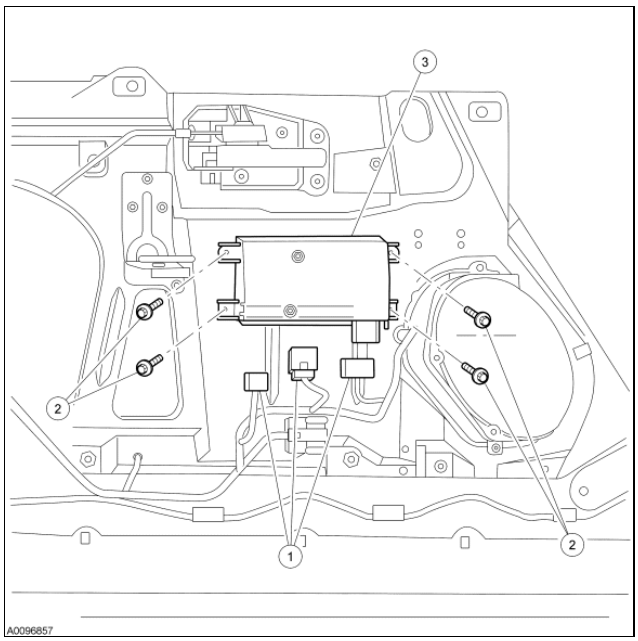
4. Slide the DSM out of the bracket and remove the DSM.

5. **NOTE:** Once the DSM is installed, it is necessary to download the module configuration information from the diagnostic tool into the new module. For additional information, refer to Section 418-01 .

   To install, reverse the removal procedure.

Driver Door Module (DDM)

Printable View (109 KB)



Item	Part Number	Description
1		DDM electrical connectors
2		DDM bolts (4 required)
3	13C791	DDM

Removal and Installation

1. **CAUTION: Prior to the removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .**

   CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

   Remove the driver door trim panel. For additional information, refer to Section 501-05 .

2. Disconnect the 3 DDM electrical connectors.

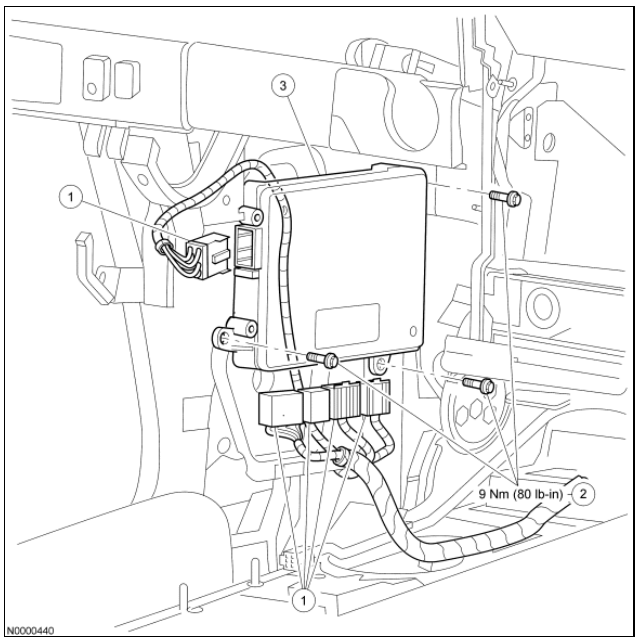
3. Remove the 4 bolts and the DDM.

4. **NOTE:** Once the DDM is installed, it is necessary to download the module configuration information from the diagnostic tool into the new module. For additional information, refer to Section 418-01 .

   To install, reverse the removal procedure.

Front Electronic Module (FEM)

Printable View (219 KB)



Item	Part Number	Description
1		FEM electrical connectors
2		FEM bolts (3 required)
3	14B205	FEM

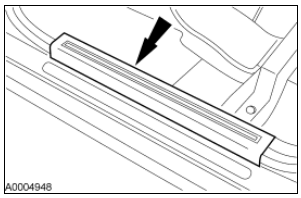
Removal and Installation

1. **CAUTION: Prior to the removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .**

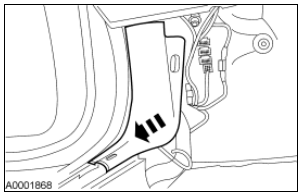
   CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

   Disconnect the battery. For additional information, refer to Section 414-01 .

2. Remove the LH scuff plate.

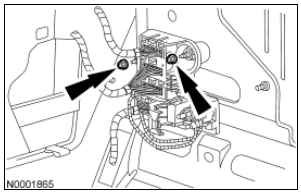


3. Remove the LH A-pillar lower trim panel.



4. Position the carpet aside.

5. Remove the 2 nuts and position the auxiliary junction box aside.



6. Disconnect the 5 FEM electrical connectors.

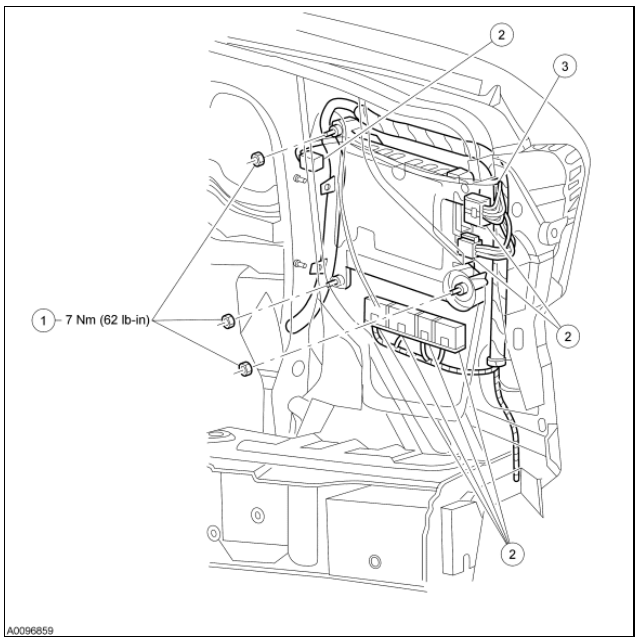
7. Remove the 3 FEM bolts and the FEM.
   - To install, tighten to 9 Nm (80 lb-in).

8. **NOTE:** Once the FEM is installed, it is necessary to download the module configuration information from the diagnostic tool into the new module. For additional information, refer to Section 418-01 .

   To install, reverse the removal procedure.

Rear Electronic Module (REM)

Printable View (130 KB)



Item	Part Number	Description
1		REM nuts (3 required)
2		REM electrical connectors
3	13C788	REM

Removal and Installation

1. **CAUTION: Prior to the removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .**

   CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

   Disconnect the battery. For additional information, refer to Section 414-01 .

2. Position the RH rear luggage compartment trim panel aside.

3. Remove the 3 REM nuts.
   - To install, tighten to 7 Nm (62 lb-in).

4. **NOTE:** It may be necessary to position the REM rearward to access some of the connectors.

   Disconnect the 7 REM electrical connectors.

5. Remove the REM.

6. **NOTE:** Once the REM is installed, it is necessary to download the module configuration information from the diagnostic tool into the new module. For additional information, refer to Section 418-01 .

To install, reverse the removal procedure.

Electronic Compass

Printable View (7 KB)

The compass display and module are an integral part of the interior rear view mirror. A 1 or 2 character display located in the upper right hand side of the mirror indicates the current direction of the vehicle (N, NE, E, SE, S, SW, W, NW). The compass continuously recalibrates due to changes in the magnetic field and remains accurate during most driving conditions.

Electronic Compass

Printable View (52 KB)

Refer to Wiring Diagrams Cell 125 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

The compass is self-calibrating. This eliminates the need to manually set the compass. If the compass is displaying a heading and not displaying C or CAL, the compass is in auto-calibration mode. In this mode, the compass automatically calibrates for changes in vehicle magnetics over the life of the vehicle. This auto-calibration mode assures the compass heading is always accurate.

A display of C or CAL indicates the compass requires calibration. The compass may temporarily display C or CAL if the vehicle characteristics have changed (carwash, collision or other factors.). Compass adjustment is controlled by the COMP switch which provides access to the calibration and zone adjustment procedures.

Excessive magnetism in or near the vehicle may cause the compass to display ALL SEGMENTS. In order to distinguish between vehicle magnetics and surrounding magnetics, drive the vehicle to an area that is free from large metal objects. Cycling the ignition switch ON and OFF resets the compass. A display of ALL SEGMENTS within 20 seconds indicates excessive vehicle magnetism and the vehicle should be demagnetized. For additional information, refer to Vehicle Demagnetizing in this section.

Inspection and Verification

1. Verify the customer concern by operating the vehicle along roads of known direction to duplicate the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Interior rear view mirror	• Central junction box (CJB) fuse 12 (5A) • Microphone • Circuitry • Compass sensor (integral to the interior rear view mirror)

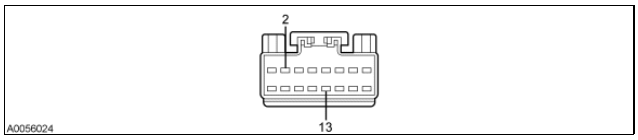
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, verify the symptom and GO to Symptom Chart .

Symptom Chart

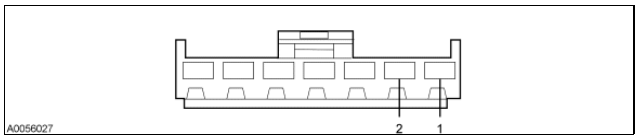
Symptom Chart
Connector Circuit Reference

Interior Rear View Mirror C911



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AD15 (BK/OG) ground	0 volts, less than 5 ohms to ground.
13	75-AD15 (YE/BU) switched B+ voltage feed	Greater than 10 volts with the ignition switch in the ON or ACC position.

Interior Rear View Mirror C9012



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	75-AD15 (YE/BU) switched B+ voltage feed	Greater than 10 volts with ignition switch in the ON or ACC position.
2	31-AD15 (BK/OG) ground	0 volts, less than 5 ohms to ground.

Pinpoint Test A: The Compass Is Inoperative

Normal Operation

The compass display and module are integrated into the interior rear view mirror. The interior rear view mirror receives switched B+ voltage through circuit 75-AD15 (YE/BU). Circuit 31-AD15 (BK/OG) provides the mirror ground.

Possible Causes

- circuit 75-AD15 (YE/BU) open, or short to ground
- circuit 31-AD15 (BK/OG) open
- interior rear view mirror

PINPOINT TEST A: THE COMPASS IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK THE VEHICLE OPTIONS	
• Check the vehicle options. • **Is the vehicle equipped with navigation?**	**Yes** GO to A2 . **No** GO to A4 .
A2 CHECK CIRCUIT 75-AD15 (YE/BU) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Interior Rear View Mirror C911. • Key in ON position. • Measure the voltage between the interior rear view mirror C911-13, circuit 75-AD15 (YE/BU), harness side and ground.  A0056581 • **Is the voltage greater than 10 volts?**	**Yes** GO to A3 . **No** REPAIR the circuit. TEST the system for normal operation.
A3 CHECK CIRCUIT 31-AD15 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the interior rear view mirror C911-2, circuit 31-AD15 (BK/OG), harness side and ground.  A0056582 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new interior rear view mirror. REFER to Section 501-09 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A4 CHECK CIRCUIT 75-AD15 (YE/BU) FOR VOLTAGE AUTO-DIMMING INTERIOR REAR VIEW MIRROR	
• Key in OFF position. • Disconnect: Interior Rear View Mirror C9012. • Key in ON position.	**Yes** GO to A5 . **No** REPAIR the circuit. TEST the system

• Measure the voltage between the interior rear view mirror C9012-1, circuit 75-AD15 (YE/BU), harness side and ground.  A0056821 • **Is the voltage greater than 10 volts?**	for normal operation.
A5 CHECK CIRCUIT 31-AD15 (BK/OG) FOR AN OPEN AUTO-DIMMING INTERIOR REAR VIEW MIRROR	
• Key in OFF position. • Measure the resistance between the interior rear view mirror C9012-2, circuit 31-AD15 (BK/OG), harness side and ground.  A0056822 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new interior rear view mirror. REFER to Section 501-09 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test B: The Compass Is Inaccurate

Normal Operation

The compass display and module are integrated into the interior rear view mirror. The compass adjustment and zone variation are controlled by the COMP switch on the mirror.

Possible Causes

- compass zone setting
- compass zone adjustment
- interior rear view mirror

PINPOINT TEST B: THE COMPASS IS INACCURATE

Test Step	Result / Action to Take
B1 CHECK THE COMPASS ZONE ADJUSTMENT	
• Carry out the compass zone adjustment procedure. Refer to Compass Zone Adjustment in this section. • **Is the compass zone set correctly?**	**Yes** GO to B2 . **No** INSTALL a new interior rear view mirror. REFER to Section 501-09 . TEST the system for normal operation.
B2 CALIBRATE THE COMPASS	

<table>
<tr><td>• Carry out the compass calibration adjustment procedure. Refer to Compass Calibration in this section.
• Does the compass calibrate correctly?</td><td>Yes
GO to B4 .

No
GO to B3 .</td></tr>
<tr><td>B3 DEMAGNETIZE THE VEHICLE</td><td></td></tr>
<tr><td>• Demagnetize the vehicle. Refer to Vehicle Demagnetizing in this section.
• Does the compass calibrate correctly?</td><td>Yes
GO to B4 .

No
INSTALL a new interior rear view mirror. REFER to Section 501-09 . TEST the system for normal operation.</td></tr>
<tr><td>B4 CHECK THE VEHICLE ACCURACY</td><td></td></tr>
<tr><td>• Position the vehicle and observe the compass display as follows:

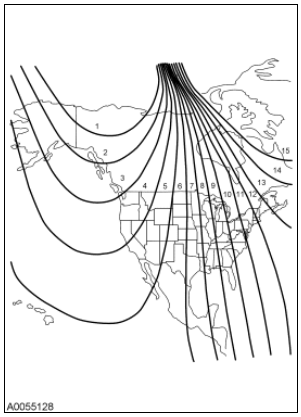
<table><tr><th>Direction</th><th>Compass Display</th></tr><tr><td>North</td><td>N</td></tr><tr><td>Northeast</td><td>NE</td></tr><tr><td>East</td><td>E</td></tr><tr><td>Southeast</td><td>SE</td></tr><tr><td>South</td><td>S</td></tr><tr><td>Southwest</td><td>SW</td></tr><tr><td>West</td><td>W</td></tr><tr><td>Northwest</td><td>NW</td></tr></table>
• Does the compass calibrate correctly?</td><td>Yes
The compass is operating correctly.

No
INSTALL a new interior rear view mirror. Refer to Section 501-09 . TEST the system for normal operation.</td></tr>
</table>

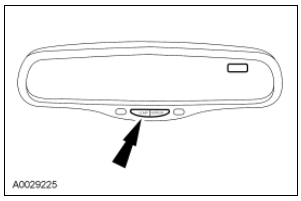
Compass Zone Adjustment

Printable View (53 KB)

1. Refer to the compass calibration zone map to select the correct compass zone setting for your geographical location.



2. With the compass display turned on, press and hold the COMP button (for 3 seconds) until the display shows the current zone of operation.



3. Release the button.

4. Press the COMP button repeatedly to cycle the zone number display. Set the zone display number to match the vehicle location on the compass calibration zone map.

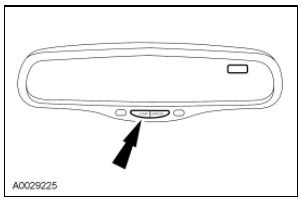
5. Releasing the switch for 10 seconds exits the zone setting mode.

Compass Calibration

Printable View (15 KB)

1. **NOTE:** For optimum calibration, drive to an open, level location away from large metallic objects or structures. Switch off all non-essential electrical accessories (rear window defrost, heater, A/C, map lamps and wipers) and make sure all doors are shut.

   Press and hold the COMP button until C or CAL is displayed (6 seconds). Release the COMP button.



2. Drive the vehicle at less than 8 km/h (5 mph) in a continuous circle until the compass heading is shown.

3. If the C or CAL message does not turn off within 5 circles, demagnetize the vehicle. For additional information, refer to Vehicle Demagnetizing in this section.

Vehicle Demagnetizing

Printable View (10 KB)

⚠ CAUTION: During demagnetizing, the demagnetizer coil is pulled toward the vehicle. Place a cloth over the vehicle roof to protect the vehicle surface if contact occurs. Make sure the cloth covers the front third and the entire width of the roof.

NOTE: The demagnetizing process requires the use of a demagnetizing coil commonly used by television repair technicians to demagnetize television tubes.

NOTE: To demagnetize, use a constant circular motion over the vehicle roof. Do not turn off the demagnetizer while sweeping the vehicle roof to prevent remagnetizing ferrous materials contained in the vehicle.

NOTE: During the demagnetizing process, make sure the phenolic surface of the tool (the side opposite the handle) is closest to the vehicle surface.

NOTE: Turn the ignition switch to the OFF position.

1. Demagnetize the front third of the vehicle roof.
    1. Turn on the demagnetizer at least 1 meter (3 feet) away from the vehicle.
    2. Holding the demagnetizer no more than 2.5 cm (1 inch) from the roof, and starting on the passenger side, demagnetize the front third of the roof closest to the windshield using a constant circular motion. Keep the circle's radius within 30 cm (12 inches) while sweeping across the entire surface of the roof closest to the windshield. Continue the circular motion 4 times.
    3. After the fourth pass and without stopping, move the demagnetizer at least 1 meter (3 feet) away from the vehicle.
    4. Turn the demagnetizer off.
2. **NOTE:** The demagnetizer must be located over the exterior of the windshield no greater than 2.5 cm (1 inch).

   Demagnetize the interior rear view mirror mounting pad.

    1. Turn on the demagnetizer at least 1 meter (3 feet) away from the vehicle.
    2. Using a circular motion, pass the demagnetizer over the exterior of the windshield near the interior rear view mirror mounting pad. Without stopping, move the demagnetizer at least 1 meter (3 feet) away from the vehicle.
    3. Turn the demagnetizer off.
3. Carry out the compass zone adjustment procedure. For additional information, refer to Compass Zone Adjustment in this section.
4. Carry out the calibration adjustment procedure. For additional information, refer to Compass Calibration in this section.
